Acquisition information
Start time: 19-Apr-2016 10:15:12
Live time: 1800
Real time: 1803
Dead time: 0.17 %
Detector ID: 1

Detector system
(ARS06) MCB 130

Calibration
Filename: 250mL Tuna Can 1748-90-1 calib poly.Clb
250mL Tuna Can 1748-90-1 Polynomial WJS 6-10-15

Energy Calibration
Created: 10-Jun-2015 12:26:28
Zero offset: 0.192 keV
Gain: 0.250 keV/channel
Quadratic: -2.864E-08 keV/channel^2

Efficiency Calibration
Created: 10-Jun-2015 12:34:11
Type: Polynomial
Uncertainty: 1.581 %
Coefficients: -0.368747 -4.257329 0.454276
-0.047622 0.001987 -0.000031

Library Files
Main analysis library: ITSI.Lib
Library Match Width: 0.500
Peak stripping: Library based

Analysis parameters
Analysis engine: Env32 G53W4.22
Start channel: 10 ( 2.69keV )
Stop channel: 8000 ( 1998.23keV )
Peak rejection level: 1000.000%
Peak search sensitivity: 3
Sample Size: 3.8051E+02
Activity scaling factor: 1.0000E+06/( 1.0000E+00* 3.8051E+02) =
2.6281E+03
Detection limit method: Reg. Guide 4.16 Method
Random error: 1.0000000E+00
Systematic error: 1.0000000E+00
Fraction Limit: 60.000%
Background width: average of five points.
Half lives decay limit: 12.000

American Radiation Services Spectrum name: ARS06817.An1

Activity range factor: 2.000
Min. step backg. energy 0.000
Multiplet shift channel 2.000

| Corrections | Status | Comments |

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.
\+ - Peak activity higher than counting uncertainty range.
\- - Peak activity lower than counting uncertainty range.

= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

| Nuclide Codes: | Peak Codes: |
|---|---|
| T - Thermal Neutron Activation | G - Gamma Ray |
| F - Fast Neutron Activation | X - X-Ray |
| I - Fission Product | P - Positron Decay |
| N - Naturally Occurring Isotope | S - Single-Escape |
| P - Photon Reaction | D - Double-Escape |
| C - Charged Particle Reaction | K - Key Line |
| M - No MDA Calculation | A - Not in Average |
| R - Coincidence Corrected | C - Coincidence Peak |
| H - Halflife limit exceeded | |

Quadratic: -2.864E-08 keV/channel^2

Efficiency Calibration
Created: 10-Jun-2015 12:34:11
Type: Polynomial
Uncertainty: 1.581 %
Coefficients: -0.368747 -4.257329 0.454276
-0.047622 0.001987 -0.000031

Library Files
Main analysis library: ITSI.Lib
Library Match Width: 0.500
Peak stripping: Library based

Analysis parameters
Analysis engine: Env32 G53W4.22
Start channel: 10 ( 2.69keV )
Stop channel: 8000 ( 1998.23keV )
Peak rejection level: 1000.000%
Peak search sensitivity: 3
Sample Size: 3.4746E+02
Activity scaling factor: 1.0000E+06/( 1.0000E+00* 3.4746E+02) =
2.8780E+03
Detection limit method: Reg. Guide 4.16 Method
Random error: 1.0000000E+00
Systematic error: 1.0000000E+00
Fraction Limit: 60.000%
Background width: average of five points.
Half lives decay limit: 12.000

American Radiation Services Spectrum name: ARS06940.An1

Activity range factor: 2.000
Min. step backg. energy 0.000
Multiplet shift channel 2.000

| Corrections | Status | Comments |

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.
\+ - Peak activity higher than counting uncertainty range.
\- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

| Nuclide Codes: | Peak Codes: |
|---|---|
| T - Thermal Neutron Activation | G - Gamma Ray |
| F - Fast Neutron Activation | X - X-Ray |
| I - Fission Product | P - Positron Decay |
| N - Naturally Occurring Isotope | S - Single-Escape |
| P - Photon Reaction | D - Double-Escape |
| C - Charged Particle Reaction | K - Key Line |
| M - No MDA Calculation | A - Not in Average |
| R - Coincidence Corrected | C - Coincidence Peak |
| H - Halflife limit exceeded | |

Library Files
Main analysis library: ITSI COUNT.Lib
Library Match Width: 0.500
Peak stripping: Library based

Analysis parameters
Analysis engine: Env32 G53W4.22
Start channel: 10 ( 2.59keV )
Stop channel: 8000 ( 2000.09keV )
Peak rejection level: 1000.000%
Peak search sensitivity: 3
Sample Size: 4.0574E+02
Activity scaling factor: 1.0000E+06/( 1.0000E+00* 4.0574E+02) =
2.4646E+03
Detection limit method: Reg. Guide 4.16 Method
Random error: 1.0000000E+00
Systematic error: 1.0000000E+00
Fraction Limit: 60.000%
Background width: average of five points.
Half lives decay limit: 12.000

American Radiation Services Spectrum name: ARS07858.An1

Activity range factor: 2.000
Min. step backg. energy 0.000
Multiplet shift channel 2.000

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.

% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide
failed one or more qualification tests.
+ - Peak activity higher than counting uncertainty range.
- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the
library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity
to be found directly.

| Nuclide Codes: | Peak Codes: |
|---|---|
| T - Thermal Neutron Activation | G - Gamma Ray |
| F - Fast Neutron Activation | X - X-Ray |
| I - Fission Product | P - Positron Decay |
| N - Naturally Occurring Isotope | S - Single-Escape |
| P - Photon Reaction | D - Double-Escape |
| C - Charged Particle Reaction | K - Key Line |
| M - No MDA Calculation | A - Not in Average |
| R - Coincidence Corrected | C - Coincidence Peak |
| H - Halflife limit exceeded | |

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.
+ - Peak activity higher than counting uncertainty range.
- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

| Nuclide Codes: | Peak Codes: |
|---|---|
| T - Thermal Neutron Activation | G - Gamma Ray |
| F - Fast Neutron Activation | X - X-Ray |
| I - Fission Product | P - Positron Decay |
| N - Naturally Occurring Isotope | S - Single-Escape |
| P - Photon Reaction | D - Double-Escape |
| C - Charged Particle Reaction | K - Key Line |
| M - No MDA Calculation | A - Not in Average |
| R - Coincidence Corrected | C - Coincidence Peak |
| H - Halflife limit exceeded | |

Main analysis library: ITSI.Lib
Library Match Width: 0.500
Peak stripping: Library based

Analysis parameters
Analysis engine: Env32 G53W4.24
Start channel: 10 ( 2.65keV )
Stop channel: 8000 ( 1998.60keV )
Peak rejection level: 1000.000%
Peak search sensitivity: 3
Sample Size: 3.9949E+02
Activity scaling factor: 1.0000E+06/( 1.0000E+00* 3.9949E+02) =
2.5032E+03
Detection limit method: Reg. Guide 4.16 Method
Random error: 1.0000000E+00
Systematic error: 1.0000000E+00
Fraction Limit: 60.000%
Background width: average of five points.
Half lives decay limit: 12.000

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.
\+ - Peak activity higher than counting uncertainty range.
\- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

| Nuclide Codes: | Peak Codes: |
|---|---|
| T - Thermal Neutron Activation | G - Gamma Ray |
| F - Fast Neutron Activation | X - X-Ray |
| I - Fission Product | P - Positron Decay |
| N - Naturally Occurring Isotope | S - Single-Escape |
| P - Photon Reaction | D - Double-Escape |
| C - Charged Particle Reaction | K - Key Line |
| M - No MDA Calculation | A - Not in Average |
| R - Coincidence Corrected | C - Coincidence Peak |
| H - Halflife limit exceeded | |

American Radiation Services Spectrum name: ARS07974.An1

Sample description
Batch ID: 16-00697-14
SDG: ARS1-16-00670-028 Tech: WJS

Spectrum Filename: C:\User\ARS07974.An1

Acquisition information
Start time: 05-May-2016 09:17:13
Live time: 2700
Real time: 2702
Dead time: 0.09 %
Detector ID: 1

Detector system
(ARS07) MCB 337

Calibration
Filename: POLYTuna Can 250mL 1559-72-6 calib.Clb
tuna can solid, 250 mL, 1.5 g/cc 1559-72-6, cal date 3/12/2012 W
WW

Energy Calibration
Created: 12-Mar-2012 13:33:38
Zero offset: 0.094 keV
Gain: 0.250 keV/channel
Quadratic: 8.603E-09 keV/channel^2

Efficiency Calibration
Created: 07-Jan-2014 11:11:14
Type: Polynomial
Uncertainty: 1.397 %
Coefficients: -0.410791 -4.427717 0.416964
-0.041400 0.001670 -0.000026

Library Files
Main analysis library: ITSI COUNT.Lib
Library Match Width: 0.500
Peak stripping: Library based

Analysis parameters
Analysis engine: Env32 G53W4.22
Start channel: 10 ( 2.59keV )
Stop channel: 8000 ( 2000.09keV )
Peak rejection level: 1000.000%
Peak search sensitivity: 3
Sample Size: 3.6033E+02
Activity scaling factor: 1.0000E+06/( 1.0000E+00* 3.6033E+02) =
2.7752E+03
Detection limit method: Reg. Guide 4.16 Method
Random error: 1.0000000E+00
Systematic error: 1.0000000E+00
Fraction Limit: 60.000%
Background width: average of five points.
Half lives decay limit: 12.000

Activity range factor: 2.000
Min. step backg. energy 0.000
Multiplet shift channel 2.000

| Corrections | Status | Comments |

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went
negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.

% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.
+ - Peak activity higher than counting uncertainty range.
- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

Nuclide Codes:
T - Thermal Neutron Activation
F - Fast Neutron Activation
I - Fission Product
N - Naturally Occurring Isotope
P - Photon Reaction
C - Charged Particle Reaction
M - No MDA Calculation
R - Coincidence Corrected
H - Halflife limit exceeded

Peak Codes:
G - Gamma Ray
X - X-Ray
P - Positron Decay
S - Single-Escape
D - Double-Escape
K - Key Line
A - Not in Average
C - Coincidence Peak

- - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -

American Radiation Services Spectrum name: ARS06818.An1

Sample description
Batch ID: 16-00564-13
SDG: ARS1-16-00670-029 Tech: WJS

Spectrum Filename: C:\User\ARS06818.An1

Acquisition information
Start time: 19-Apr-2016 10:48:26
Live time: 1800
Real time: 1803
Dead time: 0.18 %
Detector ID: 1

Detector system
(ARS06) MCB 130

Calibration
Filename: 250mL Tuna Can 1748-90-1 calib poly.Clb
250mL Tuna Can 1748-90-1 Polynomial WJS 6-10-15

Energy Calibration
Created: 10-Jun-2015 12:26:28
Zero offset: 0.192 keV
Gain: 0.250 keV/channel
Quadratic: -2.864E-08 keV/channel^2

Efficiency Calibration
Created: 10-Jun-2015 12:34:11
Type: Polynomial
Uncertainty: 1.581 %
Coefficients: -0.368747 -4.257329 0.454276
-0.047622 0.001987 -0.000031

Library Files
Main analysis library: ITSI.Lib
Library Match Width: 0.500
Peak stripping: Library based

Analysis parameters
Analysis engine: Env32 G53W4.22
Start channel: 10 ( 2.69keV )
Stop channel: 8000 ( 1998.23keV )
Peak rejection level: 1000.000%
Peak search sensitivity: 3
Sample Size: 3.5573E+02
Activity scaling factor: 1.0000E+06/( 1.0000E+00* 3.5573E+02) =
2.8111E+03
Detection limit method: Reg. Guide 4.16 Method
Random error: 1.0000000E+00
Systematic error: 1.0000000E+00
Fraction Limit: 60.000%
Background width: average of five points.
Half lives decay limit: 12.000

Activity range factor: 2.000
Min. step backg. energy 0.000
Multiplet shift channel 2.000

| Corrections | Status | Comments |
|---|---|---|
| Decay correct to date: | NO | |
| Decay during acquisition: | YES | |
| Decay during collection: | NO | |
| True coincidence correction: | NO | |
| Peaked background correction: | YES | pbc ITSI.Pbc 11-Aug-2014 08:02:01 |
| Absorption (Internal): | NO | |
| Geometry correction: | NO | |
| Random summing: | NO | |

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.

+ - Peak activity higher than counting uncertainty range.
- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

| Nuclide Codes: | Peak Codes: |
|---|---|
| T - Thermal Neutron Activation | G - Gamma Ray |
| F - Fast Neutron Activation | X - X-Ray |
| I - Fission Product | P - Positron Decay |
| N - Naturally Occurring Isotope | S - Single-Escape |
| P - Photon Reaction | D - Double-Escape |
| C - Charged Particle Reaction | K - Key Line |
| M - No MDA Calculation | A - Not in Average |
| R - Coincidence Corrected | C - Coincidence Peak |
| H - Halflife limit exceeded | |

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.
\+ - Peak activity higher than counting uncertainty range.
\- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

| Nuclide Codes: | Peak Codes: |
|---|---|

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.
\+ - Peak activity higher than counting uncertainty range.
\- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

| Nuclide Codes: | Peak Codes: |
|---|---|
| T - Thermal Neutron Activation | G - Gamma Ray |
| F - Fast Neutron Activation | X - X-Ray |
| I - Fission Product | P - Positron Decay |
| N - Naturally Occurring Isotope | S - Single-Escape |
| P - Photon Reaction | D - Double-Escape |

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.

ORTEC g v - i (3263) Env32 G53W4.24 4/19/2016 11:51:21
American Radiation Services Spectrum name: ARS05255.An1

+ - Peak activity higher than counting uncertainty range.
- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

| Nuclide Codes: | Peak Codes: |
|---|---|
| T - Thermal Neutron Activation | G - Gamma Ray |
| F - Fast Neutron Activation | X - X-Ray |

ORTEC g v - i (3135) Env32 G53W4.24 4/19/2016 12:22:17
American Radiation Services Spectrum name: ARS05255.An1

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.
+ - Peak activity higher than counting uncertainty range.
- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

| Nuclide Codes: | Peak Codes: |
|---|---|
| T - Thermal Neutron Activation | G - Gamma Ray |
| F - Fast Neutron Activation | X - X-Ray |
| I - Fission Product | P - Positron Decay |
| N - Naturally Occurring Isotope | S - Single-Escape |
| P - Photon Reaction | D - Double-Escape |
| C - Charged Particle Reaction | K - Key Line |
| M - No MDA Calculation | A - Not in Average |
| R - Coincidence Corrected | C - Coincidence Peak |
| H - Halflife limit exceeded | |

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.
\+ - Peak activity higher than counting uncertainty range.
\- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.
+ - Peak activity higher than counting uncertainty range.
- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.
\+ - Peak activity higher than counting uncertainty range.
\- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

Nuclide Codes:
T - Thermal Neutron Activation
F - Fast Neutron Activation

Peak Codes:
G - Gamma Ray
X - X-Ray

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.
\+ - Peak activity higher than counting uncertainty range.
\- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

Nuclide Codes:
T - Thermal Neutron Activation
F - Fast Neutron Activation
I - Fission Product
N - Naturally Occurring Isotope
P - Photon Reaction
C - Charged Particle Reaction
M - No MDA Calculation
R - Coincidence Corrected
H - Halflife limit exceeded

Peak Codes:
G - Gamma Ray
X - X-Ray
P - Positron Decay
S - Single-Escape
D - Double-Escape
K - Key Line
A - Not in Average
C - Coincidence Peak

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.
\+ - Peak activity higher than counting uncertainty range.
\- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

Nuclide Codes:
T - Thermal Neutron Activation
F - Fast Neutron Activation
I - Fission Product
N - Naturally Occurring Isotope
P - Photon Reaction

Peak Codes:
G - Gamma Ray
X - X-Ray
P - Positron Decay
S - Single-Escape
D - Double-Escape

C - Charged Particle Reaction
M - No MDA Calculation
R - Coincidence Corrected
H - Halflife limit exceeded
K - Key Line
A - Not in Average
C - Coincidence Peak

- - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.
\+ - Peak activity higher than counting uncertainty range.
\- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.

ORTEC g v - i (3263) Env32 G702W050 6/9/2015 10:35:59 AM
American Radiation Services Spectrum name: ARS08001.An1

% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.
+ - Peak activity higher than counting uncertainty range.
- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

| Nuclide Codes: | Peak Codes: |
|---|---|
| T - Thermal Neutron Activation | G - Gamma Ray |
| F - Fast Neutron Activation | X - X-Ray |
| I - Fission Product | P - Positron Decay |
| N - Naturally Occurring Isotope | S - Single-Escape |
| P - Photon Reaction | D - Double-Escape |
| C - Charged Particle Reaction | K - Key Line |
| M - No MDA Calculation | A - Not in Average |
| R - Coincidence Corrected | C - Coincidence Peak |
| H - Halflife limit exceeded | |

- - - -

**Method of Calibration:**

This source was prepared from weighed aliquots of solutions whose concentrations in µCi/g were determined by gamma spectrometry.

**Notes:**

- See reverse side for leak test(s) performed on this source.
- EZIP participates in a NIST measurement assurance program to establish and maintain implicit traceability for a number of nuclides, based on the blind assay (and later NIST certification) of Standard Reference Materials (as in NRC Regulatory Guide 4.15).
- Nuclear data was taken from IAEA-TECDOC-619, 1991.
- Overall uncertainty is calculated at the 99% confidence level.
- This source has a working life of 1 year.

**Method of Calibration:**

This source was prepared from weighed aliquots of solutions whose concentrations in µCi/g were determined by gamma spectrometry.

**Notes:**

- See reverse side for leak test(s) performed on this source.
- EZIP participates in a NIST measurement assurance program to establish and maintain implicit traceability for a number of nuclides, based on the blind assay (and later NIST certification) of Standard Reference Materials (as in NRC Regulatory Guide 4.15).
- Nuclear data was taken from IAEA-TECDOC-619, 1991.
- Overall uncertainty is calculated at the 99% confidence level.
- This source has a working life of 1 year.

| LaMarKa Code: 7923 | Customer Code: AMR-132 |
| Lot Number: 79233021510TR | Reported Value: N/A |
| Preparation Date: 10-Feb-15 | Tolerance +-: 0.01 GPL |
| Expiration Date: 09-Aug-15 | |

All glassware used in the manufacture of this product is of the Class A type. All Volumetric glassware has been calibrated in accordance with ASTM E 542 and is traceable to NIST.

All balances used in the manufacture of this product are calibrated on a daily basis with NIST traceable weights. The balances are maintained and serviced on a regular basis by certified balance specialist.

All chemicals used in the manufacture of this product are ACS reagent grade chemicals unless specified by the customer.

A Quality Management Program governs each and every step of the manufacturing process for this product. Traceability from LaMarKa lot numbers to original manufacturer lot numbers is maintained and available.

## Standard Radionuclide Source

73518-526

Th-230 47 mm Diameter x 0.9 mm Thick Stainless Steel Disk in Stainless Steel Planchet

This standard radionuclide source was prepared by electro-deposition of Th-230 onto a stainless steel disk. Th-230 activity was determined with a ZnS scintillation detector. The calibration was checked by alpha spectroscopy after source preparation.

Analytics maintains traceability to the National Institute of Standards and Technology through Measurements Assurance Programs as described in USNRC Regulatory Guide 4.15, Rev. 1.

# CERTIFICATE OF CALIBRATION
## Standard Radionuclide Source

73522-526

Sr-90 in Aluminized Mylar on 47 mm Diameter Aluminum Ring

This standard radionuclide source was prepared gravimetrically from a calibrated master solution. The master solution was calibrated by liquid scintillation counting. The calibration was checked by beta counting after source preparation.

ANALYTICS maintains traceability to the National Institute of Standards and Technology through Measurements Assurance Programs as described in USNRC Reg. Guide 4.15, Revision 1.

| | |
|---|---|
| ISOTOPE: | Sr-90 |
| ACTIVITY (dps): | 1.826 E2 |
| HALF-LIFE: | 28.79 years |
| CALIBRATION DATE: | October 9, 2006 12:00 EST |
| RELATIVE EXPANDED UNCERTAINTY (k=2): | 3.3% |

Impurities: $\gamma$-impurities <0.1%

Diameter of active area: 33 mm. 0.8 mg/cm$^2$ aluminized mylar.

No expiration date has been given for this source due to the fragile nature of the mylar covering. This source should be carefully tested for leakage at least every six months. If leakage is detected this source should be disposed of by approved radioactive waste disposal procedures.

NOTE: This source also contains Y-90 in secular equilibrium with Sr-90. The Y-90 activity is equal to the Sr-90 activity. Since Sr-90 and Y-90 both decay 100% by beta emission, the total beta activity for the source is twice the certified Sr-90 activity. The half-life for Y-90 is 64.08 hours.

U = The associated value is not detected.

Additional Footnotes

In cases where the result is considered non-detect and the MDA of the result exceeded the screening criteria, the reported activity for the affected isotope has been replaced with the reported MDA.

| **Received Date:** | 03/28/2016 |
| **Report Date:** | 05/09/2016 |

## SAMPLE RECEIPT

The samples were received in good condition. The samples were screened for radioactive contamination as per procedure **ARS-062 "Sample Receiving"**.

## ANALYTICAL DATA

This data package contains sample and QC results for sixteen (16) soil samples requested for the above referenced project on 03/28/16.

The analysis for gamma spectroscopy were performed using **SOP ARS-007/EPA 901.1M.** A 21-day ingrowth period was performed on these samples. The Ra-226 results were taken from the Bi-214 activity, the Th-232 results were taken from the Ra-228 activity and the Th-234 results were taken from the U-238 activity.

The analysis for Strontium was performed using **SOP ARS-032/Eichrom SRW-01.**

The following analytical batches are associated with these samples: ARS1-B16-00564 and ARS1-B16-00565 for EPA 901.1M and ARS1-B16-00514 for Strontium.

For Gamma Spec batch ARS1-B16-00564, sample 04-PD-RO-09-01 (ARS1-16-00670-021) was used as the sample duplicate and for batch ARS1-B16-00565, sample 04-PD-STK-01-11 (ARS1-16-00671-011) was designated as the sample duplicate. Lastly, for Strontium batch ARS1-B16-00514 the sample used for the sample duplicate was 07-PE-0068-21 (ARS1-16-00645-021).

The result data that are flagged with "U" indicate that the activity is below the MDC.

Sample results are being reported on "dry weight" basis.

On May 5, 2016, the following samples were recounted to meet the detection limit for Cs-137. The samples are ARS1-16-00671-001, 003, 004, 007, 008, 009, 010, 012, 013 and 025. The respective ITSI Gilbane identifications are 04-PD-STK-01-01, 03, 04, 07, 08, 09, 10, 12, 13 and 15. Sample ARS1-16-00671-015 (04-PD-STK-01-15) was recounted on May 5, 2016 to also meet the detection limit for Ra-226.

**American Radiation Services Project Manager/Laboratory Director's Comments:**

*"I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this sample data package and the computer-readable EDD, as applicable, submitted on diskette or by modem, has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature. I certify that this electronic image and all hardcopies produced from this image accurately represent the data and is in compliance with the company specific requirements, both technically and for completeness, other than the conditions detailed above or in the sample data package narrative. Release, by submission through email, the data contained in this electronic image and the computer-readable EDD (as applicable), has been authorized by the laboratory Manager/Technical Director or the Manager's designee."*

# Notes (Case Narrative):

## Comments:

1.0) All MDA/MDC values are calculated on a sample specific basis.
2.0) Soil and Sludge analysis are reported on a wet basis or an as received basis unless otherwise indicated.
3.0) Data in this report are within the limits of uncertainty specified in the reference method unless otherwise specified.
4.0) Modified analysis procedures are procedures that are modified to meet the certain specifications. An example may be the use of a water method to analyze a solid matrix due to the lack of an officially recognized procedure for the analysis of the solid matrix. Modified analyses are indicated by the subsequent addition of "m" to the procedure number (i.e. 900.0M).
5.0) Total activity is actually total gamma activity and is determined utilizing the prominent gamma emitters from the naturally occurring radioactive decay chains and other prominent radioactive nuclides. Total activity may be lower than the actual total activity due to the extent of secular equilibrium achieved in the various decay chains at the time of analysis. The total activity is not representative of nuclides that emit solely alpha or beta particles.
6.0) Ra-228 is determined via secular equilibrium with its daughter, Actinium 228 (Gamma Spectroscopy only).
7.0) U-238 is determined via secular equilibrium with its daughter, Thorium 234 (Gamma Spectroscopy only).
8.0) All gamma spectroscopy was performed utilizing high purity germanium detectors (**HPGe**).
9.0) ARS makes every attempt to match sample density to calibrated density; however, in some cases, it is not practical or possible to do so and data results may be affected (Gamma Spectroscopy only).
10.0) Gamma spectroscopy results are calculated values based on the **ORTEC®** GammaVision ENV32 Analysis Engine.
11.0) ACLASS DOD and ISO 17025 certification applies only to the following analytes and methods: Gross Alpha and Gross Beta (EPA 900, SM7110B&C, SW846 9310); Radium 226 (EPA 903, EPA 903.1, SM 7500 Ra-B, SW846 9315); Radium 228 (EPA 904, SM 7500 Ra-B SW846 9320); Iodine-131(EPA 901.1); Uranium by ICPMS (EPA 200.8); Strontium 89/90 (EPA 905, Eichrom SRW01, HASL 300 Sr-03-RC); Tritium (EPA 906, EPA 906M); Gamma Emitters (EPA 901.1, SM7120B, HASL 300 Ga-01-R); Americium-241, Curium 242/244, Plutonium 239/240 and 241, Thorium 228/230/232, Uranium 234/233 and 238 (Eichrom ACW03 VBS); Lead 210 (HASL 300 Pb-01-RC, Eichrom OTW01); Polonium 210 (HASL 300 Po-01-RC, HASL 300 Po-02-RC); Technetium-99 (Eichrom TCW02, Eichrom TCS01M).

## Definitions:

| | |
|---|---|
| **CRDL** | Contract Required Detection Limit |
| **CSU** | Combined Standard Uncertainty |
| **DLC** | Decision Level Concentration (ANSI N42.23) or critical level |
| **DO** | Duplicate Original |
| **DUP** | Method Duplicate |
| **LCS/LCSD** | Laboratory Control Sample/Laboratory Control Sample Duplicate |
| **MDA** | Minimum Detectable Activity |
| **MDC** | (Minimum Detectable Concentration) minimum concentration of the analyte that ARS can detect utilizing the specific analysis |
| **MBL** | Method Blank |
| **MS/MSD** | Matrix Spike/Matrix Spike Duplicate |
| **N/A** | Not Applicable |
| **NP** | Not Provided |
| **NR** | Not Referenced |

## Data Qualifiers:

| | |
|---|---|
| **B** | The analyte is found in both the associated method blank and the sample. This flag indicates probable blank contamination. |
| **D** | Sample analysis accomplished through dilution. |
| **J** | Reported result is approximated as it falls outside instrument calibration limits. |
| **Q** | One or more quality control criteria failed (e.g., LCS recovery, surrogate spike recovery, or CCV recovery). |
| **S** | Spike |
| ***SC** | Subcontracted out to another qualified laboratory |
| **U** | Activity is below the MDC or MDL |

**After printing this label**:
1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
2. Fold the printed page along the horizontal line.
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

**Warning**: Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.
Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com.FedEx will not be responsible for any claim in excess of $100 per package, whether the result of loss, damage, delay, non-delivery,misdelivery,or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim.Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental,consequential, or special is limited to the greater of $100 or the authorized declared value. Recovery cannot exceed actual documented loss.Maximum for items of extraordinary value is $1,000, e.g. jewelry, precious metals, negotiable instruments and other items listed in our ServiceGuide. Written claims must be filed within strict time limits, see current FedEx Service Guide.

Surveyors' Name: _____ Date/Time Surveyed: 3-28-16 1021

**After printing this label:**

1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
2. Fold the printed page along the horizontal line.
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

**Warning**: Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.

Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com. FedEx will not be responsible for any claim in excess of $100 per package, whether the result of loss, damage, delay, non-delivery, misdelivery, or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim. Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental, consequential, or special is limited to the greater of $100 or the authorized declared value. Recovery cannot exceed actual documented loss. Maximum for items of extraordinary value is $1,000, e.g. jewelry, precious metals, negotiable instruments and other items listed in our ServiceGuide. Written claims must be filed within strict time limits, see current FedEx Service Guide.

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.
\+ - Peak activity higher than counting uncertainty range.
\- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

Nuclide Codes:
T - Thermal Neutron Activation
F - Fast Neutron Activation
I - Fission Product
N - Naturally Occurring Isotope
P - Photon Reaction
C - Charged Particle Reaction
M - No MDA Calculation
R - Coincidence Corrected
H - Halflife limit exceeded

Peak Codes:
G - Gamma Ray
X - X-Ray
P - Positron Decay
S - Single-Escape
D - Double-Escape
K - Key Line
A - Not in Average
C - Coincidence Peak

- - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.
+ - Peak activity higher than counting uncertainty range.
- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

Nuclide Codes:
T - Thermal Neutron Activation
F - Fast Neutron Activation
I - Fission Product
N - Naturally Occurring Isotope
P - Photon Reaction
C - Charged Particle Reaction
M - No MDA Calculation
R - Coincidence Corrected
H - Halflife limit exceeded

Peak Codes:
G - Gamma Ray
X - X-Ray
P - Positron Decay
S - Single-Escape
D - Double-Escape
K - Key Line
A - Not in Average
C - Coincidence Peak

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.
\+ - Peak activity higher than counting uncertainty range.
\- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

Nuclide Codes:
T - Thermal Neutron Activation
F - Fast Neutron Activation
I - Fission Product
N - Naturally Occurring Isotope
P - Photon Reaction

Peak Codes:
G - Gamma Ray
X - X-Ray
P - Positron Decay
S - Single-Escape
D - Double-Escape

American Radiation Services Spectrum name: ARS06819.An1

C - Charged Particle Reaction
M - No MDA Calculation
R - Coincidence Corrected
H - Halflife limit exceeded
K - Key Line
A - Not in Average
C - Coincidence Peak

- - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.

0.88 Spectrum name: ARS01320.An1

% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide
failed one or more qualification tests.
+ - Peak activity higher than counting uncertainty range.
- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the
library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity
to be found directly.

| Nuclide Codes: | Peak Codes: |
|---|---|
| T - Thermal Neutron Activation | G - Gamma Ray |
| F - Fast Neutron Activation | X - X-Ray |

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.

% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.
+ - Peak activity higher than counting uncertainty range.
- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

Nuclide Codes:
T - Thermal Neutron Activation
F - Fast Neutron Activation
I - Fission Product
N - Naturally Occurring Isotope
P - Photon Reaction
C - Charged Particle Reaction
M - No MDA Calculation
R - Coincidence Corrected
H - Halflife limit exceeded

Peak Codes:
G - Gamma Ray
X - X-Ray
P - Positron Decay
S - Single-Escape
D - Double-Escape
K - Key Line
A - Not in Average
C - Coincidence Peak

- - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -

American Radiation Services Spectrum name: ARS05256.An1

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.
+ - Peak activity higher than counting uncertainty range.
- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

| Nuclide Codes: | Peak Codes: |
|---|---|
| T - Thermal Neutron Activation | G - Gamma Ray |
| F - Fast Neutron Activation | X - X-Ray |
| I - Fission Product | P - Positron Decay |
| N - Naturally Occurring Isotope | S - Single-Escape |
| P - Photon Reaction | D - Double-Escape |
| C - Charged Particle Reaction | K - Key Line |
| M - No MDA Calculation | A - Not in Average |
| R - Coincidence Corrected | C - Coincidence Peak |
| H - Halflife limit exceeded | |

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.
+ - Peak activity higher than counting uncertainty range.
- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

| Nuclide Codes: | Peak Codes: |
|---|---|
| T - Thermal Neutron Activation | G - Gamma Ray |
| F - Fast Neutron Activation | X - X-Ray |
| I - Fission Product | P - Positron Decay |
| N - Naturally Occurring Isotope | S - Single-Escape |
| P - Photon Reaction | D - Double-Escape |

0.88 Spectrum name: ARS01220.An1

C - Charged Particle Reaction
M - No MDA Calculation
R - Coincidence Corrected
H - Halflife limit exceeded
K - Key Line
A - Not in Average
C - Coincidence Peak

s - Peak fails shape tests.
D - Peak area deconvoluted.
L - Peak written from unknown list.
C - Area < Critical level.

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.
\+ - Peak activity higher than counting uncertainty range.
\- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

| Nuclide Codes: | Peak Codes: |
|---|---|
| T - Thermal Neutron Activation | G - Gamma Ray |
| F - Fast Neutron Activation | X - X-Ray |
| I - Fission Product | P - Positron Decay |
| N - Naturally Occurring Isotope | S - Single-Escape |

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.
\+ - Peak activity higher than counting uncertainty range.
\- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

Nuclide Codes:
T - Thermal Neutron Activation
F - Fast Neutron Activation
I - Fission Product
N - Naturally Occurring Isotope
P - Photon Reaction
C - Charged Particle Reaction
M - No MDA Calculation
R - Coincidence Corrected
H - Halflife limit exceeded

Peak Codes:
G - Gamma Ray
X - X-Ray
P - Positron Decay
S - Single-Escape
D - Double-Escape
K - Key Line
A - Not in Average
C - Coincidence Peak

- - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -

  # - All peaks for activity calculation had bad shape.
  * - Activity omitted from total
  & - Activity omitted from total and all peaks had bad shape.
  < - MDA value printed.
  A - Activity printed, but activity < MDA.
  B - Activity < MDA and failed test.
  C - Area < Critical level.
  F - Failed fraction or key line test.
  H - Halflife limit exceeded

American Radiation Services Spectrum name: ARS05352.An1

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.
+ - Peak activity higher than counting uncertainty range.
- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

| Nuclide Codes: | Peak Codes: |
|---|---|
| T - Thermal Neutron Activation | G - Gamma Ray |
| F - Fast Neutron Activation | X - X-Ray |
| I - Fission Product | P - Positron Decay |
| N - Naturally Occurring Isotope | S - Single-Escape |
| P - Photon Reaction | D - Double-Escape |
| C - Charged Particle Reaction | K - Key Line |
| M - No MDA Calculation | A - Not in Average |
| R - Coincidence Corrected | C - Coincidence Peak |
| H - Halflife limit exceeded | |

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.

0.88 Spectrum name: ARS01322.An1

+ - Peak activity higher than counting uncertainty range.
- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

| Nuclide Codes: | Peak Codes: |
|---|---|
| T - Thermal Neutron Activation | G - Gamma Ray |
| F - Fast Neutron Activation | X - X-Ray |
| I - Fission Product | P - Positron Decay |
| N - Naturally Occurring Isotope | S - Single-Escape |
| P - Photon Reaction | D - Double-Escape |
| C - Charged Particle Reaction | K - Key Line |
| M - No MDA Calculation | A - Not in Average |
| R - Coincidence Corrected | C - Coincidence Peak |
| H - Halflife limit exceeded | |

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went
negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide
failed one or more qualification tests.
+ - Peak activity higher than counting uncertainty range.

ORTEC g v - i (3263) Env32 G702W050 4/19/2016 1:30:38 PM
Spectrum name: ARS08226.An1

- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

Nuclide Codes:
T - Thermal Neutron Activation
F - Fast Neutron Activation
I - Fission Product
N - Naturally Occurring Isotope
P - Photon Reaction
C - Charged Particle Reaction
M - No MDA Calculation
R - Coincidence Corrected
H - Halflife limit exceeded

Peak Codes:
G - Gamma Ray
X - X-Ray
P - Positron Decay
S - Single-Escape
D - Double-Escape
K - Key Line
A - Not in Average
C - Coincidence Peak

- - - -

Zero offset: 0.192 keV
Gain: 0.250 keV/channel
Quadratic: -2.864E-08 keV/channel^2

Efficiency Calibration
Created: 10-Jun-2015 12:34:11
Type: Polynomial
Uncertainty: 1.581 %
Coefficients: -0.368747 -4.257329 0.454276
-0.047622 0.001987 -0.000031

Library Files
Main analysis library: ITSI.Lib
Library Match Width: 0.500
Peak stripping: Library based

Analysis parameters
Analysis engine: Env32 G53W4.22
Start channel: 10 ( 2.69keV )
Stop channel: 8000 ( 1998.23keV )
Peak rejection level: 1000.000%
Peak search sensitivity: 3
Sample Size: 3.5708E+02
Activity scaling factor: 1.0000E+06/( 1.0000E+00* 3.5708E+02) =
2.8005E+03
Detection limit method: Reg. Guide 4.16 Method
Random error: 1.0000000E+00
Systematic error: 1.0000000E+00
Fraction Limit: 60.000%
Background width: average of five points.
Half lives decay limit: 12.000

American Radiation Services Spectrum name: ARS06943.An1

Activity range factor: 2.000
Min. step backg. energy 0.000
Multiplet shift channel 2.000

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.
+ - Peak activity higher than counting uncertainty range.
- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

Nuclide Codes:
T - Thermal Neutron Activation
F - Fast Neutron Activation
I - Fission Product
N - Naturally Occurring Isotope
P - Photon Reaction
C - Charged Particle Reaction
M - No MDA Calculation
R - Coincidence Corrected
H - Halflife limit exceeded

Peak Codes:
G - Gamma Ray
X - X-Ray
P - Positron Decay
S - Single-Escape
D - Double-Escape
K - Key Line
A - Not in Average
C - Coincidence Peak

- - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -

s - Peak fails shape tests.
D - Peak area deconvoluted.
L - Peak written from unknown list.
C - Area < Critical level.
M - Peak is close to a library peak.

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.
\+ - Peak activity higher than counting uncertainty range.
\- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

| Nuclide Codes: | Peak Codes: |
|---|---|
| T - Thermal Neutron Activation | G - Gamma Ray |
| F - Fast Neutron Activation | X - X-Ray |
| I - Fission Product | P - Positron Decay |
| N - Naturally Occurring Isotope | S - Single-Escape |
| P - Photon Reaction | D - Double-Escape |
| C - Charged Particle Reaction | K - Key Line |
| M - No MDA Calculation | A - Not in Average |
| R - Coincidence Corrected | C - Coincidence Peak |
| H - Halflife limit exceeded | |

  # - All peaks for activity calculation had bad shape.
  * - Activity omitted from total
  & - Activity omitted from total and all peaks had bad shape.
  < - MDA value printed.
  A - Activity printed, but activity < MDA.
  B - Activity < MDA and failed test.
  C - Area < Critical level.
  F - Failed fraction or key line test.
  H - Halflife limit exceeded

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went
negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide
failed one or more qualification tests.
\+ - Peak activity higher than counting uncertainty range.
\- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the
library energy centroid for positive identification.
P - Peakbackground subtraction
) - Peak is too close to another for the activity
to be found directly.

Nuclide Codes: Peak Codes:

\# - All peaks for activity calculation had bad shape.
* - Activity omitted from total
& - Activity omitted from total and all peaks had bad shape.
< - MDA value printed.
A - Activity printed, but activity < MDA.
B - Activity < MDA and failed test.
C - Area < Critical level.
F - Failed fraction or key line test.
H - Halflife limit exceeded

s - Peak fails shape tests.
D - Peak area deconvoluted.
L - Peak written from unknown list.
C - Area < Critical level.
M - Peak is close to a library peak.

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.
\+ - Peak activity higher than counting uncertainty range.
\- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

Nuclide Codes:
T - Thermal Neutron Activation
F - Fast Neutron Activation
I - Fission Product
N - Naturally Occurring Isotope
P - Photon Reaction
C - Charged Particle Reaction
M - No MDA Calculation
R - Coincidence Corrected
H - Halflife limit exceeded

Peak Codes:
G - Gamma Ray
X - X-Ray
P - Positron Decay
S - Single-Escape
D - Double-Escape
K - Key Line
A - Not in Average
C - Coincidence Peak

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.

+ - Peak activity higher than counting uncertainty range.
- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

| Nuclide Codes: | Peak Codes: |
|---|---|
| T - Thermal Neutron Activation | G - Gamma Ray |
| F - Fast Neutron Activation | X - X-Ray |
| I - Fission Product | P - Positron Decay |
| N - Naturally Occurring Isotope | S - Single-Escape |
| P - Photon Reaction | D - Double-Escape |
| C - Charged Particle Reaction | K - Key Line |
| M - No MDA Calculation | A - Not in Average |
| R - Coincidence Corrected | C - Coincidence Peak |
| H - Halflife limit exceeded | |

# - All peaks for activity calculation had bad shape.
* - Activity omitted from total
& - Activity omitted from total and all peaks had bad shape.
< - MDA value printed.
A - Activity printed, but activity < MDA.
B - Activity < MDA and failed test.
C - Area < Critical level.
F - Failed fraction or key line test.
H - Halflife limit exceeded

# Preanalytical
# Sample Preparation Review Checklist

**Prep Batch/SDG:** ARS1-16-00671 **Sample Matrix:** SO

☐ Check if sample(s) are re-prepped

**SAMPLE PREPARATION**

| (All "No" Responses Require a Comment) | Prep. Tech. Review | |
|---|---|---|
| 1) Sample IDs Correspond to LIMS SDG Information? | Yes No N/A | |
| 2) Drying Oven Temperature Check is within Tolerance? | Yes No N/A | |
| 3) Balance checks are current and balance is in tolerance? | Yes No N/A | |
| 4) Cleanliness of preparation equipment has been verified? (Including grinders, mortar & pestle, spatulas, etc...) | Yes No N/A | |
| 5) Samples Dried? | Yes No N/A | |
| 6) 100% of Manual Transcriptions/Calculations Verified? | Yes No N/A | |
| 7) Samples ground/pulverized? (*if YES, a PrepBlank is required*) | Yes No N/A | |
| a) If PrepBlank Required, Enter the PrepBlank SDG Here → | ARS1- | |
| 8) Samples ground with Mortar & Pestle? (*PrepBlank is not required*) | Yes No N/A | |
| 9) Samples crushed with hammer? (*PrepBlank is not required*) | Yes No N/A | |
| 10) Visual Inspection Verifies Homogenization Method(s) Effective? | Yes No N/A | |
| 11) Preparation area is clean and decontaminated? | Yes No N/A | |

12) Sample Prep Anomaly? ☒ No ☐ Yes (See Tech Notes) NCR # (If initiated): _____

# - All peaks for activity calculation had bad shape.
* - Activity omitted from total
& - Activity omitted from total and all peaks had bad shape.
< - MDA value printed.
A - Activity printed, but activity < MDA.
B - Activity < MDA and failed test.
C - Area < Critical level.
F - Failed fraction or key line test.
H - Halflife limit exceeded

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.
\+ - Peak activity higher than counting uncertainty range.
\- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

Nuclide Codes:
T - Thermal Neutron Activation
F - Fast Neutron Activation

Peak Codes:
G - Gamma Ray
X - X-Ray

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.
\+ - Peak activity higher than counting uncertainty range.
\- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

Nuclide Codes:
T - Thermal Neutron Activation
F - Fast Neutron Activation
I - Fission Product
N - Naturally Occurring Isotope
P - Photon Reaction

Peak Codes:
G - Gamma Ray
X - X-Ray
P - Positron Decay
S - Single-Escape
D - Double-Escape

C - Charged Particle Reaction
M - No MDA Calculation
R - Coincidence Corrected
H - Halflife limit exceeded
K - Key Line
A - Not in Average
C - Coincidence Peak

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.
% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.
\+ - Peak activity higher than counting uncertainty range.
\- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

| Nuclide Codes: | Peak Codes: |

( - This peak used in the nuclide activity average.

* - Peak is too wide, but only one peak in library.
! - Peak is part of a multiplet and this area went negative during deconvolution.
? - Peak is too narrow.
@ - Peak is too wide at FW25M, but ok at FWHM.

ORTEC g v - i (3263) Env32 G702W050 6/9/2015 10:35:59 AM
American Radiation Services Spectrum name: ARS08001.An1

% - Peak fails sensitivity test.
$ - Peak identified, but first peak of this nuclide failed one or more qualification tests.
+ - Peak activity higher than counting uncertainty range.
- - Peak activity lower than counting uncertainty range.
= - Peak outside analysis energy range.
& - Calculated peak centroid is not close enough to the library energy centroid for positive identification.
P - Peakbackground subtraction
} - Peak is too close to another for the activity to be found directly.

Nuclide Codes:
T - Thermal Neutron Activation
F - Fast Neutron Activation
I - Fission Product
N - Naturally Occurring Isotope
P - Photon Reaction
C - Charged Particle Reaction
M - No MDA Calculation
R - Coincidence Corrected
H - Halflife limit exceeded

Peak Codes:
G - Gamma Ray
X - X-Ray
P - Positron Decay
S - Single-Escape
D - Double-Escape
K - Key Line
A - Not in Average
C - Coincidence Peak

- - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -

**ENVIRONMENTAL SERVICES**

The waste identified on manifest number 010189790 JJK, and bearing the California Waste Code 151 is subject to land and disposal restrictions contained in article 40, Title 22, California Code of Regulations. The waste meets the definition of a treated hazardous waste pursuant to Health and Safety Code (H&SC) Section 25179.6 (Waste Analysis is attached for these waste, where available).

As required by Article 40, Title 22, California Code of Regulations, the following certification is made on behalf of the below named generator whose name appears on the above-listed manifest, for these restricted wastes:

**I WARRANT THAT I AM AN AUTHORIZED REPRESENTATIVE OF THE BELOW-NAMED GENERATOR. I CERTIFY UNDER PENALTY OF LAW THAT THE WASTE IS CONSIDERED TREATED IN ACCORDANCE WITH H&SC SECTION 25179.3 (1)(2) AND COMPLIES WITH ALI APPLICABLE PROHIBITIONS SET FORTH IN H&SC SECTION 25179.6. I BELIEVE THAT THI INFORMATION I SUBMITTED IS TRUE, ACCURATE AND COMPLETE. I AM AWARE THAT THERE ARE SIGNIFICANT PENALTIES FOR SUBMITTING A FALSE CERTIFICATION, INCLUDING THE POSSIBILITY OF FINE AND IMPRISONMENT.**

Summary of Pathway Selections

| Pathway | User Selection |
|---|---|
| 1 -- external gamma | active |
| 2 -- inhalation (w/o radon) | active |
| 3 -- plant ingestion | suppressed |
| 4 -- meat ingestion | suppressed |
| 5 -- milk ingestion | suppressed |
| 6 -- aquatic foods | suppressed |
| 7 -- drinking water | suppressed |
| 8 -- soil ingestion | active |
| 9 -- radon | suppressed |
| Find peak pathway doses | suppressed |

Summary : Survey Unit 04-PD-SB-14S (with Ingestion Pathways turned off)
File : C:\RESRAD_FAMILY\ONSITE\7.2\USERFILES\SITE1.RAD

| Contaminated Zone Dimensions | | Initial Soil Concentrations, pCi/g | |
|---|---|---|---|
| Area: | 1000.00 square meters | Cs-137 | 5.900E-02 |
| Thickness: | 2.00 meters | Ra-226 | 9.400E-02 |
| Cover Depth: | 0.00 meters | Sr-90 | 1.330E-01 |

Total Dose TDOSE(t), mrem/yr
Basic Radiation Dose Limit = 2.500E+01 mrem/yr
Total Mixture Sum M(t) = Fraction of Basic Dose Limit Received at Time (t)

| t (years): | 0.000E+00 | 1.000E+00 | 3.000E+00 | 1.000E+01 | 3.000E+01 | 1.000E+02 | 3.000E+02 | 1.000E+03 |
|---|---|---|---|---|---|---|---|---|
| TDOSE(t): | 6.325E-01 | 6.292E-01 | 6.228E-01 | 6.014E-01 | 5.487E-01 | 4.241E-01 | 2.367E-01 | 3.316E-02 |

| **Document Reviewed:** | ***Removal Action Completion Report Parcel D-1 Phase II Radiological Remediation and Support***, Hunters Point Naval Shipyard, San Francisco, California. | **Date of Document:** | DRAFT Aug 2017<br>DRAFT FINAL Jan 2017 |
| **Project Site:** | Parcel D-1, Hunters Point Naval Shipyard, San Francisco, California | | |

| **Reviewer:** | Department of Toxic Substances Control (DTSC) Comments from Ms. Juanita Bacey, Project Manager Brownfields and Environmental Restoration Program | **Date of Comments** | Email correspondence dated 13 Nov 2017 |
|---|---|---|---|

| Item | Review Comment | Navy Response |
|---|---|---|
| 1 | (***DTSC General Comment #1***) The RACR indicates that sampling and surveys were limited to a depth of 2 ft bgs and that there is a potential for radiological objects to be present in material below 2 ft bgs. Therefore, an unrestricted free release is not possible for this parcel and a Covenant to Restrict the Use of Property (CRUP) will be required. The Conclusion section of the first two documents (are) above recommend unrestricted release. Please revise. | The Final Status Survey (FSS) reports for the former NRDL site and the ship berths have been modified to no longer recommend release to unrestricted use. The two FSS reports are revised to remove the unrestricted release recommendation. They now state that the surface soil and structures meet the Navy's cleanup goals as a result of the MARSSIM based investigation; however, the potential for radiological objects (RO) below 2 feet bgs remains. A LUC/RD addendum will be prepared to address the potential for ROs in subsurface below 2 feet bgs only within the 1946 shoreline expansion area and a buffer that encompasses all recovered ROs at Parcel D-1. |

| **Reviewer:** | **California Department of Public Health (CDPH) Comments** from Mr. Roger Lupo, via email to Ms. Juanita Bacey, Project Manager, Brownfields & Environmental Restoration, Department of Toxic Substances Control (DTSC) *(This review was performed in support of the Interagency Agreement between DTSC and CDPH.)* | **Date of Comments** | Email correspondence dated 14 Nov 2017 |

|---|---|---|
| 2 | (***CDPH General Comment #1 from R. Lupo***) In the executive summary on page viii, the text talks of the potential for radioactive objects (RO) below two foot of the ground surface, this will require a land use covenant detailing the need for protective measures in the advent of future soil excavation. Measures to include notification of public of the potential for finding RO's during excavation, notification of the workers | Comment is noted. Discussion regarding suitability for unrestricted release has been removed. A LUC/RD addendum will be prepared spelling out any particular additional or different specific requirements/conditions/ notifications for implementing the institutional controls (ICs) appropriately to address the potential for ROs |

|---|---|---|
| | of the potential for finding RO's, the need to have Health Physics support during excavation for the protection of the workers and of the public. Measures to include engineered barriers and administrative protective actions to protect the health and safety of the site workers and the public. I am probably getting ahead of the process in mentioning a LUC at this time, but thought I would get the idea started. | below 2 feet bgs within the 1946 shoreline expansion area. |

| Reviewer: | **California Department of Public Health (CDPH) Comments** from Dr. Sheetal Singh, PhD, Sr Health Physicist, Environmental Management Branch (EMS) via letter addressed to Ms. Juanita Bacey of DTSC *(This review was performed in support of the Interagency Agreement between DTSC and CDPH.)* | **Date of Comments** | 15 Nov 2017 |
|---|---|---|---|

| Item | Review Comment | Navy Response |
|---|---|---|
| 3 | ***(CDPH General Comment #1)*** The cover page of this work plan does not have appropriate signatures by technical lead and project manager for this project. Please include appropriate signatures in the revised version of the document. | Signatures will be added to the final report. |
| 4 | ***(CDPH General Comment #2)*** It is EMB's understanding that the Navy is requesting radiological unrestricted release recommendation (RURR) from CDPH for the first two feet of soil below the ground surface and the soil below the two feet require institutional controls for the following:<br>• Remaining sanitary sewer and storm drain line (SSSD) (Work Packages 108, 109, 110 and 111)<br>• Former Naval Radiological Defense Laboratory (NRDL Site),<br>• Ship Berths 14, 21, 22 and 29 | The comment is noted. The FSS reports for the former NRDL site and ship berths have been modified to no longer recommend release to unrestricted use for the surface soil and structures due to the potential that remains for ROs below 2 feet bgs. Unrestricted release request and no further action recommendation for removed SSSD lines are warranted except for those SSSD trenches located within the 1946 shoreline expansion area and a buffer around the 1946 shoreline |

| | • Railroad tie stockpiles<br>Please note that CDPH-EMB cannot approve RURR for the first two feet of all areas of Parcel D-1 Phase II as in these designated areas discrete radiological objects exist below 2 feet. If the Navy plans to implement land use controls and activity restrictions below the two feet of soil, the Radiological Health Branch has to approve this Removal Action Completion Report. | expansion area and a buffer that encompasses all recovered ROs at Parcel D-1 although a couple of ROs,. Although a couple of ROs recovered outside of the 1946 shoreline expansion area within the trench excavation zones and four just outside of the expansion area located within the Southwest Block are incidental and the likelihood of ROs outside that area is considered incidental and of low probability.<br><br>The railroad tie stockpiles no longer are present in Parcel D-1. They were radiologically surveyed, released from radiological controls, and disposed as non-low level radioactive waste. |

| **Reviewer:** | **US Environmental Protection Agency (EPA) Comments** from Ms. Lily Lee, Remedial Project Manager | **Date of Comments** | 17 November 2017 |
|---|---|---|---|

| Item | Review Comment | Navy Response |
|---|---|---|
| 5 | (***EPA General Comment #1***) This review does not include comments on Section 5.0, Former NRDL Site Final Status Survey, and Section 6.0, Ship Berths 14, 21, 22, and 29 Final Status Survey, which will be provided on the related Final Status Survey Reports, which are also under review separately. Changes made in response to those comments should be made to Sections 5.0 and 6.0 of the Draft Radiological Removal Action Completion Report Radiological Remediation and Support, Parcel D-1 Phase II (the Draft RACR), as applicable. | The comment is noted. There are no changes to the FSS reports for the former NRDL site or Ship Berths 14, 21, 22, and 29 that require modifications to Sections 5.0 and 6.0. |
| 6 | (***EPA General Comment #2***) Section 1.4.5 (Work Variances) of the Draft RACR includes four Field Change Requests (FCRs) that require further | Please refer to the responses to EPA General Comment 2a through 2d below. |

| Item | Review Comment | Navy Response |
|---|---|---|
| | explanation to fully understand the scope of the activity and approval process for these changes, as follows: | |
| 6a | (***EPA General Comment #2a***) FCR Number 001 states that the Sampling and Analysis Plan (SAP) specified a five-day in-growth period for preliminary screening analysis but that a decision was made in the field that no in-growth was needed. Also, it is unclear whether this screening analysis was for measurements in a field laboratory or a more permanent on-site laboratory. In addition, the text does not state to which analysis or radionuclide this FCR applies. Presumably, this FCR is in reference to the radium 226 (Ra-226) analysis, but this should be confirmed. Please explain why an approved SAP requirement was changed in the field and how it was determined that providing an analysis with no in-growth time would provide usable screening data and specify the radionuclide(s) to which this FCR applies. Please revise the text to include these details and to include information about which oversight and/or Quality Assurance (QA) management approvals were obtained for this change. Finally, please also include information about where the change request and approvals are documented. | The wording in Exhibit 1-3 for FCR No. 001 was modified to clarify that the FCR was prepared in the nature of a correction. The SAP specified a 5-day in-growth period for screening samples by gamma spectroscopy but, as noted in the FCR, the gamma screening method requires no in-growth period and the definitive data method requires a 21-day (minimum) in-growth period, which is part of the laboratory analytical protocol. The in-growth period is necessary to accommodate Ra-226 secular equilibrium and is applied to samples analyzed by gamma spectroscopy where the Ra-226 concentration is to be inferred based on the concentration of its progeny Bi-214. The FCR was prepared by the project chemist, reviewed by the technical director, and approved by the project manager. |
| 6b | (***EPA General Comment #2b***) FCR Number 003 states that the SAP specified sampling every three meters and conditional Strontium-90 (Sr-90) analysis if pipe segment samples exceeded the Cesium-137 (Cs-137) release criterion. Exhibit 1-3 states that per an agreement with the Navy's Radiological Affairs Support Office (RASO), only ten percent of pipe sediment samples exceeding the Cs-137 release criteria would undergo Sr-90 analysis and confirmation samples for pipe segments | The wording in Exhibit 1-3 for FCR No. 003 was modified to better explain the solution. The number of samples collected of pipe sediment by rule was found to be excessive and impacting the project schedule. The reduction in number was determined by the Navy to continue to meet the purpose for which the sampling was being performed, i.e., characterizing the sediment |

| Item | Review Comment | Navy Response |
|---|---|---|
| | would be collected every twenty meters. However, the text does not state why it was considered acceptable to only analyze ten percent of samples exceeding the Cs-137 release criteria for Sr-90 or why the sampling frequency was decreased from the original requirements in the SAP. Please revise the Draft RACR to address these concerns and to also include information about the specific oversight management and/or QA management approvals that were obtained for these changes and how/where the approvals are documented. | itself for waste disposal as well as informing excavation activities regarding possible contamination due to leakage. The number of confirmation samples collected from the trenches post-excavation and the types of analyses performed based on the rules were not changed. The rule for analyzing for total Sr based on a Cs-137 exceedance was limited in its application to confirmation samples and was not applied to samples collected for characterizing pipe sediment for waste disposal as well as for informing excavation activities regarding possible contamination due to leakage. The FCR was prepared by the project chemist, reviewed by the technical director, and approved by the project manager. |
| 6c | (***EPA General Comment #2c***) FCR Number 007 states that the analytical method specified for manganese in the SAP was changed to the same method as that specified for lead. While this may be acceptable, the RACR should specify the actual analytical methods and whether the analytical method change for manganese still met the required detection limit requirement. Please revise the Draft RACR to include this information and to state who was responsible for the approval of this change and how/where the approvals are documented. | An incorrect version of FCR No. 007 was inadvertently attached to the Draft RACR and has been replaced with the correct approved version. In addition, the wording in Exhibit 1-3 for FCR No. 007 was modified to clarify change was in accordance with the SAP. |
| 6d | (***EPA General Comment #2d***) FCR Number 008 states that the RS-700 system work instruction specified a three hundred second count time for quality control checks but a field change was made to only require a one hundred eighty second count time. Please revise the text to | The wording in Exhibit 1-3 for FCR No. 008 was modified to better explain the FCR was prepared in the nature of a correction of a typographical error. The documents that the work instruction was patterned after call for a |

| Item | Review Comment | Navy Response |
|---|---|---|
| | explain how it was determined that the one hundred eighty second count time was sufficient for the purpose of counting quality control check standards and which management or QA staff approved this change and how/where the approvals are documented. | 180-sec QC check. |
| 7 | (***EPA General Comment #3***) Section 3.3 (Sampling and Analysis) states the laboratories are accredited under the Department of Defense (DoD) and State of California accreditation programs; however the text does not specify if all three of the listed laboratories have both accreditations, and if the accreditations are applicable to radiological analyses. Please revise this text to include this information. | A sentence was added to Section 3.3, 2nd paragraph: "*The certifications for the matrices and methods held by each laboratory are listed in the SAP (Worksheet #23)*." |
| 8 | (***EPA General Comment #4***) The third paragraph of Section 3.3.1 (Radiological Analyses) states that if sample results were greater than or equal to the Cs-137 or Sr-90 release criteria, they were analyzed by alpha spectroscopy for Plutonium-239 (Pu-239). While it is understood that Cs-137 and Sr-90 are fission products associated with the fission of Pu-239, the Historical Radiological Assessment (HRA) indicates that Pu-239 was also obtained in pure form as sources that were used in the Naval Radiological Defense Laboratory (NRDL), yet the text does not indicate whether any samples were analyzed by alpha spectroscopy for Pu-239 without finding exceedances of Cs-137 or Sr-90. Please revise the Draft RACR to address this concern. | The HRA (Section 6.1.2) reports that, "*Radioactive sources, including radiography devices, were found to leak radioactivity occasionally*." The leaking source was returned to the manufacturer or disposed by regulated means. The HRA continues, "*There is historic evidence of sources being repaired, resurveyed, and placed back into service….It is reasonable to assume that any needed clean-up was performed if the leaking source caused radioactive contamination to spread beyond the source container because this was a common practice and necessary to eliminate future problems*." A sentence was added to Section 3.3.1, last paragraph, stating, "*No samples were analyzed for Pu-239 where there was not an exceedance for either Cs-137 or Sr-90*." |

| Item | Review Comment | Navy Response |
|---|---|---|
| 9 | (***EPA General Comment #5***) The summary of results should include the associated counting or total propagated uncertainty. Exhibit 4-4, Summary of Radiological Screening Yards (RSY) Sample Results; Exhibit 4-6 Summary of Trench Sample Results; Exhibit 5-2, Summary of NRDL Sampling Results; and Exhibit 6-1, Summary of Ship Berth Sample Results list the maximum concentration of radionuclides of concern (ROCs) detected, as well as any noted release criteria exceedances. However, the results are not reported with the associated counting or total propagated uncertainty, and the text does not state whether any of the maximum results or those that showed an exceedance had any associated qualifiers from the data validation. For completeness and clarity, please revise the tables to include the uncertainty and the text to discuss whether any of the maximum results or those that showed an exceedance had any associated qualifiers from the data validation. | The uncertainties and data qualifiers associated with the sample results are included in the laboratory analytical results contained in the referenced reports supporting the RACR. For brevity they are not included in the summary table exhibits in the RACR body. Section 3.3.3 summarizes data quality issues that were identified with the data themselves. |
| 10 | (***EPA General Comment #6***) Section 4.7 (Trench Survey and Sampling) states on page 29 that dose and risk modeling of the trench surfaces was performed in RESRAD using analytical results, but does not state which sample results were used in the modeling. For example, it is unclear if all data points were entered into RESRAD, if only the maximum results were used, if results that showed exceedances of a release criterion were used, or if only post-remediation sample results were included in the RESRAD model. Please revise the RACR to clarify the results that were input into RESRAD. | Section 2.5, Dose and Risk Modeling, specifically the last bullet of the first paragraph, was clarified to state, "*The average radionuclide concentration was used, with the net average concentration above background used for radionuclides present in background (e.g., Ra-226)*." |
| 11 | (***EPA General Comment #7***) Section 4.9 (Backfill, Compaction, and Testing of Excavated Trenches, Page 31) of the Draft RACR states that imported backfill material from the "Jericho" soil stockpile underwent | The Jericho soil stockpile, also known as Decker Island aggregate material, consisted of clean (i.e., radiologically non-impacted) offsite fill material brought |

|---|---|---|
| | appropriate screening and Navy approval in Section; however, Attachment 1 (Jericho Soil Stockpile Radiological Screening Data) does not present results for Sr-90 or Pu-239, which are radionuclides of concern at Parcel D-1. It is uncertain if soil was tested for these radionuclides prior to using the Jericho soil stockpile as backfill material. Parcel D-1 should not be approved for unrestricted use until the fill material is tested for all radionuclides of concern. Please explain why the Jericho soil backfill material was not tested for all radionuclides of concern, notably Sr-90 and Pu-239. Alternatively, please sample the Jericho soil backfill to analyze for Sr-90 and Pu-39 and present results prior to finalization of the RACR to ensure removal action goals were met. | onsite. The purpose of the sampling was to verify that the material did not contain NORM in concentrations above the release criteria. Attachment 1 was replaced with the complete borrow source assessment, which includes geotechnical, chemical, and radiological test data results. |
| 12 | (***EPA General Comment #8***) The draft describes unexpected radiological objects found in sediment used as fill. Though beyond the scope of these comments, this finding raises the question of potential similar situations elsewhere on the Shipyard where sediment could also have been used as fill and where Tetra Tech EC's practices may have always followed Workplan requirements. We can revisit this question separately later. | The comment is noted. |
| 13 | (***EPA Specific Comment #1)*** - **Section 4.4, Trench Excavation, Page 24**: The third paragraph states that abandoned steam piping wrapped in asbestos-containing material was found and an asbestos contractor was brought in to monitor the air; however, the results of this air monitoring are not presented in this section or referenced. If the results are available, please reference the appropriate section or appendix in the Draft RACR. | Section 4.4, last paragraph, was modified to clarify that air monitoring for asbestos was not initiated, but continued. The air sample results for asbestos are found in Appendix E. |

| Item | Review Comment | Navy Response |
|---|---|---|
| 14 | (***EPA Specific Comment #2***) - **Section 4.5, Radiological Screening Yard Operations, Page 27**: Section 4.5 states that samples of soil excavated from installation restoration (IR) sites were analyzed for re-use as backfill or waste characterization but does not discuss what constituents were detected above chemical clean-up goals or how much soil was disposed. As Appendix K, IR Site Chemistry Sampling Results only contains laboratory data, a summary of chemical exceedances that resulted in the off-site disposal of soil should be provided. Please revise the Draft RACR to include a discussion of constituents found above clean-up goals in excavated soil and an associated summary table. | Exhibit 4-2 was modified to include the volume of screened soil disposed as hazardous waste (63 $m^3$). Section 4.5, next to last paragraph, was modified to discuss the specifics of the sample exceedance: "*Only one sample exceeded the IR Program site chemical clean-up goal. The sample exceedance was for benzo(a)pyrene in IR 70, which is associated with Zone P. The exceedance resulted in the excavated soil, approximately 63 $m^3$, being disposed as hazardous waste*." |
| 15 | (***EPA Specific Comment #3***) – **Section 4.6, Removal of Piping and System Components, Pgs 27 through 28:** Section 4.6 indicates that non-soil material was characterized, handled, and properly disposed of; however, the volume of non-soil disposed of and the landfill to which it was sent to is not discussed. Additionally, while Section 9.0, Waste Management (Pages 54 through 55), briefly discusses waste management practices, the volume of non-soil disposed off-site is unclear. Please revise the Draft RACR to include additional detail regarding the volume and disposal of non-soil material removed. | A sentence was added to Section 4.6, 1st paragraph, stating: "*Approximately 1,642 linear m of piping were removed*." As noted in Section 4.8, 2nd paragraph, piping and non-soil material that exceeded the clean-up goals were turned over to the Navy's LLRW waste contractor. A sentence was also added to Section 9.0 explaining, "*Since the waste was aggregated with that generated by other HPNS projects, no specific volumes for this project are available*." Lastly, a sentence was added to Section 9.1 stating, "*The LLRW was shipped for disposal to the US Ecology Idaho facility in Grand View, Idaho*.". |
| 16 | (***EPA Minor Comment #1***) – **Appendix H, Daily Activity Reports, PDF Page 2370 and PDF Page 2467:** Several pages within Appendix H are out of order, including the Daily Activity Report dated 9/18/17 on PDF Page 2370 and Field Activity Report for 11-26-13 on PDF Page 2467. | The order of pages in Appendix H will be corrected in the final report. |

| Item | Review Comment | Navy Response |
|---|---|---|
| 17 | (***SFDPH General Comment #1***) The subject report describes buried radiological objects (or rusted particles that appear to have come from objects) identified and removed at Parcel D-1 during implementation of Phase II Radiological Removal Actions. The objects were in discrete locations in the top two feet of particular, mostly shoreline, areas of Parcel D-1. Based on the wording in this document, it seems that these objects were not part of the original conceptual site model and that the new theory to account for the objects found and the possibility that other objects may be buried deeper than two feet includes the approximate 1946 shoreline and other details on Exhibit 8-8. The conclusion of this report then attempts to wrap this new conceptual site model into the existing land use and activity restrictions framework that was developed during the CERCLA process for all the other parcels at HPNS. It is also not clear what specific area would be subject to this new conceptual site model. It does not appear that the Navy is proposing that all of the D-1 Phase II Areas or other non-Phase II areas should be subject to this greater than two feet concern. We are not in favor of restrictions being added to areas of Parcel D-1 where there is no evidence to support the need for such restrictions. | Section 2.2 addresses the conceptual site model for Hunters Point. Section 2.2.1 includes, as a known and potential source of contamination, the "*burial along with excavated fill materials while increasing the footprint of HPNS*." This identified source would include dredge material containing radioactive debris that was used to build up the shoreline post-WWII to its present state. Section 8.3 was modified to better explain and provide definition to the Navy's understanding regarding the area impacted by dredge material used to expand the land to its current state: "*Based on the Navy's understanding of how shoreline expansion occurred, that potential [for ROs to be present in material below 2-ft bgs in Parcel D-1 Phase II areas] is largely limited to areas east of the 1946 shoreline. The likelihood of ROs outside that area is considered incidental and of low probability*." |

|---|---|---|
| | Parcel D-1, unlike Parcel E-2, Parcel E shoreline and what is now referred to as Lot 2 on IR 7/18, does not include specific restriction language in prior documents for Areas Requiring Institutional Controls for Radionuclides. It is not clear if the Navy wishes to add that type of wording to the documents for Parcel D-1. Or is the Navy proposing a new restriction or new RMP language for this undefined area? Based on our understanding during years of discussion about the framework for the general land use and activity restrictions language that applies to all areas requiring Durable Covers at HPNS, we are not clear that this new conceptual site model can be easily accommodated under the existing restricted activities framework. We would like to discuss this issue and the Navy's proposal, including the aerial extent, to address this new conceptual site model and agree on language to describe this issue in this document. The current language and exhibits do not appear to provide enough detail. | The Navy agrees that areas without potential for ROs should not be restricted. The document has been changed to be consistent with restrictions at Parcels E, E-2, and 7/18. |
| 18 | (***SFDPH Specific Comment #2***) - **Executive Summary, Page viii, last paragraph; and Section 8.3, Assessment of Results, page 53, last paragraph; and Section 13.1, Action Memorandum Release Criteria, Page 62**: Please see General Comment #1 and please plan on discussing with us how the current framework of activity restrictions will address these concerns. | Information on land use controls will be addressed separate from the RACR. |
| 19 | (***SFDPH Specific Comment #3***) - **Section 1.3, Current and Future Reuse, Page 5:** Parcel D-1 includes a portion of the Shipyard South Multi-Use district (includes residential) in addition to HPS Shoreline Open Space area. Please revise the planned use description for Parcel D-1 to: "The future planned use for Parcel D-1 is mixed use residential and shoreline | Section 1.3 revised as recommended. |

|---|---|---|
| | open space as described by the Hunters Point Shipyard Redevelopment Plan (San Francisco Redevelopment Agency, 2010)." | |
| 20 | (***SFDPH Specific Comment #4***) - **Section 3.0, Field Activities Overview**: Section 3.0 states "Gilbane coordinated license responsibilities and management of radioactive material, including waste, with the Navy and other HPNS contractors…" Please identify the contractors referred to by this statement. | Parties to the MOU as of October 2016 were added to Section 3.0. The parties included TetraTech EC, Inc.; B & B Environmental Safety, Inc.; Chicago Bridge & Iron (CB&I); and Gilbane. |
| 21 | (***SFDPH Specific Comment #5***) - **Section 3.3.1, Radiological Analyses, page 17, paragraph 2:** This section states that "samples for which gamma spectroscopy results indicated the presence of Cs-137 above its release criterion were also analyzed for total strontium." Should Field Variance No 003 be identified as an exception? The variance states 10% for pipe sediment samples exceeding the Cs-137 release criterion were selected for conditional Sr-90 analysis. | Section 3.3.1, 2nd paragraph, was modified to clarify the samples analyzed for total Sr: "*In addition, with the exception of waste characterization samples (e.g., samples collected of sediment in SSSD piping), samples for which gamma spectroscopy results indicated the presence of Cs-137 above its clean-up goal were also analyzed for total strontium*." The rule for analyzing for total Sr based on a Cs-137 exceedance was limited in its application to confirmation samples and was not applied to samples collected for characterizing pipe sediment for waste disposal as well as for informing excavation activities regarding possible contamination due to leakage. |
| 22 | (***SFDPH Specific Comment #6***) - **Section 3.3.2, Chemical Analyses, page 17, and Sections 9.2 and 9.3, Hazardous Waste and Non-Hazardous Waste, Page 55**: Please summarize the results of the chemical analyses. Please identify comparison criteria and any compounds detected in soil above those levels. Were any chemicals present above | The chemical sampling results of excavated soil are discussed in Section 4.5, including the number of samples exceeding chemical clean-up goals (one sample), the chemical (benzo(a)pyrene), and the resulting volume of excavated soil disposed as |

| Item | Review Comment | Navy Response |
|---|---|---|
| | the remediation goals established for Parcel D-1? Section 9.2 implies some excavated soil may have been classified as hazardous waste, but does not identify quantity, origin or final disposition. Please clarify and provide these additional details if applicable. | hazardous waste (63 $m^3$). See response to Item 14. A reference to Section 4.5 was added to Section 3.3.2.<br><br>A second paragraph has been added to Section 3.3.2: " Chemical samples were screened against the remediation goals (RG) for IR Sites presented in the ROD: 11.1 mg/kg for arsenic, 0.33 mg/kg for benzo(a)pyrene, 1.76 mg/kg for benzo(b)fluoranthene, and 6,889 mg/kg for manganese. There were no exceedances, with the exception of sample 04-PD-IR70-003 which exceeded the RG for benzo(a)pyrene at 340 J mg/kg. The associated soil, originating in IR-70, was disposed of as hazardous waste as described further in Section 9.2." |
| 23 | (***SFDPH Specific Comment #7***) - **Section 3.2, Gamma Walkover Survey, page 15**: Please define the criteria used to identify "potential for elevated residual radioactivity" during gamma walkover surveys. | The sentence was modified to state, "*A gamma walkover survey (GWS) was performed prior to sampling to identify locations with the highest potential for elevated residual radioactivity based on their measured levels of gamma radiation*." |
| 24 | (***SFDPH Specific Comment #8***) - **Section 3.3.3, Data Assessment, page 17**: Please identify entity or entities performing data quality assessment and verification. Please summarize the results of data quality verification activities. For example, please provide a summary of the results of the gamma walkover survey verification activities. Does evaluation of the position-correlated measurement data confirm adequate coverage and adherence to set speeds? In regards to | Information was added to Section 3.3.3 that describe the entities who performed the data assessment activities: "*A combination of project team members from Gilbane and two of its subcontractors, Envirachem and timmy's Team, including the Project Manager, Data Manager, Project Chemist, and Certified Health Physicist, performed the data assessment of the GWS* |

|---|---|---|
| | laboratory data, please provide a summary of key findings of the quality control summary reports. | *data. The data assessment activities are summarized in Section 3.2 and presented in the respective project reports (Gilbane, 2016a through e, and 2017a and 2017b). An independent third-party validation company, Environmental Synectics, Inc. (Synectics) of Sacramento, California, performed a manual EPA Level III review on approximately 80 percent of the sampling events, and an EPA Level IV data validation on the remaining 20 percent of the results...*"<br><br>An extensive summary of key findings of the quality control summary reports was added to Section 3.3.3. In addition, a discussion of GWS data verification activities was added to Section 3.2: "*Collected data were retrieved from the RS-700 and processed using numerical and graphical methods. First, the data were plotted to ensure adequate scan coverage. A tractor speed histogram was developed using the position-correlated data as a quality control check to verify the proper speed of the detector over the ground. The data were checked for errors as well as examined for potential outliers and other anomalous features. Descriptive statistics (e.g., range, median, mean, and standard deviation) were used to assess the data set. The data were graphed on a cumulative frequency diagram to test departure from normality and to reveal characteristics of the data distribution such as dissimilar populations and data set outliers that may not be apparent otherwise*." |

| Item | Review Comment | Navy Response |
|---|---|---|
| 25 | (***SFDPH Specific Comment #9***) - **Section 4.5, Radiological Screening Yard Operations, page 25, third paragraph:** Please define point source. | To improve clarity, the term '*point sources'* was replaced with '*discrete radioactive objects*.' |
| 26 | (***SFDPH Specific Comment #10***) - **Section 4.6, Removal of Piping and System Components, pages 27 and 28:** The last sentence of page 27 indicates that non-soil material encountered during excavation "such as radioactively contaminated sand blast grit; fire brick; and drums, bottles, jars, and small containers with unknown content" were not sent to the radiological screening yard. Please confirm whether these items were in fact identified. If so, please identify the objects' origins, characterization, and final disposition (e.g., off-site disposal as LLRW). | A sentence was added to Section 4.6 stating, "*Material that was identified as radioactive waste was handled as described in Section 9.1*." Since only a general inventory of items other than discrete radioactive objects was maintained, the specific items that were identified and disposed of as LLRW cannot be confirmed. The listed examples of specific non-soil material (i.e., radioactively contaminated sandblast grit; firebrick; and drums, bottles, jars, and small containers with unknown contents) was deleted. |
| 27 | (***SFDPH Specific Comment #11***) - **Section 4.10, Site Restoration, page 31, last sentence**: Please include a reference to Section 8.0. Also, please describe the final disposition of the RSY soil that was "scooped up". | A reference to Section 8.0 was added. In addition, the following description was added to Section 4.10, 2nd paragraph: "*The RSY pads were surveyed and sampled, then scooped up. Once determined to be non-LLRW, the pad material was removed and transferred to the Navy's basewide hazardous waste contractor for waste characterization and appropriate disposal*." |
| 28 | (***SFDPH Specific Comment #12***) - **Section 5.5, Results and Analysis, Page 35, last paragraph and Section 6.4, Results and Analysis, Page 39, last paragraph**: See General Comment #1. Referenced Section 8.3 needs to better describe the aerial [areal] extent and the exact details of the Navy's proposal. | Section 8.3 was modified to better explain and provide definition to the Navy's understanding regarding the area impacted by dredge material used to expand the land to its current state: "*Based on the Navy's understanding of how shoreline expansion occurred, that potential [for ROs to be present in material below 2-* |

| Item | Review Comment | Navy Response |
|---|---|---|
| | | *ft bgs in Parcel D-1 Phase II areas] is largely limited to areas east of the 1946 shoreline. The likelihood of ROs outside that area is considered incidental and of low probability*." Exhibit 8-8 was revised accordingly. Information on land use controls will be presented separate from the RACR. |
| 29 | (***SFDPH Specific Comment #13***) - **Section 7.0, Railroad Tie Survey and Disposal, page 40**: Please provide a "Description and Background" section similar to that provided for the other Phase II investigation areas. It is unclear why railroad ties were investigated as potentially radiologically impacted. | A new Section 7.1 was added: "*Salvaged creosote railroad ties collected over time from various areas across HPNS were stockpiled in two locations in Parcel D-1: (1) the southern portion of Parcel D-1 near Ship Berths 22 and 29, and (2) at the head of Gun Mole Pier adjacent to Berth 14, as shown in Exhibit 1-2. The estimated 12,000 used railroad ties existed in various deteriorated states. Since they were considered radiologically impacted, the railroad ties required some form of radiological survey and sampling in order to achieve the Navy's goal of releasing them from radiological controls and disposing them as non-LLRW*." |
| 30 | (***SFDPH Specific Comment #14***) - **Exhibit 8-8, Locations where Discrete Radioactive Objects were Recovered, page 52 and Section 8.3, Assessment of Results, page 53**: The last paragraph states "…there is the potential for ROs to be present in material below 2 ft bgs in Parcel D-1 Phase II areas where shoreline expansion occurred in Parcel D-1 since 1946 (i.e., where dredge material from the Bay was used to create the present shoreline)." Please clearly identify this area on Exhibit 8-8 and label as "Area with Potential for Buried ROs." Was | Dredge spoils were used to expand the land present in 1946 to its current state in Parcel D-1. The ROs found inside of the 1946 shoreline are consistent with the conceptual site model of dredge spoils. Section 8.3 was modified to better explain and provide definition to the Navy's understanding regarding the area impacted by dredge material used to expand the land to its current state as follows: "*Based on the Navy's understanding of* |

|---|---|---|---|

| Item | Review Comment | Navy Response |
|---|---|---|
| 32 | (***SFDPH Comment #1 - Response to General Comment 1 and Modifications Requested based on review of the Draft Final Document***): For SFDPH General Comment #1 and Specific Comments #2, #14 and #15, your response has referenced information on land use controls that will be presented separate from the RACR. We appreciate that the Navy has held additional discussions with us about the 1946 shoreline in this area. We understand that the Navy attributes the presence of radiological objects (ROs) in fill material below two feet to the post-WWII placement of dredge material containing radioactive | Section 13.3, last paragraph, was modified to state, "*Land use and activity restrictions that are currently in place prohibit land-disturbing activities throughout Parcel D-1 in the interim until the LUC RD (ChaduxTt, 2011) is amended to appropriately mitigate any risk to human health relating to the potential presence of ROs in material below 2 ft bgs*." |

| Item | Review Comment | Navy Response |
|---|---|---|
| | debris. This information is important and explains the discovery of discrete ROs around the 1946 shoreline. As you have explained, the potential presence of ROs near the 1946 shoreline on Parcel D-1 will result in a subsequent document with an opportunity for review and comment (e.g. possibly a Memo to File) that will define required activity restrictions based on the possibility of buried radioactive objects below two feet. Since activity restrictions are part of Institutional Controls which are part of the remedy, it seems that the FFA Signatories cannot approve that this Remedial Action and RACR are complete, unlike all prior parcels where the Institutional Control framework was complete and agreed to by all parties prior to final RACR approval.<br><br>We request that the area requiring institutional controls/land use controls be clearly shown on a figure in this document and then further defined in the referenced future document and that the future document acknowledge uncertainties related to placement of dredge material containing radiological debris. Should the area be slightly larger than the 1946 shoreline and extend to cover to the southwest where ROs have been found or possibly extend to the Parcel D-1/Parcel E boundary? As we stated in previous comments, we are not in favor of a restriction over a wide area solely based on the lack of information. But in this case, there is uncertainty in the exact areal extent of the concern even with the information available. Specifically, the following uncertainties may be helpful in evaluating an appropriate boundary for the ARIC: (1) The Navy has not provided enough supporting information to define the fill placement depth pre- vs. post-use of ROs. Fill is present up to 34 feet thick at IR-53 around Buildings | Exhibit 8-8 was modified to show the area requiring institutional controls (ARIC). The area is slightly larger than the 1946 shoreline approximation and includes the southwest area where ROs were found. Additional information regarding the basis for the ARIC was added as Section 8.3.2. |

|---|---|---|
| | 525 and 530 (near RO-01, -02, and -09) as provided in the Parcel D Remedial Investigation Report and the depth at which ROs may be present is uncertain. This RACR states that "HPNS began using radioactive materials in shipyard operations and NRDL research projects in the early 1940s" and that the "surface of Parcel D-1 is fill and was constructed between approximately 1942 and 1947"; did the material placed pre-1946 include material other than dredge material?; (2) The radiological objects found land-ward of the approximate 1946 shoreline are not only found on the surface (i.e., < 0.5 feet bgs). Rather, the ROs are found up to 2 to 3 feet bgs, which is comparable in depth to those objects found bay-ward of the 1946 shoreline; (3) The accuracy of the approximate 1946 shoreline may vary based on the quality of the referenced aerials; and (4) The Navy cites grading of dredge material as "a ready explanation for the discovery of ROs outside of, but adjacent to, the 1946 shoreline."<br><br>In support of drawing the restriction line close to but not exactly on your currently presented 1946 shoreline, we recommend the following revisions to the Navy's proposed text: "Based on the Navy's understanding of how shoreline expansion occurred, ~~that~~ [the] potential for ROs to be present in material below 2-ft bgs in Parcel D-1 Phase II areas is largely limited to areas ~~east of~~ [around] the 1946 shoreline. The likelihood of ROs ~~outside that area~~ [moving away from the 1946 shoreline] is considered incidental and of low probability." | The text, now found in Section 8.3.1, 4th paragraph, was modified as recommended. Similar text found in the Executive Summary and in Section 13.3 was also modified as recommended. |
| 33 | (***SFDPH Comment #2 – Request for Regulatory Agencies)*** We urge the FFA Signatories to provide conditional approval of this RACR, once their concerns have been addressed, pending the subsequent document | Noted. Section 13.3, last paragraph, was modified to state, "*Land use and activity restrictions that are currently in place prohibit land-disturbing activities* |

|---|---|---|
| | that will finalize the needed activity restrictions (i.e., the RACR is automatically deemed approved once the subsequent document is approved). In our opinion, the remedy isn't complete until all aspects, including activity restrictions, are defined and the framework for implementation is complete. | *throughout Parcel D-1 in the interim until the LUC RD (ChaduxTt, 2011) is amended to appropriately mitigate any risk to human health relating to the potential presence of ROs in material below 2 ft bgs*." |
| 34 | (***SFDPH Comment #3 – Response to Specific Comment #6, Section 3.3.2, Chemical Analyses, page 17, and Sections 9.2 and 9.3, Hazardous Waste and Non-Hazardous Waste, Page 55)*** The Navy's Response addresses specific comment #6; however, given the detection of benzo(a)pyrene at 340 J mg/kg, we are curious if the Navy confirmed the origin of the soil and whether the area is already being addressed under a chemical remedial action or a petroleum program remedial action? | The Navy has done hot spot removals in the past as remedial action in Parcel G. The exceedance identified in IR-70 was based on three samples collected with results for benzo(a)pyrene reported as 0.26, 0.28, and 0.34 mg/kg. The soil was disposed as hazardous waste and clean fill brought in has backfill, which effectively served as a remedial action in response to the elevated chemical of concern. |
| 35 | (***SFDPH Comment #4 – Section 3.2, Gamma Walkover Survey, page 15)*** The Navy's response is adequate to explain the purpose of the survey but it doesn't address our comment. Our comment is asking what measurement (i.e. what number) the Navy uses as the comparison criteria "to identify locations with the highest potential for elevated residual radioactivity"? | A sentence was added to Section 3.2, 2nd paragraph stating, "*Locations with measurements greater than three standard deviations above the data set mean were routinely selected for biased sampling*." |
| 36 | (***SFDPH Comment #5 – Section 8.3 Assessment of Results, Exhibit 8-8, Page 55)*** Please label the fuchsia dotted line as the 1946 shoreline. | Exhibit 8-8 was modified to label the fuchsia dotted line as the 1946 shoreline approximation. |
| 37 | (***SFDPH Comment #6 – Section 13.3, Discrete Radioactive Objects, page 67)*** Section 13.3 states "Implementation of land use and activity restrictions as prescribed by the ROD (Navy, 2009) and further detailed | Section 13.3, last paragraph, was modified to state, "*Land use and activity restrictions that are currently in place prohibit land-disturbing activities throughout* |

| Item | Review Comment | Navy Response |
|---|---|---|
| | by the Land Use Controls Remedial Design in the Final Design Basis Report For Parcel D-1, Hunters Point Naval Shipyard, San Francisco, California (ChaduxTt, 2011), which prohibit land-disturbing activities throughout Parcel D-1, will appropriately mitigate any risk to human health relating to the potential presence of ROs in material below 2 ft bgs." Please see comment 1 and please either delete this statement or modify this statement to reference a subsequent document that will define required activity restrictions based on the possibility of buried ROs below two feet.<br><br>As written, the Navy's statement is referencing an activity restriction that is only one tiny piece of the framework that allows for redevelopment to happen while "appropriately mitigat[ing] any risk to human health". The referenced activity restriction is part of a framework, that includes a Risk Management Plan, that requires no extra soil handling procedures other than those listed in the Risk Management Plan which are similar to normal construction soil handling protocols. There are no handling protocols in that framework to "address the potential for ROs in subsurface below 2 feet" as stated in your RTCs. If you want to reference this particular activity restriction then you must also reference the future activity restrictions that your Response to Comments says you are going to present separate from this RACR because those are going to be the activity restrictions, based on your RTC's, that will apply to this area bayward of the 1946 shoreline. | *Parcel D-1 in the interim until the LUC RD (ChaduxTt, 2011) is amended to appropriately mitigate any risk to human health relating to the potential presence of ROs in material below 2 ft bgs*."<br><br>See response to first part of comment above. |
| 38 | (***SFDPH Minor Comment #1 – Section 1.2, Scope of Work, Page 5)*** Please delete the end of this sentence as follows: "This radiological | Section 1.2, last paragraph, was modified as recommended. |

|---|---|---|---|

| | | |
|---|---|---|
| 39 | Please note that CDPH EMB previously indicated that a recommendation for unrestricted release (RURR) will not be provided to those areas along the shoreline where soils below a depth of 2 feet were not investigated for ROCs (NRDL Area and Ship Berths 14, 21, 22, 29). Currently, the Executive Summary and Sections 8.3 and 13.3 of the Draft RACR indicate that land use and activity restrictions as indicated in the 2009 ROD or that are already in place will mitigate any risk to human health and prohibit land disturbing activities. The ROD land use restrictions are to address COCs left in place throughout the base, not ROCs. DTSC recommends revising these sections to indicate that additional restrictions to address ROCs in soil below 2 feet will be added to the land use restrictions already prescribed in the ROD (similar to those for IR07/18). | The wording in the cited sections was modified to read as follows: "*Land use and activity restrictions that are currently in place prohibit land-disturbing activities throughout Parcel D-1 in the interim until the Land Use Controls Remedial Design in the Final Design Basis Report For Parcel D-1, Hunters Point Naval Shipyard, San Francisco, California (ChaduxTt, 2011) is amended to appropriately mitigate any risk to human health relating to the potential presence of ROs in material below 2 ft bgs*." |

| | | |
|---|---|---|
| 40 | ***(Evaluation of the Response to Item 10, EPA General Comment #6)*** The response partially addresses the comment. Specifically, the proposed revised text does not clarify which sample results were averaged. For example, it is unclear if only post-remediation confirmation samples were averaged for inclusion in the RESRAD dose and risk modeling or if bias sample results were included as well. | Section 4.7, 5th paragraph, 1st sentence was modified to state, "*Dose and risk modeling of the trench surfaces was performed in RESRAD using the analytical results of samples collected from both systematically-spaced and biased locations representing post-remediation or 'as-left' trench surfaces*." |

| Response to Document Review Comments | | | |

| **Reviewer:** | **California Department of Public Health (CDPH) Comments** via email from Ms. Juanita Bacey of DTSC (This review was performed in support of the Interagency Agreement between DTSC and CDPH.) | **Date of Comments** | Email correspondence dated 26 April 2018 |
|---|---|---|---|
| 41 | **(CDPH Specific Comment #1) – in reference to Navy response to Item #4:** Navy Response, Review Comment, Item number four, sentence number three; "Unrestricted release request and no further action recommendation for removed SSSD lines are warranted, because none of the SSSD trenches were located within the 1946 shoreline expansion area as potential for RO is limited only within the 1946 shoreline." An overlay of Exhibit 1-2, "Parcel D-1 Site Features Involving Phase II Removal Actions", on top of Exhibit 8-8, "Locations where Discrete Radioactive Objects were Removed", apparently shows multiple Sanitary Sewer and Storm Drains (SSSD) located whole and in part in the area labeled as, "Historical 1946 Shoreline". Please explain. | Exhibit 8-8 was modified to show the location of SSSD trenches within the 1946 shoreline area and the response to Item #4 was modified to read, "*Unrestricted release request and no further action recommendation for removed SSSD lines are warranted except for those SSSD trenches located within the 1946 shoreline expansion area*." | |
| 42 | **(CDPH Specific Comment #2) – Exhibit 8-8:** It is not clear to the reader if the blue hatched area marked as, "Restriction related to radioisotopes", on Exhibit 8-8, "Locations where Discrete Radioactive Objects were Removed"; is the same area(s) as the, "buffer zone", referred to in page 57, paragraph one, sentence five. Please clarify. | The legend in Exhibit 8-8 was modified to call the cross-hatching the '*Area Requiring Institutional Controls*.' A sentence was included in the new Section 8.3.2 that states, "*Therefore, a buffer zone extending beyond the 1946 shoreline approximation is included with the 2 ft bgs restriction for Parcel D-1 Phase II, which is referred to as the area requiring institutional controls (see Exhibit 8-8).*" | |
| 43 | **(CDPH Specific Comment #3) – in reference to Navy response to Item #4:** Navy Response, Review Comment, Item number four, sentence | | |

| | | |
|---|---|---|
| | number four: "A couple of ROs recovered outside of the 1946 shoreline expansion area within the trench excavation zones are incidental and the likelihood of ROs outside that area is considered incidental and of low probability." | |
| | a. Please note that the sentence number three states, "...as potential for RO is limited only within the 1946 shoreline." Please resolve apparent contradiction. | Sentences were modified to read, "…*the potential is largely limited to areas around the 1946 shoreline (Exhibit 8-8). The likelihood of ROs moving away from the 1946 shoreline is considered incidental and of low probability*." |
| | b. Of particular concern are RO-03 and RO-04; which according to Exhibit 8-7, "Recovered Radioactive Objects Data", page 54, are deck markers recovered from Trenches #04-PD-015, Zone O, and #04-PD-016, Zone P, respectively. These ROs are solid deck markers; and therefore cannot be considered effusions from the SSSD line which was removed. Please present a Conceptual Site Model (CSM) which explains the presence of solid deck markers ROs outside the Historical 1946 Shoreline. | A new Section 8.3.2, entitled, '*Conceptual Site Model*,' was added to explain the presence of ROs outside the historical 1946 shoreline approximation. |
| | c. A review of, "Exhibit 8-8, "Locations where Discrete Radioactive Objects were Removed", shows that seven Radiological Objects (ROs) were located inside of the "Historical 1946 Shoreline", while six ROs were located outside of the "Historical 1946 Shoreline". This may be more accurately stated as a rough equivalency of 54 percent to 46 percent. Please present a Conceptual Site Model (CSM) which explains the presence of ROs outside the Historical 1946 Shoreline. | A new Section 8.3.2, entitled, '*Conceptual Site Model*,' was added to explain the presence of ROs both inside and outside the historical 1946 shoreline approximation. |

John,
I have reviewed the data for the two backfill sources and concur with use of these sites for fill at IR Site 7 and 18.

Matt

Importance: High

Hi Matt,

We haven't received a response from you regarding concurrence to use these two backfill sources (see email below dated November 10, including original attachment). Our plan is to start importing material one week from today, so our hope is to receive concurrence from RASO as soon as possible. Thanks.

Subject: Borrow Source Concurrence

Matt -

ERRG is requesting RASO concurrence on borrow sources BS-DIA and BS-DD. The radiological data has already been reviewed by Erik Abkemeier, TtEC's RSO, for compliance with the established radiological standards. I have attached the borrow source assessment reports that I submitted to the ROICC for your reference. The pertinent radiological data is included on pages 129-138 for BS-DIA and pages 315-321 for BS-DD. Please let me know if you have any questions or require any further information. Thanks.

**Final Design Basis Report,**
**Specifications Section 31 00 00 Earthwork, Paragraph 2.1.1**

1.4 DELIVERY, STORAGE, AND HANDLING

Perform in a manner to prevent contamination or segregation of materials.

1.5 EQUIPMENT

Equipment used to place the select fill layers shall be as described in the approved Materials Handling Plan. Equipment shall not accelerate or brake suddenly, turn sharply, or be operated at speeds exceeding 5.0 miles per hour.

PART 2 PRODUCTS

2.1 COMPACTED COVER MATERIAL AND EROSION RESISTANT LAYER MATERIAL

Imported material used in the soil cover shall conform to specifications of 2.1.1 of this section. The soil shall be free of debris, roots, wood, scrap metal, vegetation, refuse, soft unsound particles, and deleterious or objectionable materials.

2.1.1 Soil Classification

The soil cover below 12 inches depth shall be ASTM D 2487-06e1, classification SM, SC, CL, or ML, with a maximum liquid limit of 45 percent and a maximum plasticity index of 25 percent per ASTM D 4318-05. The maximum particle size shall be 3 inches in its largest dimension with at least 90 percent passing a ¾-inch sieve, and at least 60 percent passing the No. 4 sieve, and not more than 60% passing a No. 200 sieve.

The soil in the upper 12 inches of the soil cover shall be ASTM D 2487-06e1, classification SM or SC, with a maximum liquid limit of 35 percent and a maximum plasticity index of 15 percent per ASTM D 4318-05. The maximum particle size shall be 3 inches in its largest dimension with at least 90 percent passing a ¾-inch sieve, at least 60 percent passing the No. 4 sieve, and not more than 30 percent passing a No. 200 sieve.

Refer to Section 35 31 19 Coastal Protection for fill material to be used under the revetment and below the high water elevation.

2.2 COMPOSITE TURF REINFORCED MATTING (CTRM)

The composite turf reinforcement mat (CTRM) shall be a machine-produced mat of 100 percent natural fiber matrix incorporated into a permanent three-dimensional netting structure. The matrix shall be stitch bonded between a heavy duty ultraviolet (UV) stabilized bottom net, crimped intermediate netting, and a heavy-duty, UV-stabilized top net. The crimped netting shall form prominent, closely spaced ridges across the entire width of the mat. The three nettings shall be stitched together with UV-stabilized polypropylene thread to form a permanent three-dimensional structure. Matting shall be three-dimensional geomatrix of heavy nylon monofilaments fused at their intersections. Ninety percent of the geomatrix shall be open space available for soil and root interaction with filaments. Matting shall have three-dimensional strength without laminated or stitched layers. The matting shall be a minimum weight of 8 ounces per square yard with a minimum thickness of 0.4 inches. In accordance with ASTM D 5034, the matting shall have a minimum tensile strength of 85 pounds per foot in each direction. The matting shall be for permanent service.

**NOTE(S):**

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

Regarding: Project: G0G290461; ERRG, Hunters Point
EML ID: 685062

Approved by:

Lab Manager
Dr. Kamashwaran Ramanathan

Dates of Analysis:
Asbestos-CARB 435: 08-10-2010

Service SOPs: Asbestos-CARB 435 (01265)

For clarity, we report the number of significant digits as calculated; but, due to the nature of this type of biological data, the number of significant digits that is used for interpretation should generally be one or two. All samples were received in acceptable condition unless noted in the Report Comments portion in the body of the report. Due to the nature of the analyses performed, field blank corrections of results is not a standard practice. The results relate only to the items tested.

EMLab P&K ("the Company") shall have no liability to the client or the client's customer with respect to decisions or recommendations made, actions taken or courses of conduct implemented by either the client or the client's customer as a result of or based upon the Test Results. In no event shall the Company be liable to the client with respect to the Test Results except for the Company's own willful misconduct or gross negligence nor shall the Company be liable for incidental or consequential damages or lost profits or revenues to the fullest extent such liability may be disclaimed by law, even if the Company has been advised of the possibility of such damages, lost profits or lost revenues. In no event shall the Company's liability with respect to the Test Results exceed the amount paid to the Company by the client therefor.

The results relate only to the items tested. Interpretation is left to the company and/or persons who conducted the field work. The test report shall not be reproduced except in full, without written approval of the laboratory. The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the federal government.

All samples were received in acceptable condition unless otherwise noted. EMLab P&K reserves the right to dispose of all samples after a period of thirty (30) days, according to all state and federal guidelines, unless otherwise specified.

‡ A "Version" indicated by -"x" after the Lab ID# with a value greater than 1 indicates a sample with amended data. The revision number is reflected by the value of "x".

**Appendix B Sampling and Analysis Plan, Worksheet 15.8**

## SAP WORKSHEET #15.8 – REFERENCE LIMITS AND EVALUATION TABLE

**Matrix:** Soil

**Analytical Group:** Gamma Spectroscopy (on-site laboratory)

| Analyte | Chemical Abstracts Service Number | PAL (pCi/g)[a] | PAL Reference | Project Minimum Detectable Activity (pCi/g) | Laboratory-Specific | |
|---|---|---|---|---|---|---|
| | | | | | Minimum Detectable Activity (pCi/g) | Method Detection Limit (pCi/g) |
| Actinium-228 | 14331-83-0 | None established | Not applicable | Not applicable | Not applicable[b] | Not applicable |
| Americium-241 | 86954-36-1 | None established | Not applicable | Not applicable | Not applicable[b] | Not applicable |
| Bismuth-212 | 14913-49-6 | None established | Not applicable | Not applicable | Not applicable[b] | Not applicable |
| Bismuth-214 | 14733-03-0 | None established | Not applicable | Not applicable | Not applicable[b] | Not applicable |
| Cesium-137 | 10045-97-3 | 0.113 | ROD[c] | 0.07 | 0.07 | Not applicable |
| Cobalt-60 | 10198-40-0 | 0.0361 | ROD[c] | Not applicable | Not applicable[b] | Not applicable |
| Europium-152 | 14683-23-9 | None established | Not applicable | Not applicable | Not applicable[b] | Not applicable |
| Europium-154 | 15585-10-1 | None established | Not applicable | Not applicable | Not applicable[b] | Not applicable |
| Lead-210 | 14255-04-0 | None established | Not applicable | Not applicable | Not applicable[b] | Not applicable |
| Lead-212 | 15092-94-1 | None established | Not applicable | Not applicable | Not applicable[b] | Not applicable |
| Lead-214 | 15067-28-4 | None established | Not applicable | Not applicable | Not applicable[b] | Not applicable |
| Potassium-40 | 13966-00-2 | None established | Not applicable | Not applicable | Not applicable[b] | Not applicable |
| Protactinium-234m | 378783-76-7 | None established | Not applicable | Not applicable | Not applicable[b] | Not applicable |
| Radium-226 | 13982-63-3 | 1.0 above background | ROD[c] | 1.4 | 1.4 | Not applicable |
| Thallium-208 | 14913-50-9 | None established | Not applicable | Not applicable | Not applicable[b] | Not applicable |
| Thorium-232 | 7440-29-1 | 1.69 | ROD-2[d] | Not applicable | Not applicable[b] | Not applicable |

## SAP WORKSHEET #15.8 – REFERENCE LIMITS AND EVALUATION TABLE *(continued)*

**Matrix:** Soil

**Analytical Group:** Gamma Spectroscopy (on-site laboratory)

| Analyte | Chemical Abstracts Service Number | PAL (pCi/g)[a] | PAL Reference | Project Minimum Detectable Activity (pCi/g) | Laboratory-Specific | |
|---|---|---|---|---|---|---|
| | | | | | Minimum Detectable Activity (pCi/g) | Method Detection Limit (pCi/g) |
| Thorium-234 | 15065-10-8 | None established | Not applicable | Not applicable | Not applicable[b] | Not applicable |
| Uranium-235 + daughters | 15117-96-1 | 0.195 | ROD-2[d] | Not applicable | Not applicable[b] | Not applicable |

Notes:

a. If an analyte does not have a PAL and is detected, the Navy and the regulatory agencies will discuss the analyte to determine an acceptable value for comparison.

b. Minimum detectable activity is determined based on background count, sample size, and counting time. A longer counting time will achieve a lower minimum detectable activity. For analytes with no PAL, the minimum detectable activity is not applicable.

c. Remedial goal from the Parcel B ROD (DON, 2009a), Parcel G ROD (DON, 2009b), and Parcels D-1 and UC-1 ROD (DON, 2009c)

d. Remedial goal from the Parcel G ROD (DON, 2009b), and Parcels D-1 and UC-1 ROD (DON, 2009c)

PAL = project action limit

pCi/g = picocuries per gram

RRO = radiological remedial objective (TtECI, 2009)

# - All peaks for activity calculation had bad shape.
* - Activity omitted from total
& - Activity omitted from total and all peaks had bad shape.
< - MDA value printed.
A - Activity printed, but activity < MDA.
B - Activity < MDA and failed test.
C - Area < Critical level.
F - Failed fraction or key line test.
H - Halflife limit exceeded

---------- S U M M A R Y ----------

Total Activity (  50.9 to  3247.4 keV)  1.570E+01  pCi/g

**Subject:** ERRG Sampling Results

Attached for your review are the ERRG sampling results which did not indicate any radionuclides of concern above the
release criteria.
