Laboratory Name:	Northeast Analytical, Inc.	SDG No:	09080223
ELAP ID No:	11078	LRF ID:	09080223-34
Matrix:	Sediment	Client ID:	SS-SEDIMENT-17B-090818
Sample wt(Dry)/vol:	5.7251 g	Lab Sample ID:	AM13866
Percent Moisture:	72.2	Lab File ID:	GC27B-126-18
Extraction:	Accelerated Solvent Extraction	Date Received:	08/18/2009
Conc. Extract Volume:	10000 uL	Date Extracted:	08/26/2009
Injection Volume:	1.0 uL	Date Analyzed:	08/29/2009
Method:	GEHR METHOD 8082 (PCB)	Dilution Factor:	100
GC Column:	PHENOMENEX, NARROWBORE CAPILLARY, ZB-1, 30M; ID: 0.25 mm	Sulfur Cleanup:	YES

CAS NO	COMPOUND NAME	CONCENTRATION MG/KG	Q
12674-11-2	Aroclor - 1016	1.4	U
11104-28-2	Aroclor - 1221	100	
11141-16-5	Aroclor - 1232	1.4	U
53469-21-9	Aroclor - 1242	21	
12672-29-6	Aroclor - 1248	1.4	U
11097-69-1	Aroclor - 1254	1.4	U
11096-82-5	Aroclor - 1260	1.4	U
1336-36-3	Total PCBs	121	

Laboratory Qualifiers:
U - Denotes analyte not detected at concentration greater than or equal to the Method Detection Limit (MDL). MDLs are adjusted for sample weight/volume and dilution factors.

[1] Response factor calculated using total area of 5 peaks used to quantitate each Aroclor. Mean response factor not used in Aroclor quantitation, calibration curve by linear regression used for quantitation. Concentrations are nominal values, please see Calibration Curve Report Point Table for actual values.

Note : Response factor calculated using total area of 5 peaks. A single point standard is used to quantitate Aroclor 1016, Aroclor 1232, Aroclor 1248, and Aroclor 1260.

[1] Response factor calculated using total area of 5 peaks used to quantitate each Aroclor. Mean response factor not used in Aroclor quantitation, calibration curve by linear regression used for quantitation. Concentrations are nominal values, please see Calibration Curve Report Point Table for actual values.

Note : Response factor calculated using total area of 5 peaks. A single point standard is used to quantitate Aroclor 1016, Aroclor 1232, Aroclor 1248, and Aroclor 1260.

7E-2
PCB CALIBRATION VERIFICATION SUMMARY

Laboratory Name: Northeast Analytical, Inc. SGD NO: 09080223

ELAP ID No: 11078

Instrument ID: GC27B

GC Column: PHENOMENEX, NARROWBORE CAPILLARY, ZB-1, 30M; ID: 0.25 mm

COMPOUND	Lab File ID	NEA Sample ID	CALIB TYPE *	PEAK	RT	RT WINDOW FROM	RT WINDOW TO
Aroclor 1254			CCV	4	14.79	14.70	14.86
			CCV	5	15.61	15.52	15.68

* ICV = Initial Calibration Verification
CCV = Continuing Calibration Verification

Northeast Analytical, Inc.

Date: 03/26/2009

Method Detection Limits

METHOD DETECTION LIMIT STUDY

Method Detection Limit (MDL) calculations as based on procedures outlined in 40 CFR, part 136, App B; 1-July-85.

Compound:	Aroclor 1016	Analysis:	SW-846 8082
Matrix:	Solid	Instrument:	GC-27F
Extraction:	Ase	Column:	DB-1
Spike conc:	0.015 mg/Kg	Detector:	ECD

	NEA Sample ID	Extraction Date	File Name	Analysis Date	Measured Concentration mg/Kg	Percent Recovery (%)	
1	AM01186	02/11/2009	1016/1260 #1 ASE	03/23/2009	0.0149	99.0%	
2	AM01187	02/11/2009	1016/1260 #2 ASE	03/23/2009	0.0144	95.9%	
3	AM01188	02/11/2009	1016/1260 #3 ASE	03/23/2009	0.0151	101%	
4	AM01189	02/11/2009	1016/1260 #4 ASE	03/23/2009	0.0152	101%	
5	AM01190	02/11/2009	1016/1260 #5 ASE	03/23/2009	0.0138	92.0%	
6	AM01191	02/11/2009	1016/1260 #6 ASE	03/23/2009	0.0156	104%	
7	AM01192	02/11/2009	1016/1260 #7 ASE	03/23/2009			drop out of MDL
8	AM01193	02/11/2009	1016/1260 #8 ASE	03/23/2009	0.0148	98.7%	

One sided Student's t values (t) at the 99% confidence level.	
Number (n)	(t) value
7	3.143
8	2.998

Number (n):	7	
AVG:	0.0148	mg/Kg
STD (s):	0.000579	mg/Kg
%RSD:	3.91%	
MDL:	0.00182	mg/Kg
PQL:	0.00910	mg/Kg
VALID:	valid	

Comments: Replicate #7 was omitted due to low surrogate recovery that was below lab-established quality control limits and is indicative of a low-biased sample extraction.

MDL & PQL calculations:

MDL = t * s

Where:

t = one sided Student's t value for the number of replicates at the 99% level

s = standard deviation of the population

PQL = MDL * 5

Number (n):	7
AVG:	0.0130 mg/Kg
STD (s):	0.000790 mg/Kg
%RSD:	6.06%
MDL:	0.00248 mg/Kg
PQL:	0.0124 mg/Kg
VALID:	valid

One sided Student's t values (t) at the 99% confidence level.

Number (n)	(t) value
7	3.143
8	2.998

Comments: Replicate #7 was omitted due to low surrogate recovery that was below lab-established quality control limits and is indicative of a low-biased sample extraction.

MDL & PQL calculations:

MDL = t * s

Where:

t = one sided Student's t value for the number of replicates at the 99% level

s = standard deviation of the population

PQL = MDL * 5

CASE NARRATIVE

This data package (NEA SDG ID: 09080358) consists of 9 sediment samples received on 08/27/2009. The samples are from Project Name: HUDSON RIVER RAMP.

This sample delivery group consists of the following samples:

Lab Sample ID	Client ID	Collection Date
AM14884	SSSED-WRI-1A-090827-UT001	08/27/2009 09:42
AM14885	SSSED-WRI-2A-090827-UT001	08/27/2009 09:37
AM14886	SSSED-WRI-3A-090827-UT001	08/27/2009 09:30
AM14887	SSSED-WRI-4A-090827-UT001	08/27/2009 10:03
AM14888	SSSED-WRI-5A-090827-UT001	08/27/2009 09:56
AM14889	SSSED-WRI-6A-090827-UT001	08/27/2009 09:50
AM14890	SSSED-WRI-7A-090827-UT001	08/27/2009 09:05
AM14891	SSSED-WRI-8A-090827-UT001	08/27/2009 10:11
AM14892	SSSED-WRI-9A-090827-UT001	08/27/2009 09:18

Sample Delivery and Receipt Conditions

(1.) Northeast Analytical provided sample pickup service on 08/27/2009.

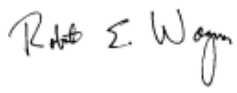
(2.) All samples were received at the laboratory intact and within holding times.

(3.) The following cooler temperature was recorded at sample receipt: 4.4 degrees Celsius. Please see Chain of Custody for details.

Mass of Solids for Sediments

Mass of solids was performed by NEA Method SOP NE277_01.

Respectfully submitted,



Robert E. Wagner
Laboratory Director & Founder

CASE NARRATIVE

This data package (NEA SDG ID: 09090059) consists of 8 sediment samples received on 9/4/2009. The samples are from Project Name: HUDSON RIVER RAMP.

This sample delivery group consists of the following samples:

Lab Sample ID	Client ID	Collection Date
AM15484	SSSED-WRI-1A-090904-UT001	9/4/2009 11:39
AM15485	SSSED-WRI-2A-090904-UT001	9/4/2009 11:45

AM15491	SSSED-WRI-8A-090904-UT001	9/4/2009 10:41

Sample Delivery and Receipt Conditions

(1.) Northeast Analytical provided sample pickup service on 9/4/2009.

(2.) All samples were received at the laboratory intact and within holding times.

(3.) The following cooler temperature was recorded at sample receipt: 3.3 degrees Celsius. Please see Chain of Custody for details.

Mass of Solids for Sediments

Mass of solids was performed by NEA Method SOP NE277_01.

CASE NARRATIVE

This data package (NEA SDG ID: 09090138) consists of 9 sediment samples received on 09/11/2009. The samples are from Project Name: HUDSON RIVER RAMP.

This sample delivery group consists of the following samples:

Lab Sample ID	Client ID	Collection Date
AM16203	SSSED-WRI-1A-090911-UT001	09/11/2009 10:37
AM16204	SSSED-WRI-2A-090911-UT001	09/11/2009 10:43
AM16205	SSSED-WRI-3A-090911-UT001	09/11/2009 10:51

AM16209	SSSED-WRI-7A-090911-UT001	09/11/2009 10:25
AM16210	SSSED-WRI-8A-090911-UT001	09/11/2009 10:24
AM16211	SSSED-WRI-9A-090911-UT001	09/11/2009 11:24

Sample Delivery and Receipt Conditions

(1.) Northeast Analytical provided sample pickup service on 09/11/2009.

(2.) All samples were received at the laboratory intact and within holding times. Chain of Custody listed matrix for these samples as water, this was changed to sediment by the laboratory.

(3.) The following cooler temperature was recorded at sample receipt: 6.8 degrees Celsius. Please see Chain of Custody for details.

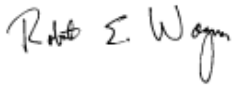
Mass of Solids for Sediments

Mass of solids was performed by NEA Method SOP NE277_01. The following was noted for the analysis:

(1.) All quality assurance parameters were met for the analysis.

(2.) Sample weights were manually input for samples SSSED-WRI-7A-090911-UT001and SSSED-WRI-9A-090911-UT001 using the 2 kg capacity top-loading balance due to the high mass of the samples which exceeded the interfaced balance's range. The Practical Quantitaion Limits were adjusted to 0.01 g to reflect the balance precision.

Respectfully submitted,



Robert E. Wagner
Laboratory Director & Founder

CASE NARRATIVE

This data package (NEA SDG ID: 09090201) consists of 18 soil samples received on 9/16/2009. The samples are from Project Name: HUDSON RIVER RAMP.

This sample delivery group consists of the following samples:

Lab Sample ID	Client ID	Collection Date
AM16700	SSSED-WRI-1A-090916-UT001	9/16/2009 10:50
AM16701	SSSED-WRI-1B-090916-UT001	9/16/2009 10:50
AM16702	SSSED-WRI-2A-090916-UT001	9/16/2009 10:58
AM16703	SSSED-WRI-2B-090916-UT001	9/16/2009 10:59
AM16704	SSSED-WRI-3A-090916-UT001	9/16/2009 11:11
AM16705	SSSED-WRI-3B-090916-UT001	9/16/2009 11:11
AM16706	SSSED-WRI-4A-090916-UT001	9/16/2009 09:47
AM16707	SSSED-WRI-4B-090916-UT001	9/16/2009 09:48
AM16708	SSSED-WRI-5A-090916-UT001	9/16/2009 09:52
AM16709	SSSED-WRI-5B-090916-UT001	9/16/2009 09:53
AM16710	SSSED-WRI-6A-090916-UT001	9/16/2009 11:54
AM16711	SSSED-WRI-6B-090916-UT001	9/16/2009 10:31
AM16712	SSSED-WRI-7A-090916-UT001	9/16/2009 11:38
AM16713	SSSED-WRI-7B-090916-UT001	9/16/2009 11:38
AM16714	SSSED-WRI-8A-090916-UT001	9/16/2009 11:32
AM16715	SSSED-WRI-8B-090916-UT001	9/16/2009 11:33
AM16716	SSSED-WRI-9A-090916-UT001	9/16/2009 11:45
AM16717	SSSED-WRI-9B-090916-UT001	9/16/2009 11:46

Sample Delivery and Receipt Conditions

(1.) Northeast Analytical provided sample pickup service on 9/16/2009.

(2.) All samples were received at the laboratory intact and within holding times.

(3.) The following cooler temperature was recorded at sample receipt: 10.2 degrees Celsius; which exceeds the six degree temperature limit. Samples were collected and received at the laboratory on the same day and ice was present in the cooler. Please see Chain of Custody for details.

PCB Aroclor Analysis

Analysis for PCB Aroclors was performed by GEHR Method 8082. Samples were extracted by Accelerated Solvent Extraction (EPA Method 3545). The following technical and administrative items were noted for the analysis:

(1.) The surrogates DCBP and TCMX were diluted out for several samples (NEA ID: AM16701, AM16705, AM16707, AM16709, AM16711, AM16713, AM16715, and AM16717) due to the high concentration of PCB in the samples. Please see associated Form 2 for details.

(2.) Sample SSSED—WRI-2B-090916-UT001 (NEA ID: AM16703) was received with approximately 1.5 grams of material which is significantly less that the usual 10 gram minimum extraction mass. Client was contacted and directed the lab to proceed with the analysis using the limited mass available.

Total Organic Carbon Analysis

Analysis for Total Organic Carbon was performed by EPA Lloyd Kahn Method for solid samples. The following technical and administrative items were noted for the analysis:

(1.) All quality assurance parameters were met for the analysis.

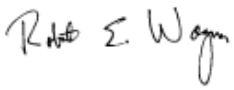
Mass of Solids for Sediments

(1.) Mass of solids was performed by NEA Method SOP NE277_01.

Qualifier Summary

(1.) B-Denotes analyte observed in associated method blank at a concentration exceeding the MDL.
(2.) J-Denotes concentration result greater than the MDL but less than the PQL.
(3.) U-Denotes analyte not observed at a concentration greater than the MDL.

Respectfully submitted,



Robert E. Wagner
Laboratory Director & Founder

Curve: GC27F_071409

Sample Calculation

First Order (1/X) Weighted Linear Regression with intercept (Initial Calibration)

$Y = A + (B * x)$

Y = Response µV-sec (sum of 5 quant peaks)
A = Constant (intercept) µV-sec
B = First Order Coefficient (slope)
x = Solution Concentration (ng/mL)

For Aroclor 1221

A = 23.647089
B = 12.434647

$$X = \frac{Y - 23.647089}{12.434647}$$

For Sample NEA ID: AM16701

Aroclor 1221 Y = 4571.4693 µV * sec

$$X = \frac{4571.4693 - 23.647089}{12.434647} = 365.7379 \text{ ng/mL}$$

$$\text{Final Concentration} = \frac{(x)(v_t)(D.F.)(1/1000)}{(M)(\%solid/100)}$$

v_t = Extract Volume (mL)
D.F. = Analytical Dilution Factor
M = Wet weight (g)
% solid = % total solids

Sample: AM16701

$$\frac{(365.737942621129)ng/mL(25)mL(8)(1/1000\mu g/ng)}{(10.495)g(0.397)} = 18 \ \mu g/g(mg/Kg)$$

[1] Response factor calculated using total area of 5 peaks used to quantitate each Aroclor. Mean response factor not used in Aroclor quantitation, calibration curve by linear regression used for quantitation. Concentrations are nominal values, please see Calibration Curve Report Point Table for actual values.

Note : Response factor calculated using total area of 5 peaks. A single point standard is used to quantitate Aroclor 1016, Aroclor 1232, Aroclor 1248, and Aroclor 1260.

[1] Response factor calculated using total area of 5 peaks used to quantitate each Aroclor. Mean response factor not used in Aroclor quantitation, calibration curve by linear regression used for quantitation. Concentrations are nominal values, please see Calibration Curve Report Point Table for actual values.

Note : Response factor calculated using total area of 5 peaks. A single point standard is used to quantitate Aroclor 1016, Aroclor 1232, Aroclor 1248, and Aroclor 1260.

CASE NARRATIVE

This data package (NEA SDG ID: 09100243) consists of 5 sediment samples received on 10/20/2009. The samples are from Project Name: HUDSON RIVER RAMP.

This sample delivery group consists of the following samples:

Lab Sample ID	Client ID	Collection Date
AM19539	SSSED-LOC7-1-091020-UT001	10/20/2009 09:06
AM19540	SSSED-LOC7-2-091020-UT001	10/20/2009 09:17
AM19541	SSSED-LOC7-4-091020-UT001	10/20/2009 09:34
AM19542	SSSED-LOC7-5-091020-UT001	10/20/2009 09:41
AM19543	SSSED-LOC7-6-091020-UT001	10/20/2009 09:53

Sample Delivery and Receipt Conditions

(1.) Northeast Analytical provided sample pickup service on 10/20/2009.

(2.) All samples were received at the laboratory intact and within holding times.

(3.) The following cooler temperature was recorded at sample receipt: 4.2 degrees Celsius. Please see Chain of Custody for details.

PCB Aroclor Analysis

Analysis for PCB Aroclors was performed by GEHR Method 8082. Samples were extracted by Accelerated Solvent Extraction (EPA Method 3545). The following technical and administrative items were noted for the analysis:

(1.) The surrogates DCBP and TCMX were diluted out for several samples SSSED-LOC7-1-091020-UT001, SSSED-LOC7-2-091020-UT001, SSSED-LOC7-4-091020-UT001, SSSED-LOC7-5-091020-UT001, SSSED-LOC7-6-091020-UT001 (NEA ID: AM19539, AM19540, AM19541, AM19542, and AM19543) due to the high concentration of PCB in the samples. Please see associated Form 2 for details.

Percent Moisture Analysis

Analysis for percent moisture was performed by ASTM D2216-98. The following technical and administrative items were noted for the analysis: The following technical and administrative items were noted for the analysis:

(1.) All quality assurance parameters were met for the analysis.

Mass of Solids for Sediments

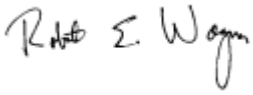
Mass of solids was performed by NEA Method SOP NE277_01.

(1.) All quality assurance parameters were met for the analysis.

Qualifier Summary

(1.) B-Denotes analyte observed in associated method blank at a concentration exceeding the MDL.
(2.) J-Denotes concentration result greater than the MDL but less than the PQL.
(3.) U-Denotes analyte not observed at a concentration greater than the MDL.

Respectfully submitted,



Robert E. Wagner
Laboratory Director & Founder

Curve: GC26B_072209

Sample Calculation

First Order (1/X) Weighted Linear Regression with intercept (Initial Calibration)

$Y = A + (B * x)$

Y = Response µV-sec (sum of 5 quant peaks)
A = Constant (intercept) µV-sec
B = First Order Coefficient (slope)
x = Solution Concentration (ng/mL)

For Aroclor 1221

A = 53.841994
B = 16.517369

$$X = \frac{Y - 53.841994}{16.517369}$$

For Sample NEA ID: AM19539

Aroclor 1221 Y = 6296.2646 µV * sec

$$X = \frac{6296.2646 - 53.841994}{16.517369} = 377.9308 \text{ ng/mL}$$

$$\text{Final Concentration} = \frac{(x)(v_t)(D.F.)(1/1000)}{(M)(\%solid/100)}$$

v_t = Extract Volume (mL)
D.F. = Analytical Dilution Factor
M = Wet weight (g)
% solid = % total solids

Sample: AM19539

$$\frac{(377.930807624386)ng/mL(25)mL(10)(1/1000\mu g/ng)}{(10.05)g(0.3977)} = 24 \ \mu g/g(mg/Kg)$$

[1] Response factor calculated using total area of 5 peaks used to quantitate each Aroclor. Mean response factor not used in Aroclor quantitation, calibration curve by linear regression used for quantitation. Concentrations are nominal values, please see Calibration Curve Report Point Table for actual values.

Note : Response factor calculated using total area of 5 peaks. A single point standard is used to quantitate Aroclor 1016, Aroclor 1232, Aroclor 1248, and Aroclor 1260.

Aroclor - 1260	ND	0.32	mg/kg	10/22/2009	U
Total PCBs	28.0				

Notes: ND (Not Detected). Denotes analyte not detected at a concentration greater than the MDL.
MDL (Method Detection Limit). Denotes lowest analyte concentration observable for the sample based on statistical study.

CASE NARRATIVE

This data package (NEA SDG ID: 09100271) consists of 17 sediment samples received on 10/22/2009. The samples are from Project Name: HUDSON RIVER RAMP.

This sample delivery group consists of the following samples:

Lab Sample ID	Client ID	Collection Date
AM19727	SSSED-EGIA-10-091022-UT001	10/22/2009 09:47
AM19728	SSSED-EGIA-1-091022-UT001	10/22/2009 09:18
AM19729	SSSED-EGIA-11-091022-UT001	10/22/2009 09:47
AM19730	SSSED-EGIA-12-091022-UT001	10/22/2009 09:48
AM19731	SSSED-EGIA-13-091022-UT001	10/22/2009 09:50
AM19732	SSSED-EGIA-14-091022-UT001	10/22/2009 09:51
AM19733	SSSED-EGIA-15-091022-UT001	10/22/2009 09:51
AM19734	SSSED-EGIA-16-091022-UT001	10/22/2009 09:52
AM19735	SSSED-EGIA-17-091022-UT001	10/22/2009 09:53
AM19736	SSSED-EGIA-2-091022-UT001	10/22/2009 09:36
AM19737	SSSED-EGIA-3-091022-UT001	10/22/2009 09:38
AM19738	SSSED-EGIA-4-091022-UT001	10/22/2009 09:40
AM19739	SSSED-EGIA-5-091022-UT001	10/22/2009 09:41
AM19740	SSSED-EGIA-6-091022-UT001	10/22/2009 09:42
AM19741	SSSED-EGIA-7-091022-UT001	10/22/2009 09:43
AM19742	SSSED-EGIA-8-091022-UT001	10/22/2009 09:45
AM19743	SSSED-EGIA-9-091022-UT001	10/22/2009 09:46

Sample Delivery and Receipt Conditions

(1.) Northeast Analytical provided sample pickup service on 10/22/2009.

(2.) All samples were received at the laboratory intact and within holding times.

(3.) The following cooler temperature was recorded at sample receipt: 3.4 degrees Celsius. Please see Chain of Custody for details.

(4.) On the original Chain of Custody the 508 method was requested but it should be GEHR Method 8082. The Chain of Custody was hand corrected and added as page three and four to the original Chain of Custody.

PCB Aroclor Analysis

Analysis for PCB Aroclors was performed by GEHR Method 8082. Samples were extracted by Accelerated Solvent Extraction (EPA Method 3545). The following technical and administrative items were noted for the analysis:

(1.) The surrogates DCBP and TCMX were diluted out for several samples (NEA ID: AM19727, AM19728, AM19729, AM19730, AM19731, AM19732, AM19733, AM19734, AM19735, AM19737, AM19738, AM19739, AM19740, AM19741, AM19742, and AM19743) due to the high concentration of PCB in the samples. Please see associated Form 2 for details.

(2.) The retention times for DCBP and/or TCMX surrogate compounds for the initial calibration verification check standards analyzed on July 18th were outside established retention time windows compared to the retention times established by the initial calibration sequence for GC column analysis GC26F on (ICAL analyzed on July 13th and 14th). A power outage occurred after analysis of calibration curve which caused RT shift. The

surrogate peaks were identified based on pattern recognition and confirmed by percent recovery. The Aroclor quantitation peaks were within established RT windows for these standards. Please see Form 8 for details.

Mass of Solids for Sediments

Mass of solids was performed by NEA Method SOP NE277_01.

Percent Moisture Analysis

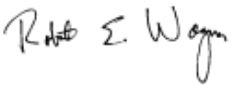
Analysis for percent moisture was performed by ASTM D2216-98. The following technical and administrative items were noted for the analysis: The following technical and administrative items were noted for the analysis:

(1.) All quality assurance parameters were met for the analysis.

Qualifier Summary

(1.) B-Denotes analyte observed in associated method blank at a concentration exceeding the MDL.
(2.) J-Denotes concentration result greater than the MDL but less than the PQL.
(3.) U-Denotes analyte not observed at a concentration greater than the MDL.

Respectfully submitted,



Robert E. Wagner
Laboratory Director & Founder

Curve: GC26F_071309

Sample Calculation

First Order (1/X) Weighted Linear Regression with intercept (Initial Calibration)

$Y = A + (B * x)$

Y = Response µV-sec (sum of 5 quant peaks)
A = Constant (intercept) µV-sec
B = First Order Coefficient (slope)
x = Solution Concentration (ng/mL)

For Aroclor 1221

A = -23.61055
B = 16.420926

$$X = \frac{Y - -23.61055}{16.420926}$$

For Sample NEA ID: AM19727

Aroclor 1221 Y = 6080.7293 µV * sec

$$X = \frac{6080.7293 - -23.610554}{16.420926} = 371.7415 \text{ ng/mL}$$

$$\text{Final Concentration} = \frac{(x)(v_t)(D.F.)(1/1000)}{(M)(\%solid/100)}$$

v_t = Extract Volume (mL)
D.F. = Analytical Dilution Factor
M = Wet weight (g)
% solid = % total solids

Sample: AM19727

$$\frac{(371.741511654093)ng/mL(25)mL(20)(1/1000\mu g/ng)}{(10.827)g(0.313)} = 55 \ \mu g/g(mg/Kg)$$

[1] Response factor calculated using total area of 5 peaks used to quantitate each Aroclor. Mean response factor not used in Aroclor quantitation, calibration curve by linear regression used for quantitation. Concentrations are nominal values, please see Calibration Curve Report Point Table for actual values.

Note : Response factor calculated using total area of 5 peaks. A single point standard is used to quantitate Aroclor 1016, Aroclor 1232, Aroclor 1248, and Aroclor 1260.

[1] Response factor calculated using total area of 5 peaks used to quantitate each Aroclor. Mean response factor not used in Aroclor quantitation, calibration curve by linear regression used for quantitation. Concentrations are nominal values, please see Calibration Curve Report Point Table for actual values.

Note : Response factor calculated using total area of 5 peaks. A single point standard is used to quantitate Aroclor 1016, Aroclor 1232, Aroclor 1248, and Aroclor 1260.

1336-36-3	Total PCBs	0.019	U

Laboratory Qualifiers:
U - Denotes analyte not detected at concentration greater than or equal to the Method Detection Limit (MDL). MDLs are adjusted for sample weight/volume and dilution factors.

Number (n):	8	
AVG:	0.0770	ug/g
STD (s):	0.00436	ug/g
%RSD:	5.67%	
MDL:	0.0131	ug/g
PQL:	0.0654	ug/g
VALID:	valid	

One sided Student's t values (t) at the 99% confidence level.

Number (n)	(t) value
7	3.143
8	2.998

MDL calculations:

MDL = t * s

Where:

t = one sided Student's t value for the number of replicates at the 99% level

s = standard deviation of the population

PQL calculations:

PQL = MDL * 5

Number (n):	7	
AVG:	0.0762	ug/g
STD (s):	0.00433	ug/g
%RSD:	5.69%	
MDL:	0.0136	ug/g
PQL:	0.0681	ug/g
VALID:	valid	

One sided Student's t values (t) at the 99% confidence level.

Number (n)	(t) value
7	3.143
8	2.998

Comments: Replicate #3 was omitted from the MDL study due to technician spiking the sample twice during the preparation for extraction.

MDL calculations:

MDL = t * s

Where:

t = one sided Student's t value for the number of replicates at the 99% level

s = standard deviation of the population

PQL = MDL * 5

REVISED CASE NARRATIVE

This data package (NEA SDG ID: 09070141) consists of 4 filter samples and 4 water samples received on 07/14/2009. The samples are from Project Name: HUDSON RIVER RAMP.

Revised Data Summary Package

The following correction has been made to the original data package submitted for this sample delivery group:

(1.) The Certificate of Analysis has been replaced for the TOC filter samples. Original results for the TOC filter samples were 1,000X too high due to a unit conversion error. Because of the complexity of this study, data was originally intended to be reported in an excel spreadsheet on a weight basis. The data was later requested to be sent in an up-loadable EDD format requiring manual entry into our LIMS. Reporting units were also changed, as requested, to incorporated volume filtered. The unit conversion error occurred during this time and was entered incorrectly.

This sample delivery group consists of the following samples:

Lab Sample ID	Client ID	Collection Date
AM10021	WNF-TRAN-090714-300MDOWN	07/14/2009 15:25
AM10022	WNF-TRAN-090714-30MDOWN	07/14/2009 14:27
AM10023	WNF-TRAN-090714-GI100MDOWN	07/14/2009 16:30
AM10024	WNF-TRAN-090714-GI100UP	07/14/2009 10:41
AM10025	WNF-TRAN-090714-300MDOWN-FILTER	07/14/2009 15:25
AM10026	WNF-TRAN-090714-30MDOWN-FILTER	07/14/2009 14:27
AM10027	WNF-TRAN-090714-GI100MDOWN-FILTER	07/14/2009 16:30
AM10028	WNF-TRAN-090714-GI100UP-FILTER	07/14/2009 10:41

Sample Delivery and Receipt Conditions

(1.) Northeast Analytical provided sample pickup service on 07/14/2009.

(2.) All samples were received at the laboratory intact and within holding times.

(3.) The following cooler temperatures were recorded at sample receipt: 7.3, 2.6, 10.1 degrees Celsius. Which exceed temperature limits; samples were collected and received at the laboratory on the same day. Ice was present in the cooler.

Sample Login Receipt Administrative Notes:

(1.) One of 2 -4L bottle for sample WNF-TRAN-090714-30MDOWN did not have a bottle barcode present.

(2.) The signed Chain of Custody received with samples did not have filters included. There were 4 items for each sample - two 4L bottles, one 1L bottle and one filter. The container numbers were hand-crossed out and changed to 3 each. After the samples were manually logged in, another COC was emailed to NEA that listed the filters as separate samples and had correct container numbers. This electronic COC was not signed. Please see COC records for details.

Total PCBs by Green Bay Method (8L)

Analysis for Total PCBs was performed by NEA SOP NE207_03. Samples were extracted by USEPA SW-846 Method 3535 Solid Phase Extraction. Eight-liter water samples were extracted by NEA SOP NE208_03. The following technical and administrative items were noted for the analysis:

(1.) Note: Samples (NEA ID: AM10021, AM10022, AM10023 and AM10024) were field filtered by the client prior to receipt at the laboratory using 0.7 micron pore size filters. Dissolved PCB analysis was performed on the filtered sample aliquot provided for each sample by the client (two-4 Liter bottles) which were designated for CSGB analysis. Analysis for Particulate bound PCB for samples (NEA ID: AM10025,

AM10026, AM10027 and AM10028) was performed by Soxhlet extraction and GC Congener analysis of the associated filters which were provided by the client. The final sample volume used for particulate PCB analysis was based on the total volume filtered corrected for the percentage area of the filter that was extracted since a punched out portion of the filter was used for particulate TOC analysis.

(2.) Note: Hudson River Bias Correction applied (v09/23/2004) to GC Column peaks 5, 8, and 14 (which are comprised of congeners IUPAC 4 and 10; IUPAC 5 and 8; and IUPAC 15 and 18, respectively). Please see SOP NE207_03 for details.

(3.) Concentration results for Peak 5, Peak 7, Peak 22, Peak 25, Peak 26, Peak 27, Peak 29, Peak 30, Peak 32, Peak 33, Peak 34, Peak 49, Peak 50, Peak 51, Peak 54, Peak 55, Peak 56, Peak 57, Peak 63, Peak 65, Peak 66, Peak 67, Peak 71, Peak 74, and Peak 94 were observed in the Method Blank sample (AM10025B). All associated positive sample concentration results have been flagged (B) to denote the observed contamination.

(4.) Concentration results for, Peak 22, Peak 49, Peak 55, Peak 57, Peak 65, Peak 66, and Peak 67, were observed in the Method Blank sample (AM10021B). All associated positive sample concentration results have been flagged (B) to denote the observed contamination.

(5.) Sample(s) (NEA ID: AM10021, AM10022, AM10023, AM10024, AM10025, AM10026, AM10027 and AM10028) required additional analysis at a dilution for several PCB congener peaks including: Peak 2, Peak 4, Peak 5, Peak 6, Peak 7, Peak 8, Peak 10, Peak 13, Peak 14, Peak 15, Peak 16, Peak 17, Peak 21, Peak 22, Peak 23, Peak 25, Peak 27, Peak 29, Peak 31, Peak 32, Peak 33, Peak 44, Peak 45, Peak 55, Peak 56, Peak 67, and Peak 72 to be within the calibration curve range of the instrument. This analysis is included in this data package and is identified with a NEA ID suffix of DL. The concentration for Peak 2, Peak 4, Peak 5, Peak 6, Peak 7, Peak 8, Peak 10, Peak 13, Peak 14, Peak 15, Peak 16, Peak 17, Peak 21, Peak 22, Peak 23, Peak 25, Peak 27, Peak 29, Peak 31, Peak 32, Peak 33, Peak 44, Peak 45, Peak 55, Peak 56, Peak 67, and Peak 72 are included in the original analysis to provide the correct PCB total concentration.

(6.) The dilution re-analysis sample (NEAID: AM10021DL1) was re-analyzed due to incorrect internal standard addition to the sample for the original analysis. Results for the re-analysis are provided with RR1 extension. Please see Form 8 for details.

(7.) The Nonachlorobiphenyl surrogate was diluted out for the dilution re-analysis for samples: (NEA ID: AM10021DL1RR1, AM10022DL1, AM10023DL1, and AM10024DL1) Please see Form 8 for details.

(8.) The percent recovery for the Octachloronapthalene (OCN) internal standard exceeded method specified limits for samples AM10022 and AM10023 due to chromatographic interference from the sample matrix. Please see associated Sample Analysis Data Sheets for details.

(9.) Note a chromatographic interference peak associated with sample filtration process was observed for samples (NEA ID: AM10021, AM10022, AM10023 and AM10024) at the retention time of peak 74. This interfering peak was not integrated. Please see associated sample chromatograms for details.

(10.) The percent recovery for the Laboratory Control Spike sample (NEA ID: AM10025L) exceeded lab established limits. This sample exhibited an uncharacteristically high concentration for Peak 29 which was also observed in the associated method blank sample.

Particulate Total Organic Carbon

Analysis for Particulate Total Organic Carbon was performed by EPA Lloyd Kahn Method with triplicate analysis. The following technical and administrative items were noted for the analysis:

(1.) Note: Analysis for particulate organic carbon was performed on filter punches which were obtained from filters provided by the client after field filtration procedures. Concentrations are based on the total filtered water volume and have been corrected for filter punched sub-sample area based on the ratio of the punched area to the total filter area.

(2.) All quality assurance parameters were met for the analysis.

Dissolved Total Organic Carbon

Analysis for Dissolved Total Organic Carbon in water was performed by Standard Methods SM 5310B. The following technical and administrative items were noted for the analysis:

(1.) Note: Analysis for dissolved organic carbon was performed on filtered water samples which were provided by the client after field filtration procedures.

(1.) All quality assurance parameters were met for the analysis.

Qualifier Summary

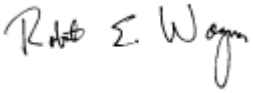
(1.) B-Denotes analyte observed in associated method blank at a concentration exceeding the MDL.

(2.) E-Denotes analyte concentration exceeded calibration range of instrument. Concentration result should be considered as estimated.

(3.) J-Denotes concentration result greater than the MDL but less than the PQL.

(4.) U-Denotes analyte not observed at a concentration greater than the MDL.

Respectfully submitted,



Robert E. Wagner
Laboratory Director & Founder

Surrogate % Recovery Summary

PCB ANALYTICAL SEQUENCE/SURROGATE RECOVERY

Lab Name: Northeast Analytical, Inc. SDG No: 09070141

ELAP ID No: 11078 Init. Calib. Date(s): 06/22/2009,06/23/2009,06/24/2009

GC Column (1): Agilent DB-1; 30 meter; 0.25 micron phase thickness

Instrument ID: GC16

THE ANALYTICAL SEQUENCE OF SAMPLES, BLANKS, AND STANDARDS IS GIVEN BELOW:

SURROGATE RT FROM INITIAL CALIBRATION SURROGATE STANDARDS:
IUPAC 207: 40.92

	CLIENT SAMPLE ID	LAB SAMPLE ID	LAB FILE ID	DATE/TIME ANALYZED	IUPAC 207 RT #	RT DIFFERENCE (LIMIT +/- 0.07 MIN)	SURROGATE % RECOVERY (Limits 60.0-140)	
01	ICAL 6.25 ng/mL	ICAL0622A	GC16-711-6	06/22/2009 16:51:40

Total Concentration = 814 ng/L 20.7 112

Total Nanomoles = 3.874

Average Molecular Weight = 210.1

Number of Calibrated Peaks Found = 73

Internal Standard Retention Time = 46.94 minutes

Internal Standard Peak Area = 136768.0

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: WNF-TRAN-090714-300MDOWN
Comment: HUDSON RIVER RAMP;COC090714-HNEA-01
Date Acquired: 07/15/2009 15:14:44
Lab Sample ID: AM10021
LRF ID: 09070141-01
Lab File ID: GC16-731-8

Type for Mixed Peak Deconvolution = S

Concentration = 814 ng/L

Total Nanomoles = 3.874

Average Molecular Weight = 210.1

Number of Calibrated Peaks Found = 73

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Concentration = 767 ng/L

Total Nanomoles = 3.692

Average Molecular Weight = 207.8

Number of Calibrated Peaks Found = 11

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360);

Total Concentration = 1570 ng/L 33.7 166

Total Nanomoles = 7.521

Average Molecular Weight = 208.6

Number of Calibrated Peaks Found = 78

Internal Standard Retention Time = 46.93 minutes

Internal Standard Peak Area = 145041.1

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: WNF-TRAN-090714-30MDOWN
Comment: HUDSON RIVER RAMP;COC090714-HNEA-01
Date Acquired: 07/15/2009 16:21:58
Lab Sample ID: AM10022
LRF ID: 09070141-02
Lab File ID: GC16-731-9

Type for Mixed Peak Deconvolution = S

Concentration = 1570 ng/L

Total Nanomoles = 7.521

Average Molecular Weight = 208.6

Number of Calibrated Peaks Found = 78

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Concentration = 1530 ng/L

Total Nanomoles = 7.382

Average Molecular Weight = 207.9

Number of Calibrated Peaks Found = 19

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

Total Concentration = 254 ng/L 6.62 31.4

Total Nanomoles = 1.182

Average Molecular Weight = 214.5

Number of Calibrated Peaks Found = 72

Internal Standard Retention Time = 46.94 minutes

Internal Standard Peak Area = 144571.4

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: WNF-TRAN-090714-GI100MDOWN
Comment: HUDSON RIVER RAMP;COC090714-HNEA-01
Date Acquired: 07/15/2009 17:29:23
Lab Sample ID: AM10023
LRF ID: 09070141-03
Lab File ID: GC16-731-10

Type for Mixed Peak Deconvolution = S

Concentration = 254 ng/L

Total Nanomoles = 1.182

Average Molecular Weight = 214.5

Number of Calibrated Peaks Found = 72

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Concentration = 217 ng/L

Total Nanomoles = 1.037

Average Molecular Weight = 208.8

Number of Calibrated Peaks Found = 7

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).

Ortho Cl / biphenyl Residue = 1.53

Meta + Para Cl / biphenyl Residue = 0.19

Total Cl / biphenyl Residue = 1.72

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

Concentration = 248 ng/L

Total Nanomoles = 1.161

Average Molecular Weight = 213.5

Number of Calibrated Peaks Found = 69

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Concentration = 216 ng/L

Total Nanomoles = 1.039

Average Molecular Weight = 208.3

Number of Calibrated Peaks Found = 6

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610);

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: WNF-TRAN-090714-300MDOWN-FILTER
Comment: HUDSON RIVER RAMP;COC090714-HNEA-01
Date Acquired: 07/24/2009 00:38:56
Lab Sample ID: AM10025
LRF ID: 09070141-05
Lab File ID: GC16-738-4

Type for Mixed Peak Deconvolution = S

Total PCBs in sample = 97.2 ng/L

PCB Homolog Distribution

Homologs	Weight %	Mole %
Mono	20.12	25.95
Di	23.21	25.26
Tri	27.67	26.13
Tetra	16.65	13.93
Penta	7.43	5.53
Hexa	3.00	2.05
Hepta	1.38	0.85
Octa	0.48	0.27
Nona	0.07	0.03
Deca	0.00	0.00

Nominal 'Aroclor' Distribution

Aroclor	Indicator Peak (PK # / IUPAC #)	Amount ng/L	Percent Sediment	Percent Biota
A1221	2/001	16.3818	69.5	67.9
A1242	23+24/31+28	5.6823	24.1	23.6
A1254SED	61/100	1.2756	5.41	
A1254BIO	69+75+82/149+153+138	1.8077		7.50
A1260	102/180	0.1824	0.774	0.756
A1268	115/194	0.0616	0.261	0.255

Ortho Cl / biphenyl Residue = 1.51

Meta + Para Cl / biphenyl Residue = 1.08

Total Cl / biphenyl Residue = 2.59

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

Concentration = 97.2 ng/L

Total Nanomoles = 0.400

Average Molecular Weight = 243.4

Number of Calibrated Peaks Found = 90

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Total Concentration = 46.4 ng/L 10.6 42.5

Total Nanomoles = 0.212

Average Molecular Weight = 219.5

Number of Calibrated Peaks Found = 15

Internal Standard Retention Time = 46.93 minutes

Internal Standard Peak Area = 149182.4

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: WNF-TRAN-090714-300MDOWN-FILTER
Comment: HUDSON RIVER RAMP;COC090714-HNEA-01
Date Acquired: 07/24/2009 01:46:24
Lab Sample ID: AM10025DL1
LRF ID: 09070141-05DL1
Lab File ID: GC16-738-5

Type for Mixed Peak Deconvolution = S

118	54.65	10:4	*209*		23456-23456	-	-

Concentration = 46.4 ng/L

Total Nanomoles = 0.212

Average Molecular Weight = 219.5

Number of Calibrated Peaks Found = 15

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

Concentration = 183 ng/L

Total Nanomoles = 0.749

Average Molecular Weight = 244.4

Number of Calibrated Peaks Found = 83

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Total Concentration = 13.8 ng/L 20.8 83.6

Total Nanomoles = 0.054

Average Molecular Weight = 257.5

Number of Calibrated Peaks Found = 2

Internal Standard Retention Time = 46.93 minutes

Internal Standard Peak Area = 144526.6

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Not applicable

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: WNF-TRAN-090714-30MDOWN-FILTER
Comment: HUDSON RIVER RAMP;COC090714-HNEA-01
Date Acquired: 07/24/2009 04:01:15
Lab Sample ID: AM10026DL1
LRF ID: 09070141-06DL1
Lab File ID: GC16-738-7

Type for Mixed Peak Deconvolution = S

Concentration = 13.8 ng/L

Total Nanomoles = 0.054

Average Molecular Weight = 257.5

Number of Calibrated Peaks Found = 2

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Concentration = 59.5 ng/L

Total Nanomoles = 0.240

Average Molecular Weight = 247.6

Number of Calibrated Peaks Found = 90

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).

Nominal 'Aroclor' Distribution

Aroclor	Indicator Peak (PK # / IUPAC #)	Amount ng/L	Percent Sediment	Percent Biota
A1221	2/001			
A1242	23+24/31+28			
A1254SED	61/100			
A1254BIO	69+75+82/149+153+138			
A1260	102/180			
A1268	115/194			

Ortho Cl / biphenyl Residue = 2.08

Meta + Para Cl / biphenyl Residue = 0.33

Total Cl / biphenyl Residue = 2.41

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610);

Concentration = 20.5 ng/L

Total Nanomoles = 0.086

Average Molecular Weight = 237.4

Number of Calibrated Peaks Found = 8

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610);

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: WNF-TRAN-090714-GI100UP-FILTER
Comment: HUDSON RIVER RAMP;COC090714-HNEA-01
Date Acquired: 07/24/2009 08:31:02
Lab Sample ID: AM10028
LRF ID: 09070141-08
Lab File ID: GC16-738-11

Type for Mixed Peak Deconvolution = S

Concentration = 13.2 ng/L

Total Nanomoles = 0.051

Average Molecular Weight = 261.2

Number of Calibrated Peaks Found = 86

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

Concentration = 0.871 ng/L

Total Nanomoles = 0.003

Average Molecular Weight = 292.0

Number of Calibrated Peaks Found = 1

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Not applicable

Project Name: GC16_May_2009
Sample Set Name: GC16_071509C
Date Printed: 07/30/2009

Operating Conditions Gas Chromatography

User Name: Keith Friedman
Injection Method: Splitless
Sample Size: 0.5 uL
Column Type: Capillary

Temperature Information

Column Temperature: Program
Injector Temperature: 300 °C
Detector Temperature: 300 °C

Column Temperature Information

Initial Temperature: 50 °C Hold: 2.5 min
Temperature Program: 15 °C/min
Intermediate Temperature: 150 °C
Temperature Program: 4.3 °C/min
Final Temperature: 220 °C Hold: 35.1 min

Column Information

Column ID: Agilent DB-1; 30 meter; 0.25 micron phase thickness
Material: Fused Silica
Length: 30 meter
Internal Diameter: 0.25 mm
Carrier Gas: Helium
Make-up Gas: Nitrogen
Flow Pressure: 28.8 psi
Make-up Flow: 65 mL/min
Split Ratio: None

Detector Information

Detector Name: Detector 1 GC16
Detector Type: ECD
Detector Range: 3

Project Name: GC16_May_2009
Sample Set Name: GC16_072309a
Date Printed: 07/30/2009

Operating Conditions Gas Chromatography

User Name: Inga Hotaling
Sample Size: 0.5 uL
Injection Method: Splitless
Column Type: Capillary

Temperature Information

Column Temperature: Program
Injector Temperature: 300 °C
Detector Temperature: 300 °C

Column Temperature Information

Initial Temperature: 50 °C Hold: 2.5 min
Temperature Program: 15 °C/min
Intermediate Temperature: 150 °C
Temperature Program: 4.3 °C/min
Final Temperature: 220 °C Hold: 35.1 min

Column Information

Column ID: Agilent DB-1; 30 meter; 0.25 micron phase thickness
Material: Fused Silica
Length: 30 meter
Internal Diameter: 0.25 mm
Carrier Gas: Helium
Flow Pressure: 28.8 psi
Split Ratio: None
Make-up Gas: Nitrogen
Make-up Flow: 65 mL/min

Detector Information

Detector Name: Detector 1 GC16
Detector Type: ECD
Detector Range: 3

PCB CONTINUING CALIBRATION SUMMARY

LAB NAME:	Northeast Analytical, Inc.	SGD NO:	09070141
ELAP ID No:	11078		
INSTRUMENT ID:	GC16		
GC COLUMN:	Agilent DB-1; 30 meter; 0.25 micron phase thickness		

Continuing Calibration Standard CCCS0723B

Lab File ID:	GC16-737-8	Known Amount:	122 ng/ml
Date:	07/23/2009	Calculated Amount:	135 ng/ml
Time:	16:33:10	OCN (I.S.) Peak Area:	131987
		% Recovery of I.S. (50 - 150 %):	94.5

Continuing Calibration Standard CCCS0723C

Lab File ID:	GC16-738-10	Known Amount:	122 ng/ml
Date:	07/24/2009	Calculated Amount:	133 ng/ml
Time:	07:23:36	OCN (I.S.) Peak Area:	140137
		% Recovery of I.S. (50 - 150 %):	100

Continuing Calibration Standard CCCS0723D

Lab File ID:	GC16-738-20	Known Amount:	122 ng/ml
Date:	07/24/2009	Calculated Amount:	128 ng/ml
Time:	18:38:18	OCN (I.S.) Peak Area:	156978
		% Recovery of I.S. (50 - 150 %):	112

Concentration = 120 ng/mL

Total Nanomoles = 0.427

Average Molecular Weight = 280.1

Number of Calibrated Peaks Found = 102

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Total Concentration = 123 ng/mL

Total Nanomoles = 0.436

Average Molecular Weight = 282.6

Number of Calibrated Peaks Found = 102

Internal Standard Retention Time = 46.93 minutes

Internal Standard Peak Area = 124772.4

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: CCC Std 122 ng/mL
Comment: HUDSON RIVER RAMP;COC090714-HNEA-01
Date Acquired: 07/15/2009 19:44:17
Lab Sample ID: CCCS0715B
LRF ID: CCC Std 122 ng/mL
Lab File ID: GC16-731-12

Type for Mixed Peak Deconvolution = S

Concentration = 123 ng/mL

Total Nanomoles = 0.436

Average Molecular Weight = 282.6

Number of Calibrated Peaks Found = 102

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Concentration = 121 ng/mL

Total Nanomoles = 0.427

Average Molecular Weight = 282.8

Number of Calibrated Peaks Found = 102

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Total Concentration = 135 ng/mL

Total Nanomoles = 0.481

Average Molecular Weight = 280.3

Number of Calibrated Peaks Found = 102

Internal Standard Retention Time = 46.93 minutes

Internal Standard Peak Area = 131986.5

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: CCC Std 122 ng/mL
Comment: HUDSON RIVER RAMP;COC090714-HNEA-01
Date Acquired: 07/23/2009 16:33:10
Lab Sample ID: CCCS0723B
LRF ID: CCC Std 122 ng/mL
Lab File ID: GC16-737-8

Concentration = 135 ng/mL

Total Nanomoles = 0.481

Average Molecular Weight = 280.3

Number of Calibrated Peaks Found = 102

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Total Concentration = 133 ng/mL

Total Nanomoles = 0.474

Average Molecular Weight = 281.0

Number of Calibrated Peaks Found = 102

Internal Standard Retention Time = 46.93 minutes

Internal Standard Peak Area = 140136.6

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: CCC Std 122 ng/mL
Comment: HUDSON RIVER RAMP;COC090714-HNEA-01
Date Acquired: 07/24/2009 07:23:36
Lab Sample ID: CCCS0723C
LRF ID: CCC Std 122 ng/mL
Lab File ID: GC16-738-10

Type for Mixed Peak Deconvolution = S

Concentration = 133 ng/mL

Total Nanomoles = 0.474

Average Molecular Weight = 281.0

Number of Calibrated Peaks Found = 102

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

PCB Homolog Distribution

Homologs	Weight %	Mole %
Mono	10.79	16.08
Di	12.35	15.48
Tri	18.27	19.92
Tetra	21.58	20.83
Penta	8.39	7.18
Hexa	8.02	6.30
Hepta	13.01	9.26
Octa	6.95	4.55
Nona	0.63	0.38
Deca	0.00	0.00

Nominal 'Aroclor' Distribution

Aroclor	Indicator Peak (PK # / IUPAC #)	Amount (ng/mL)	Percent Sediment	Percent Biota
A1221	2/001	8.3419	37.2	30.2
A1242	23+24/31+28	6.7153	29.9	24.3
A1254SED	61/100	1.6538	7.37	
A1254BIO	69+75+82/149+153+138	6.8346		24.7
A1260	102/180	4.4518	19.8	16.1
A1268	115/194	1.2778	5.69	4.63

Ortho Cl / biphenyl Residue = 1.57
Meta + Para Cl / biphenyl Residue = 2.12
Total Cl / biphenyl Residue = 3.69

Concentration = 128 ng/mL

Total Nanomoles = 0.455

Average Molecular Weight = 281.1

Number of Calibrated Peaks Found = 102

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

QC Sample Raw Data

PCB SAMPLE ANALYSIS DATA SHEET

Laboratory Name:	Northeast Analytical, Inc.	SDG No:	09070141
ELAP ID No:	11078	LRF ID:	CEBLK-69
Matrix:	ORGANIC FREE WATER	Client ID:	CEBLK-69(METHOD BLANK)
Sample Wt(Dry)/Vol:	8000 mL	Lab Sample ID:	AM10021B
% Moisture:	100	Lab File ID:	GC16-731-6
Extraction:	Solid Phase Extraction - 8L	Date Received:	
Conc. Extract Volume:	5000 uL	Date Extracted:	07/14/2009
Injection Volume:	0.5 uL	Date/Time Analyzed:	07/15/2009 13:00
Analytical SOP Reference:	SOP NE207_03.DOC	Dilution Factor:	1
Extraction SOP Reference:	SOP NE208_03.DOC	Sample Cleanup:	YES
GC Column:	Agilent DB-1; 30 meter; 0.25 micron phase thickness		

OCN (I.S.) Peak Area: 138422

Percent Recovery (50 - 150 %): 145

SAMPLE TOTAL PCB CONCENTRATION: <1.00 ng/L U

Visual Aroclor ID: No Aroclor Pattern Detected

Total Concentration = <1.00 ng/L 1.00 4.03 U

Total Nanomoles = 0.000

Average Molecular Weight = 318.8

Number of Calibrated Peaks Found = 49

Internal Standard Retention Time = 46.94 minutes

Internal Standard Peak Area = 138422.5

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: METHOD BLANK
Comment: HUDSON RIVER RAMP;COC090714-HNEA-01
Date Acquired: 07/15/2009 13:00:01
Lab Sample ID: AM10021B
LRF ID: CEBLK-69
Lab File ID: GC16-731-6

Type for Mixed Peak Deconvolution = S

118	54.65	10:4	*209*		23456-23456	-	-

Concentration = <1.00 ng/L

Total Nanomoles = 0.000

Average Molecular Weight = 318.8

Number of Calibrated Peaks Found = 49

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

Concentration = 5.59 ng/L

Total Nanomoles = 0.022

Average Molecular Weight = 259.9

Number of Calibrated Peaks Found = 58

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Total Concentration = 1.77 ng/L 1.03 4.16 J

Total Nanomoles = 0.006

Average Molecular Weight = 278.0

Number of Calibrated Peaks Found = 50

Internal Standard Retention Time = 46.93 minutes

Internal Standard Peak Area = 149430.2

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: METHOD BLANK
Comment: HUDSON RIVER RAMP;COC090714-HNEA-01
Date Acquired: 07/23/2009 22:24:00
Lab Sample ID: AM10025B
LRF ID: CEBLK-00
Lab File ID: GC16-738-2

Type for Mixed Peak Deconvolution = S

Concentration = 1.77 ng/L

Total Nanomoles = 0.006

Average Molecular Weight = 278.0

Number of Calibrated Peaks Found = 50

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: LAB CONTROL SPIKE
Comment: HUDSON RIVER RAMP;COC090714-HNEA-01
Date Acquired: 07/23/2009 23:31:27
Lab Sample ID: AM10025L
LRF ID: LCS-00
Lab File ID: GC16-738-3

Type for Mixed Peak Deconvolution = S

Concentration = 8.61 ng/L

Total Nanomoles = 0.032

Average Molecular Weight = 266.3

Number of Calibrated Peaks Found = 56

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

REVISED CASE NARRATIVE

This data package (NEA SDG ID: 09070149) consists of 4 filter samples and 4 water samples received on 07/15/2009. The samples are from Project Name: HUDSON RIVER RAMP.

Revised Data Summary Package

The following correction has been made to the original data package submitted for this sample delivery group:

(1.) The Certificate of Analysis has been replaced for the TOC filter samples. Original results for the TOC filter samples were 1,000X too high due to a unit conversion error. Because of the complexity of this study, data was originally intended to be reported in an excel spreadsheet on a weight basis. The data was later requested to be sent in an up-loadable EDD format requiring manual entry into our LIMS. Reporting units were also changed, as requested, to incorporated volume filtered. The unit conversion error occurred during this time and was entered incorrectly.

This sample delivery group consists of the following samples:

Lab Sample ID	Client ID	Collection Date
AM10089	WNF-TRAN-090715-GI100MDOWN	07/15/2009 11:45
AM10090	WNF-TRAN-090715-GI100MDOWN-FILTER	07/15/2009 11:45
AM10091	WNF-TRAN-090715-GI100UP	07/15/2009 09:41
AM10092	WNF-TRAN-090715-GI100UP-FILTER	07/15/2009 09:41
AM10093	WNF-TRAN-090715-GI300MDOWN	07/15/2009 12:47
AM10094	WNF-TRAN-090715-GI300MDOWN-FILTER	07/15/2009 12:47
AM10095	WNF-TRAN-090715-GI30MDOWN	07/15/2009 10:43
AM10096	WNF-TRAN-090715-GI30MDOWN-FILTER	07/15/2009 10:43

Sample Delivery and Receipt Conditions

(1.) Northeast Analytical provided sample pickup service on 07/15/2009.

(2.) All samples were received at the laboratory intact and within holding times.

(3.) The following cooler temperatures were recorded at sample receipt: 5.3, 5.0, 7.9 degrees Celsius. The 7.9 degree measurement exceeds the 6.0 degree upper limit however the samples were received on the same day as collection and Ice was present in the coolers indicating that the cooling process had begun.

Total PCBs by Green Bay Method (8L)

Analysis for Total PCBs was performed by NEA SOP NE207_03. Samples were extracted by Soxhlet Extraction Method (EPA - Method 3540C). The following technical and administrative items were noted for the analysis:

(1.) Note: Samples (NEA ID: AM10089, AM10091, AM10093 and AM10095) were field filtered by the client prior to receipt at the laboratory using 0.7 micron pore size filters. Dissolved PCB analysis was performed on the filtered sample aliquot provided for each sample by the client (two-4 Liter bottles) which were designated for CSGB analysis. Analysis for Particulate bound PCB for samples (NEA ID: AM10090, AM10092, AM10094 and AM10096) was performed by Soxhlet extraction and GC Congener analysis of the associated filters which were provided by the client. The final sample volume used for particulate PCB analysis was based on the total volume filtered corrected for the percentage area of the filter that was extracted since a punched out portion of the filter was used for particulate TOC analysis.

(1.) Note: Hudson River Bias Correction applied (v09/23/2004) to GC Column peaks 5, 8, and 14 (which are comprised of congeners IUPAC 4 and 10; IUPAC 5 and 8; and IUPAC 15 and 18, respectively). Please see SOP NE207_03 for details.

(2.) Peak 10, Peak 14, Peak 15, Peak 16, Peak 17, Peak 2, Peak 21, Peak 22, Peak 25, Peak 26, Peak 27, Peak 29, Peak 30, Peak 31, Peak 32, Peak 33, Peak 34, Peak 39, Peak 41, Peak 44, Peak 49, Peak 5, Peak 50, Peak 51, Peak 54, Peak 56, Peak 57, Peak 63, Peak 65, Peak 66, Peak 67, Peak 7, Peak 71, Peak 74, and

Peak 94 were observed in the Method Blank sample. All associated positive sample concentration results have been flagged (B) to denote the observed contamination.

(3.) Sample(s) AM 10089, AM100091, AM10092, AM10093, AM10095, AM10096 required additional analysis at a dilution for several DB-1 peaks including: Peak 2, Peak 4, Peak 5, Peak 6, Peak 7, Peak 8, Peak 10, Peak 15, Peak 16, Peak 17, Peak 21, Peak 22, Peak 23, Peak 27, Peak 29, Peak 31, Peak 33, Peak 45, Peak 56, and Peak 67 to be within the calibration curve range of the instrument. This analysis is included in this data package and is identified with a NEA ID suffix of DL. As secondary dilution for sample (NEA ID: AM10095DL2) was used due to over-dilution for the DL1 analysis The concentration for over ranged peaks including Peak 2, Peak 4, Peak 5, Peak 6, Peak 7, Peak 8, Peak 10, Peak 15, Peak 16, Peak 17, Peak 21, Peak 22, Peak 23, Peak 27, Peak 29, Peak 31, Peak 33, Peak 45, Peak 56, and Peak 67 are included in the original analysis to provide the correct PCB total concentration. Please see PCB congener amount reports for details.

(4.) The percent recovery for the -5' Nonachlorobiphenyl surrogate was below method specified quality control limits for samples AM10091 and AM10095. Please see Surrogate Recovery Summary Form for details. No additional sample material was available for re-extraction.

(5.) The -5' Nonachlorobiphenyl surrogate was diluted out for the dilution re-analysis of samples (AM10089, AM10091 and AM10093). Please see Surrogate Recovery Summary Form for details.

(6.) Note a chromatographic interference peak associated with sample filtration process was observed for samples (NEA ID: AM10089, AM10091, AM10093, AM10095) at the retention time of DB-1 peak 74. This interfering peak was not integrated. Please see associated sample chromatograms for details.

Particulate Total Organic Carbon

Analysis for Particulate Total Organic Carbon was performed by EPA Lloyd Kahn Method with triplicate analysis. The following technical and administrative items were noted for the analysis:

(1.) Note: Analysis for particulate organic carbon was performed on filter punches which were obtained from filters provided by the client after field filtration procedures. Concentrations are based on the total filtered water volume and have been corrected for filter punched sub-sample area based on the ratio of the punched area to the total filter area.

(2.) All quality assurance parameters were met for the analysis.

Dissolved Total Organic Carbon

Analysis for Dissolved Total Organic Carbon in water was performed by Standard Methods SM 5310B. The following technical and administrative items were noted for the analysis:

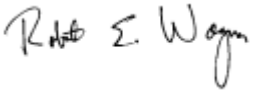
(1.) Note: Analysis for dissolved organic carbon was performed on filtered water samples which were provided by the client after field filtration procedures.

(2.) All quality assurance parameters were met for the analysis.

Qualifier Summary

(1.) B-Denotes analyte observed in associated method blank at a concentration exceeding the MDL.
(2.) E-Denotes analyte concentration exceeded calibration range of instrument. Concentration result should be considered as estimated.
(3.) J-Denotes concentration result greater than the MDL but less than the PQL.
(4.) U-Denotes analyte not observed at a concentration greater than the MDL.

Respectfully submitted,



Robert E. Wagner
Laboratory Director & Founder

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: WNF-TRAN-090715-GI100MDOWN
Comment: HUDSON RIVER RAMP;COC090715-HNEA-01
Date Acquired: 07/16/2009 06:32:29
Lab Sample ID: AM10089
LRF ID: 09070149-01
Lab File ID: GC16-731-22

Type for Mixed Peak Deconvolution = S

Total PCBs in sample = 965 ng/L

PCB Homolog Distribution

Homologs	Weight %	Mole %
Mono	48.46	53.48
Di	40.70	37.98
Tri	8.85	7.16
Tetra	1.55	1.11
Penta	0.36	0.23
Hexa	0.06	0.04
Hepta	0.01	0.01
Octa	0.00	0.00
Nona	0.00	0.00
Deca	0.00	0.00

Nominal 'Aroclor' Distribution

Aroclor	Indicator Peak (PK # / IUPAC #)	Amount ng/L	Percent Sediment	Percent Biota
A1221	2/001	459.2738	98.8	98.8
A1242	23+24/31+28	5.0815	1.09	1.09
A1254SED	61/100	0.5353	0.115	
A1254BIO	69+75+82/149+153+138	0.3619		0.0779
A1260	102/180	0.0038	0.000815	0.000815
A1268	115/194		0	0

Ortho Cl / biphenyl Residue = 1.46
Meta + Para Cl / biphenyl Residue = 0.11
Total Cl / biphenyl Residue = 1.57

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

Concentration = 965 ng/L

Total Nanomoles = 4.632

Average Molecular Weight = 208.2

Number of Calibrated Peaks Found = 80

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: WNF-TRAN-090715-GI100MDOWN
Comment: HUDSON RIVER RAMP;COC090715-HNEA-01
Date Acquired: 07/16/2009 13:16:55
Lab Sample ID: AM10089DL1
LRF ID: 09070149-01DL1
Lab File ID: GC16-732-2

Type for Mixed Peak Deconvolution = S

Concentration = 918 ng/L

Total Nanomoles = 4.448

Average Molecular Weight = 206.4

Number of Calibrated Peaks Found = 9

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360);

Concentration = 55.4 ng/L

Total Nanomoles = 0.224

Average Molecular Weight = 247.0

Number of Calibrated Peaks Found = 87

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Total Concentration = 3.91 ng/L 4.04 16.2

Total Nanomoles = 0.015

Average Molecular Weight = 257.5

Number of Calibrated Peaks Found = 2

Internal Standard Retention Time = 46.93 minutes

Internal Standard Peak Area = 145636.9

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Not applicable

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: WNF-TRAN-090715-GI100MDOWN-FILTER
Comment: HUDSON RIVER RAMP;COC090715-HNEA-01
Date Acquired: 07/24/2009 11:53:28
Lab Sample ID: AM10090DL1
LRF ID: 09070149-02DL1
Lab File ID: GC16-738-14

Type for Mixed Peak Deconvolution = S

Concentration = 3.91 ng/L

Total Nanomoles = 0.015

Average Molecular Weight = 257.5

Number of Calibrated Peaks Found = 2

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: WNF-TRAN-090715-GI100UP
Comment: HUDSON RIVER RAMP;COC090715-HNEA-01
Date Acquired: 07/16/2009 07:39:50
Lab Sample ID: AM10091
LRF ID: 09070149-03
Lab File ID: GC16-731-23

Concentration = 449 ng/L

Total Nanomoles = 2.140

Average Molecular Weight = 209.7

Number of Calibrated Peaks Found = 79

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).

Total Concentration = 413 ng/L 56.8 229

Total Nanomoles = 1.998

Average Molecular Weight = 206.7

Number of Calibrated Peaks Found = 8

Internal Standard Retention Time = 46.95 minutes

Internal Standard Peak Area = 135084.2

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610);

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: WNF-TRAN-090715-GI100UP
Comment: HUDSON RIVER RAMP;COC090715-HNEA-01
Date Acquired: 07/16/2009 14:24:19
Lab Sample ID: AM10091DL1
LRF ID: 09070149-03DL1
Lab File ID: GC16-732-3

Concentration = 413 ng/L

Total Nanomoles = 1.998

Average Molecular Weight = 206.7

Number of Calibrated Peaks Found = 8

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610);

Concentration = 18.6 ng/L

Total Nanomoles = 0.073

Average Molecular Weight = 255.8

Number of Calibrated Peaks Found = 74

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).

Total PCBs in sample = 0.753 ng/L

PCB Homolog Distribution

Homologs	Weight %	Mole %
Mono	0.00	0.00
Di	0.00	0.00
Tri	0.00	0.00
Tetra	100.00	100.00
Penta	0.00	0.00
Hexa	0.00	0.00
Hepta	0.00	0.00
Octa	0.00	0.00
Nona	0.00	0.00
Deca	0.00	0.00

Nominal 'Aroclor' Distribution

Aroclor	Indicator Peak (PK # / IUPAC #)	Amount ng/L	Percent Sediment	Percent Biota
A1221	2/001			
A1242	23+24/31+28			
A1254SED	61/100			
A1254BIO	69+75+82/149+153+138			
A1260	102/180			
A1268	115/194			

Ortho Cl / biphenyl Residue = 3.00

Meta + Para Cl / biphenyl Residue = 1.00

Total Cl / biphenyl Residue = 4.00

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Not applicable

Concentration = 0.753 ng/L

Total Nanomoles = 0.003

Average Molecular Weight = 292.0

Number of Calibrated Peaks Found = 1

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: WNF-TRAN-090715-GI300MDOWN
Comment: HUDSON RIVER RAMP;COC090715-HNEA-01
Date Acquired: 07/16/2009 08:47:16
Lab Sample ID: AM10093
LRF ID: 09070149-05
Lab File ID: GC16-731-24

Type for Mixed Peak Deconvolution = S

Concentration = 1360 ng/L

Total Nanomoles = 6.485

Average Molecular Weight = 209.0

Number of Calibrated Peaks Found = 80

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: WNF-TRAN-090715-GI300MDOWN
Comment: HUDSON RIVER RAMP;COC090715-HNEA-01
Date Acquired: 07/16/2009 15:31:44
Lab Sample ID: AM10093DL1
LRF ID: 09070149-05DL1
Lab File ID: GC16-732-4

Type for Mixed Peak Deconvolution = S

Total PCBs in sample = 1310 ng/L

PCB Homolog Distribution

Homologs	Weight %	Mole %
Mono	47.36	52.17
Di	43.30	40.34
Tri	8.74	7.06
Tetra	0.60	0.43
Penta	0.00	0.00
Hexa	0.00	0.00
Hepta	0.00	0.00
Octa	0.00	0.00
Nona	0.00	0.00
Deca	0.00	0.00

Nominal 'Aroclor' Distribution

Aroclor	Indicator Peak (PK # / IUPAC #)	Amount ng/L	Percent Sediment	Percent Biota
A1221	2/001	620.7167	99.3	99.3
A1242	23+24/31+28	4.6647	0.746	0.746
A1254SED	61/100		0	
A1254BIO	69+75+82/149+153+138			0
A1260	102/180		0	0
A1268	115/194		0	0

Ortho Cl / biphenyl Residue = 1.49
Meta + Para Cl / biphenyl Residue = 0.06
Total Cl / biphenyl Residue = 1.56

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360);

Concentration = 1310 ng/L

Total Nanomoles = 6.305

Average Molecular Weight = 207.9

Number of Calibrated Peaks Found = 17

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360);

Total Concentration = 100 ng/L 5.31 21.4

Total Nanomoles = 0.411

Average Molecular Weight = 243.6

Number of Calibrated Peaks Found = 79

Internal Standard Retention Time = 46.94 minutes

Internal Standard Peak Area = 154613.9

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: WNF-TRAN-090715-GI300MDOWN-FILTER
Comment: HUDSON RIVER RAMP;COC090715-HNEA-01
Date Acquired: 07/24/2009 15:15:32
Lab Sample ID: AM10094
LRF ID: 09070149-06
Lab File ID: GC16-738-17

Type for Mixed Peak Deconvolution = S

117	48.49	9:3	**206**		23456-2345	-	-
118	54.65	10:4	*209*		23456-23456	-	-

Concentration = 100 ng/L

Total Nanomoles = 0.411

Average Molecular Weight = 243.6

Number of Calibrated Peaks Found = 79

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).

Concentration = 8.30 ng/L

Total Nanomoles = 0.032

Average Molecular Weight = 257.5

Number of Calibrated Peaks Found = 2

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Total Concentration = 1070 ng/L 20.5 109

Total Nanomoles = 5.148

Average Molecular Weight = 208.0

Number of Calibrated Peaks Found = 81

Internal Standard Retention Time = 46.94 minutes

Internal Standard Peak Area = 147173.0

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: WNF-TRAN-090715-GI30MDOWN
Comment: HUDSON RIVER RAMP;COC090715-HNEA-01
Date Acquired: 07/16/2009 09:54:45
Lab Sample ID: AM10095
LRF ID: 09070149-07
Lab File ID: GC16-731-25

Type for Mixed Peak Deconvolution = S

Concentration = 1070 ng/L

Total Nanomoles = 5.148

Average Molecular Weight = 208.0

Number of Calibrated Peaks Found = 81

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Concentration = 1020 ng/L

Total Nanomoles = 4.964

Average Molecular Weight = 206.3

Number of Calibrated Peaks Found = 12

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360);

Total Concentration = 83.0 ng/L 5.08 20.5

Total Nanomoles = 0.335

Average Molecular Weight = 247.6

Number of Calibrated Peaks Found = 85

Internal Standard Retention Time = 46.94 minutes

Internal Standard Peak Area = 162113.8

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: WNF-TRAN-090715-GI30MDOWN-FILTER
Comment: HUDSON RIVER RAMP;COC090715-HNEA-01
Date Acquired: 07/24/2009 17:30:24
Lab Sample ID: AM10096
LRF ID: 09070149-08
Lab File ID: GC16-738-19

Type for Mixed Peak Deconvolution = S

Concentration = 83.0 ng/L

Total Nanomoles = 0.335

Average Molecular Weight = 247.6

Number of Calibrated Peaks Found = 85

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*
