Ocean Veritas PowerPoint Bullets for 7/1/2010
Operational Period: 6/30/2010 Sampling Period

- The Ocean Veritas left Port Fourchon on 6/29/2010 as a replacement for the RV Brooks McCall, which had an engine failure. Conditions today did not permit sampling.

- The Ocean Veritas reported the sea state to be 6-8 feet and wind south-southeast at 18-22 knts. Conditions are worse further out. The current forecast shows slightly worse conditions for tomorrow, with no significant improvement until 7/2/2010. They will continue to hold in their general location until the weather abates and sampling can being. The current plan for the Ocean Veritas is to stay out through their scheduled return (7/5/2010).

- Rototox results from samples collected on 6/28/2010 from Station OV073 indicated no significant mortality.
