Re: Implemented Corrective Measures – Groundwater Recovery and Treatment System
Semi-Annual Post Closure Monitoring Report
Former Amphenol Facility #IND 044 587 848
980 B Hurricane Road
Franklin, Indiana

Dear Mr. Thomas:

This Implemented Corrective Measures – Groundwater Recovery and Treatment System (ICM-GRTS) Report is submitted on behalf of the "Performing Respondent", Amphenol Corporation. This report summarizes the "Work Efforts" completed during the second semi-annual period (April 29, 2016 through October 27, 2016) of the calendar year 2016. The "Work Efforts" were conducted pursuant to Section VIII of the Administrative Order on Consent for Corrective Measures Implementation (CMI) for the above referenced site and in accordance with the approved Post Closure Monitoring Work Plan submitted to the USEPA in March 2000.

The "Work Efforts" performed at the site included:

- Operations and Maintenance of the Groundwater Recovery and Treatment System
- Groundwater Elevation Monitoring
- Quarterly Sampling and Analysis of the Groundwater Recovery and Treatment System
- Semi-Annual Groundwater Sampling and Analysis

Groundwater Recovery and Treatment System – Operations and Maintenance

The Implemented Corrective Measure (ICM) at the site is a groundwater pump and treat system consisting of five (5) recovery wells (RW-1 through RW-5). Recovery wells RW-1, RW-2, and RW-3 have 5 foot screened intervals at depths of approximately 15 to 20 ft BGS and 2 foot sumps. Recovery well RW-4 has a 10 foot screened interval at a depth of approximately 13 to 23 ft BGS and a 4-foot sump. An additional recovery well (RW-5) was installed in June 2010 and activated in July 2010 in conjunction with supplemental bioremediation activities completed at the site. Recovery well RW-5 has a 10 foot screened interval at a depth of approximately 14 to 24 feet BGS and a 2-foot sump. Electric submersible pumps are used to pump groundwater from the recovery wells to an air stripper where volatile organic compounds (VOCs) are volatilized and exhausted to the atmosphere. Groundwater effluent from the air stripper is discharged to the City of Franklin municipal sanitary sewer system. In addition to VOC removal, the ICM is designed to lower the potentiometric groundwater surface to below the level of the existing storm sewer invert.

To ensure proper performance of the groundwater recovery and treatment system, IWM Consulting Group, LLC (IWM) personnel conducted routine operation and maintenance (O&M) inspections. Bi-weekly O&M duties include measurement of influent flow rates, measurement of groundwater elevations of the recovery wells, routine inspections and necessary repairs of influent and effluent lines, and air stripper maintenance. On a monthly basis, depth to groundwater is recorded in monitoring wells IT-2, IT-3, MW-3, MW-9, MW-12R, MW-20, MW-21, MW-22, MW-24, MW-26, MW-27, MW-28, MW-29, MW-30, and recovery wells RW-1 through RW-5. The air stripper trays and effluent discharge line are inspected and cleaned as necessary during monthly O&M activities. Also, influent sediment filters are replaced monthly. Quarterly O&M activities include complete disassembly and cleaning of the air stripper trays and sump. The sequestering agent system is also maintained on a quarterly basis. The air stripper blower lubrication and integrity is inspected on a quarterly basis. All recovery well pumps are also removed and cleaned on a quarterly basis. Monthly O&M reports are attached in **Appendix A**.

During this reporting period (April 29, 2016 through October 27, 2016), approximately 7,207,262 gallons of groundwater were recovered, treated, and discharged. The combined average influent flow rate for the period was 27.65 gallons per minute (gpm). To date, approximately 230,460,755 gallons have been recovered since the groundwater recovery and treatment system was activated in February 1995. Groundwater recovery rates to date are provided in **Table 1**.

Overall the groundwater recovery and treatment system was very reliable and was operational during the majority of this reporting period. However, the following operational issues were encountered:

IWM personnel mobilized to the site on May 13, 2016 to complete bi-weekly and monthly system operation and maintenance activities. The PVC fitting for the influent line of recovery well RW-2 was found to be cracked and the fitting was repaired on May 13, 2016. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on May 13, 2016.

At the request of David Dowden, the current property owner, IWM personnel mobilized to the site on May 25, 2016 in order to temporarily deactivate the groundwater recovery and treatment system during an investigation by commercial sewer cleaning contractors. The sanitary sewer line exiting the existing structure was not flowing properly nor was the water property flowing away from the remedial system's outfall manhole. Consequently, the remedial system was temporarily deactivated in order to allow the investigation to be completed. During the investigation, a buildup of debris was found in the sewer line onsite, both near the remedial system outfall manhole and further downgradient of the outfall. The buildup reduced the discharge flow from the sewer system onsite and subsequently caused the sewer lines to drain at a slower rate than normal. The groundwater recovery and treatment system was reactivated following the completion of the sewer investigation and cleaning. The groundwater recovery and treatment system was completely operation upon arrival and departure from the site on May 25, 2016.

IWM personnel mobilized to the site on May 27, 2016 to complete bi-weekly system operation and maintenance activities and to obtain quarterly system samples. A number of the float sensors for recovery wells RW-1, RW-2, and RW-3 were found to be malfunctioning and were replaced on May 27, 2016. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on May 27, 2016.

IWM personnel mobilized to the site on July 22, 2016 to complete biweekly system operation and maintenance activities. The connection fitting from the wellhead to the influent line inside the well vault of recovery well RW-2 was found to be leaking and was repaired on July 22, 2016. The groundwater

recovery and treatment system was completely operational upon arrival and departure from the site on July 22, 2016.

IWM personnel mobilized to the site on August 18, 2016 to complete bi-weekly system operation and maintenance activities and to obtain quarterly system samples. The influent line for recovery well RW-2 was found to have a crack inside the remediation system building and was repaired on August 18, 2016. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on August 18, 2016.

IWM personnel mobilized to the site on September 27, 2016 to conduct alarm response activities due to a power outage causing the system to shut down. The groundwater recovery and treatment system was reactivated during the alarm response visit and was completely operational upon departure from the site on September 27, 2016.

Groundwater Level Measurements

IWM personnel gauged select monitoring wells (IT-2, IT-3, MW-3, MW-9, MW-12R, MW-20, MW-21, MW-22, MW-23, MW-24, MW-26, MW-27, MW-28, MW-29, and MW-30) at the site on a monthly basis using an electronic oil/water interface probe to determine the depth to water and the presence of detectable thickness of liquid-phase hydrocarbons. For this semi-annual reporting period, depth to water in the monitoring wells ranged from 7.69 feet below top of casing (TOC) in MW-9 to 17.86 feet below TOC in MW-22. During this reporting period, neither light non-aqueous phase liquids (LNAPL) nor dense non-aqueous phase liquids (DNAPL) were detected within the monitoring and recovery well network at the site. Additionally, the water table has fluctuated slightly from April 2016 to October 2016. The groundwater elevation data indicates that the groundwater recovery and treatment system maintains hydraulic control of the dissolved VOC plume. **Figure 1** is a site plan illustrating pertinent site features and well locations. A groundwater elevation contour map based on the most recent gauging event (October 13, 2016) is provided as **Figure 2**. Historic groundwater elevation data and groundwater contour maps for this reporting period are provided in each monthly O&M report included in **Appendix A**. Groundwater elevations during this semi-annual reporting period are provided in **Table 2**.

Quarterly Treatment System Sampling and Analysis

On May 27, 2016, influent samples from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 and a combined effluent sample were obtained to evaluate the groundwater treatment system. Each of the influent sample taps was allowed to run for at least 10 seconds. Prior to sampling, water flow from the tap was reduced to minimize turbulence and agitation. All samples were submitted to Pace Analytical Services, Inc. (Pace), located in Indianapolis, Indiana for VOC analysis by SW-846 Method 8260.

Laboratory analytical results from the May 27, 2016 quarterly system sampling activities indicated the presence of 1,1,1-trichloroethane and trichloroethene in groundwater samples obtained from recovery wells RW-1, RW-2, RW-3, and RW-5. Cis-1,2-dichloroethene was detected in the groundwater samples obtained from recovery wells RW-2, RW-3, and RW-5. Tetrachloroethene was detected in the groundwater samples obtained from recovery wells RW-2, RW-3, RW-4, and RW-5. No VOCs were detected in the system's combined effluent sample.

On August 18, 2016, influent samples from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 and a combined effluent sample were obtained to evaluate the groundwater treatment system. Each of the influent

sample taps was allowed to run for at least 10 seconds. Prior to sampling, water flow from the tap was reduced to minimize turbulence and agitation. All samples were submitted to Pace for VOC analysis by SW-846 Method 8260.

Laboratory analytical results from the August 18, 2016 quarterly system sampling activities indicated the presence of 1,1,1-trichloroethane and trichloroethene in groundwater samples obtained from recovery wells RW-1, RW-2, RW-3, and RW-5. Cis-1,2-dichloroethene was detected in the groundwater samples obtained from recovery wells RW-2, RW-3, and RW-5. Tetrachloroethene was detected in the groundwater samples obtained from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5. 1,1-Dichloroethane was detected in the groundwater sample obtained from recovery well RW-2. No VOCs were detected in the system's combined effluent sample.

The analytical reports for the quarterly system sampling events are included in **Appendix B**. A summary of quarterly system sampling results is included in **Table 3**.

Semi-Annual Groundwater Sampling and Analysis

On October 13, 2016, groundwater samples were obtained from monitoring wells IT-2, IT-3, MW-12R, MW-20, MW-22, MW-28, MW-29, and MW-30 for VOC analysis to evaluate current groundwater quality at the site. Groundwater samples were collected using dedicated, disposable, bottom-loading bailers to reduce the risk of cross-contamination. Three-well volumes were purged prior to sample collection. Samples were submitted to Pace for VOC analysis using US EPA SW 846 Method 8260. Groundwater sampling logs are provided in **Appendix C**.

The highest VOC concentrations were detected in the groundwater samples obtained from monitoring well MW-12R (954.5 µg/L total VOCs) located adjacent to recovery well RW-2 and monitoring well MW-22 (705.5 µg/L total VOCs) located 30 feet northwest of recovery well RW-3. Therefore, the groundwater recovery and treatment system is effectively targeting the area of greatest VOC concentration.

1,1-Dichloroethane was detected in monitoring well IT-2. Trichloroethene was detected in monitoring wells IT-2, MW-12R, MW-22, MW-28, and MW-30. Cis-1,2-dichloroethene was detected in monitoring wells IT-2, MW-12R, and MW-22. 1,1,1-Trichloroethane was detected in monitoring wells MW-12R, MW-22, MW-28, and MW-30. Tetrachloroethene was detected in monitoring wells MW-12R, MW-22, and MW-28.

No VOCs were detected in the groundwater samples obtained from monitoring wells IT-3, MW-20, and MW-29.

Overall, the groundwater recovery and treatment system, along with supplemental activities completed in 2010 and 2011, appear to be effectively reducing VOC concentrations at the site. When comparing the highest observed historical total VOC concentrations (generally before or immediately following the start of the groundwater recovery and treatment system in March 1995) to the results of the October 2016 groundwater sampling event, the following total VOC concentration reductions have been observed:

Should you have any questions regarding this site or information summarized within this report, please contact the undersigned at (317) 347-1111.

Sincerely,

Notes:

- Data prior to 4/12/96 was collected by EMCON.
- A new flow baseline (zero cumulative flow) was established on August 3, 1995, due to flow meter replacement.
- Erroneous flow meter reading from RW-3 on 10/1/96.
- Due to a flow meter malfunction, the totalizer for RW-2 showed a negative flow of 1,051 gallons on January 14, 1997.
- Due to a flow meter malfunction, the totalizer for RW-3 showed a negative flowage of 1,538 gallons, 19,689 gallons, and 20,197 gallons on March 14, March 28, and May 7, 1997, respectively.
- Due to a flow meter malfunction, the total gallons pumped between July 2 and July 16, 1998 was estimated at 10 gpm for RW-2 and RW-3.
- Recovery wells converted from pneumatic to electrical submersible pumps in March 1999.
- Recovery well RW-4 installed late February 1999.
- Recovery well RW-5 was initiated on July 20, 2010.
- Recovery wells RW-1, RW-2, RW-3 and RW-4 were developed on May 15, 2000.
- NEEP Systems air stripper installed on August 29 through August 31, 2000.
- New totalizer installed for Recovery well RW-5 on March 20, 2015, the total gallons pumped from recovery well RW-5 during March 2015 was estimated at 8.5 gpm.

Notes:
Results in micrograms per liter (ug/l).
(1) ND - Not Detected - analyte not detected above laboratory method detection limit.
(2) NS - Not Sampled, RW-1 not in operation during April 1996 and November 1997 sampling events.
E - Trichloroethane value for RW-1 during the November 13, 1998 sampling event is an estimated value only.

Results from 1997 through 2004 are not displayed.

Notes:
Results in micrograms per liter (ug/l).
* - Naphthalene and MTBE were detected at 18 and 17 ug/L, respectively; however, these detections are most likely due to laboratory artifacts or handling issues.
** - Methylene chloride was detected at 5.9 ug/L, however, this detection was most likely due to a laboratory artifact.

Results from 1997 through 2004 are not displayed.

Notes:
Results in micrograms per liter (ug/l).
ND - Not Detected - analyte not detected above laboratory method detection limit of 5.0 ug/L.
Samples were analyzed for VOCs using USEPA Method 8260 B.

NA - Not Available.
J - Estimated value.

Notes:
Results in micrograms per liter (ug/l).
ND - Not Detected - analyte not detected above laboratory method detection limit of 5.0 ug/L.
Samples were analyzed for VOCs using USEPA Method 8260 B.

NA - Not Available.
J - Estimated value.

APPENDIX A

Monthly O&M Reports

7428 Rockville Road, Indianapolis, IN 46214

June 10, 2016

Mr. Joseph Bianchi
Group Manager, EHS & Support Services
AMPHENOL AEROSPACE
40-60 Delaware Avenue
Sidney, NY 13838

Re: OPERATION AND MAINTENANCE OF THE APPROVED IMPLEMENTED CORRECTIVE MEASURE
Former Amphenol Facility
980 B Hurricane Road
Franklin, Indiana

Dear Mr. Bianchi:

Enclosed, please find a summary of the operation and maintenance (O&M) and gauging activities completed by IWM Consulting Group, LLC (IWM) at the above-referenced site. This report summarizes the activities completed during the April 29 through May 27, 2016 reporting period. IWM personnel inspected the site on a regular basis to monitor system operations and ground water recovery and treatment.

Groundwater Level Measurements

On May 13, 2016, IWM personnel gauged the monitoring well network at the site using an electronic oil/water interface probe to determine the depth to water and the presence of detectable thickness of liquid-phase hydrocarbons. Depth to water in the monitoring wells ranged from 7.69 feet below top of casing (TOC) in MW-9 to 17.00 feet below TOC in MW-22. Liquid-phase hydrocarbons were not detected within the monitoring and recovery well network at the site. Recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 were operational during groundwater gauging activities. The PVC fitting for the influent line of recovery well RW-2 was found to be cracked, allowing influent groundwater to return down the well casing and enter the well vault. Subsequently, a depth to water measurement was not collected from RW-2 on May 13, 2016. **Figure 1** is a site plan illustrating pertinent site features and well locations. The groundwater elevation data is summarized in **Attachment A**, and a Groundwater Elevation Map based on the May 13, 2016 depth to water measurements has been included as **Figure 2**.

Groundwater Treatment System

From April 29 through May 27, 2016, approximately 1,178,024 gallons of groundwater were treated and discharged from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5. Based on data provided by EMCON, Handex, and IWM field data sheets, the total volume of groundwater recovered to date is approximately 224,431,517 gallons. The average influent groundwater recovery rate from April 29 through May 27, 2016 was approximately 29.22 gallons per minute. **Attachment B** includes a table and a graph illustrating the recovery rates to date, and **Attachment C** contains copies of Field Data Sheets completed by IWM personnel.

IWM personnel mobilized to the site on May 13, 2016 to complete bi-weekly and monthly system operation and maintenance activities. The PVC fitting for the influent line of recovery well RW-2 was found to be

cracked and the fitting was repaired on May 13, 2016. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on May 13, 2016.

IWM personnel mobilized to the site on May 18, 2016 to complete quarterly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on May 18, 2016.

IWM personnel mobilized to the site on May 19 and 20, 2016 to complete roof repairs, including installing new shingles and re-sealing the roof where the air stripper vent pipe exits, to the treatment system building. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on May 19 and 20, 2016.

At the request of David Dowden, IWM personnel mobilized to the site on May 25, 2016 in order to temporarily deactivate the groundwater recovery and treatment system during an investigation by commercial sewer cleaning contractors to ascertain the cause of the flooded sewer line and vault onsite. During the investigation, a buildup of debris was found in the sewer line onsite, which reduced the discharge flow from the sewer system onsite and subsequently flooded the sewer system and vault. The groundwater recovery and treatment system was reactivated following the completion of the sewer investigation. The groundwater recovery and treatment system was completely operation upon arrival and departure from the site on May 25, 2016.

IWM personnel mobilized to the site on May 27, 2016 to complete bi-weekly system operation and maintenance activities and to obtain quarterly system samples. A number of the float sensors for recovery wells RW-1, RW-2, and RW-3 were found to be malfunctioning and were replaced on May 27, 2016. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on May 27, 2016.

Quarterly Treatment System Sampling

On May 27, 2016, influent samples from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 and a combined effluent sample were obtained to evaluate the groundwater treatment system. Each of the influent sample taps was allowed to run for at least 10 seconds. Prior to sampling, water flow from the tap was reduced to minimize turbulence and agitation. All samples were submitted to Pace Analytical Services, Inc. (Pace), located in Indianapolis, Indiana for volatile organic compound (VOC) analysis by SW-846 Method 8260.

Laboratory analytical results from the May 27, 2016 quarterly system sampling activities indicated the presence of 1,1,1-trichloroethane and trichloroethene in groundwater samples obtained from recovery wells RW-1, RW-2, RW-3, and RW-5. Cis-1,2-dichloroethene was detected in the groundwater samples obtained from recovery wells RW-2, RW-3, and RW-5. Tetrachloroethene was detected in the groundwater samples obtained from recovery wells RW-2, RW-3, RW-4, and RW-5. No VOCs were detected in the system's combined effluent sample.

Historic quarterly system sampling analytical results are summarized in **Table 1**. Laboratory data sheets are provided in **Attachment D**.

Schedule of Activities

Monthly and biweekly system operation and maintenance activities are scheduled for the month of June 2016. Site visits are scheduled for the weeks beginning June 6 and June 20, 2016. The information from these site inspections will be included in the June 2016 Progress Report.

Should you have any questions regarding this site or information summarized within this report, please contact the undersigned at (317) 347-1111. IWM appreciates the opportunity to provide environmental services to Amphenol Corporation.

Sincerely,

IWM CONSULTING GROUP, LLC

Notes:
Results in micrograms per liter (ug/l).
(1) ND - Not Detected - analyte not detected above laboratory method detection limit.
(2) NS - Not Sampled, RW-1 not in operation during April 1996 and November 1997 sampling events.
E - Trichloroethane value for RW-1 during the November 13, 1998 sampling event is an estimated value only.

Results from 1997 through 2004 are not displayed.

Notes:
Results in micrograms per liter (ug/l).
* - Naphthalene and MTBE were detected at 18 and 17 ug/L, respectively; however, these detections are most likely due to laboratory artifacts or handling issues.
** - Methylene chloride was detected at 5.9 ug/L, however, this detection was most likely due to a laboratory artifact.

Results from 1997 through 2004 are not displayed.

Notes:

- Data prior to 4/12/96 was collected by EMCON.
- A new flow baseline (zero cumulative flow) was established on August 3, 1995, due to flow meter replacement.
- Erroneous flow meter reading from RW-3 on 10/1/96.
- Due to a flow meter malfunction, the totalizer for RW-2 showed a negative flow of 1,051 gallons on January 14, 1997.
- Due to a flow meter malfunction, the totalizer for RW-3 showed a negative flowage of 1,538 gallons, 19,689 gallons, and 20,197 gallons on March 14, March 28, and May 7, 1997, respectively.
- Due to a flow meter malfunction, the total gallons pumped between July 2 and July 16, 1998 was estimated at 10 gpm for RW-2 and RW-3.
- Recovery wells converted from pneumatic to electrical submersible pumps in March 1999.
- Recovery well RW-4 installed late February 1999.
- Recovery well RW-5 was initiated on July 20, 2010.
- Recovery wells RW-1, RW-2, RW-3 and RW-4 were developed on May 15, 2000.
- NEEP Systems air stripper installed on August 29 through August 31, 2000.
- New totalizer installed for Recovery well RW-5 on March 20, 2015, the total gallons pumped from recovery well RW-5 during March 2015 was estimated at 8.5 gpm.

RE: Project: Amphenol
Pace Project No.: 50146137

Dear Mr. Newell:
Enclosed are the analytical results for sample(s) received by the laboratory on May 27, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kenneth Hunt

QUALIFIERS

Project: Amphenol
Pace Project No.: 50146137

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

IWM CONSULTING GROUP

7428 Rockville Road, Indianapolis, IN 46214

July 8, 2016

Mr. Joseph Bianchi
Group Manager, EHS & Support Services
AMPHENOL AEROSPACE
40-60 Delaware Avenue
Sidney, NY 13838

Re: OPERATION AND MAINTENANCE OF THE APPROVED IMPLEMENTED CORRECTIVE MEASURE
Former Amphenol Facility
980 B Hurricane Road
Franklin, Indiana

Dear Mr. Bianchi:

Enclosed, please find a summary of the operation and maintenance (O&M) and gauging activities completed by IWM Consulting Group, LLC (IWM) at the above-referenced site. This report summarizes the activities completed during the May 27 through June 24, 2016 reporting period. IWM personnel inspected the site on a regular basis to monitor system operations and ground water recovery and treatment.

Groundwater Level Measurements

On June 10, 2016, IWM personnel gauged the monitoring well network at the site using an electronic oil/water interface probe to determine the depth to water and the presence of detectable thickness of liquid-phase hydrocarbons. Depth to water in the monitoring wells ranged from 8.38 feet below top of casing (TOC) in MW-9 to 17.32 feet below TOC in MW-22. Liquid-phase hydrocarbons were not detected within the monitoring and recovery well network at the site. Recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 were operational during groundwater gauging activities. **Figure 1** is a site plan illustrating pertinent site features and well locations. The groundwater elevation data is summarized in **Attachment A**, and a Groundwater Elevation Map based on the June 10, 2016 depth to water measurements has been included as **Figure 2**.

Groundwater Treatment System

From May 27 through June 24, 2016, approximately 1,147,864 gallons of groundwater were treated and discharged from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5. Based on data provided by EMCON, Handex, and IWM field data sheets, the total volume of groundwater recovered to date is approximately 225,579,381 gallons. The average influent groundwater recovery rate from May 27 through June 24, 2016 was approximately 28.47 gpm. **Attachment B** includes a table and a graph illustrating the recovery rates to date, and **Attachment C** contains copies of Field Data Sheets completed by IWM personnel.

IWM personnel mobilized to the site on June 10, 2016 to complete monthly and biweekly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on June 10, 2016.

IWM personnel mobilized to the site on June 24, 2016 to complete biweekly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on June 24, 2016.

Schedule of Activities

Monthly and biweekly system operation and maintenance activities are scheduled for the month of July 2016. Site visits are scheduled for the weeks beginning July 4 and July 18, 2016. The information from these site inspections will be included in the July 2016 Progress Report.

Should you have any questions regarding this site or information summarized within this report, please contact the undersigned at (317) 347-1111. IWM Consulting appreciates the opportunity to provide environmental services to Amphenol Corporation.

Sincerely,

IWM CONSULTING GROUP, LLC

Christopher R. Newell, LPG #2397
Project Manager

Bradley E. Gentry, LPG #2165

Notes:

- Data prior to 4/12/96 was collected by EMCON.
- A new flow baseline (zero cumulative flow) was established on August 3, 1995, due to flow meter replacement.
- Erroneous flow meter reading from RW-3 on 10/1/96.
- Due to a flow meter malfunction, the totalizer for RW-2 showed a negative flow of 1,051 gallons on January 14, 1997.
- Due to a flow meter malfunction, the totalizer for RW-3 showed a negative flowage of 1,538 gallons, 19,689 gallons, and 20,197 gallons on March 14, March 28, and May 7, 1997, respectively.
- Due to a flow meter malfunction, the total gallons pumped between July 2 and July 16, 1998 was estimated at 10 gpm for RW-2 and RW-3.
- Recovery wells converted from pneumatic to electrical submersible pumps in March 1999.
- Recovery well RW-4 installed late February 1999.
- Recovery well RW-5 was initiated on July 20, 2010.
- Recovery wells RW-1, RW-2, RW-3 and RW-4 were developed on May 15, 2000.
- NEEP Systems air stripper installed on August 29 through August 31, 2000.
- New totalizer installed for Recovery well RW-3 on March 20, 2015, the total gallons pumped from recovery well RW-5 during March 2015 was estimated at 8.5 gpm.

Re: OPERATION AND MAINTENANCE OF THE APPROVED IMPLEMENTED CORRECTIVE MEASURE
Former Amphenol Facility
980 B Hurricane Road
Franklin, Indiana

Dear Mr. Bianchi:

Enclosed, please find a summary of the operation and maintenance (O&M) and gauging activities completed by IWM Consulting Group, LLC (IWM) at the above-referenced site. This report summarizes the activities completed during the June 24 through July 22, 2016 reporting period. IWM personnel inspected the site on a regular basis to monitor system operations and ground water recovery and treatment.

Groundwater Level Measurements

On July 8, 2016, IWM personnel gauged the monitoring well network at the site using an electronic oil/water interface probe to determine the depth to water and the presence of detectable thickness of liquid-phase hydrocarbons. Depth to water in the monitoring wells ranged from 7.88 feet below top of casing (TOC) in MW-9 to 17.13 feet below TOC in MW-22. Liquid-phase hydrocarbons were not detected within the monitoring and recovery well network at the site. Recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 were operational during groundwater gauging activities. **Figure 1** is a site plan illustrating pertinent site features and well locations. The groundwater elevation data is summarized in **Attachment A**, and a Groundwater Elevation Map based on the July 8, 2016 depth to water measurements has been included as **Figure 2**.

Groundwater Treatment System

From June 24 through July 22, 2016, approximately 1,117,370 gallons of groundwater were treated and discharged from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5. Based on data provided by EMCON, Handex, and IWM field data sheets, the total volume of groundwater recovered to date is approximately 226,696,751 gallons. The average influent groundwater recovery rate from June 24 through July 22, 2016 was approximately 27.71 gpm. **Attachment B** includes a table and a graph illustrating the recovery rates to date, and **Attachment C** contains copies of Field Data Sheets completed by IWM personnel.

IWM personnel mobilized to the site on July 8, 2016 to complete monthly and biweekly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on July 8, 2016.

IWM personnel mobilized to the site on July 22, 2016 to complete biweekly system operation and maintenance activities. The connection fitting from the wellhead to the influent line inside the well vault of recovery well RW-2 was found to be leaking and was repaired on July 22, 2016. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on July 22, 2016.

Schedule of Activities

Quarterly, monthly and biweekly system operation and maintenance activities are scheduled for the month of August 2016. Site visits are scheduled for the weeks beginning August 1 and August 15, 2016. The information from these site inspections will be included in the August 2016 progress report.

Should you have any questions regarding this site or information summarized within this report, please contact the undersigned at (317) 347-1111. IWM Consulting appreciates the opportunity to provide environmental services to Amphenol Corporation.

Sincerely,

IWM CONSULTING GROUP, LLC

Notes:

- Data prior to 4/12/96 was collected by EMCON.
- A new flow baseline (zero cumulative flow) was established on August 3, 1995, due to flow meter replacement.
- Erroneous flow meter reading from RW-3 on 10/1/96.
- Due to a flow meter malfunction, the totalizer for RW-2 showed a negative flow of 1,051 gallons on January 14, 1997.
- Due to a flow meter malfunction, the totalizer for RW-3 showed a negative flowage of 1,538 gallons, 19,689 gallons, and 20,197 gallons on March 14, March 28, and May 7, 1997, respectively.
- Due to a flow meter malfunction, the total gallons pumped between July 2 and July 16, 1998 was estimated at 10 gpm for RW-2 and RW-3.
- Recovery wells converted from pneumatic to electrical submersible pumps in March 1999.
- Recovery well RW-4 installed late February 1999.
- Recovery well RW-5 was initiated on July 20, 2010.
- Recovery wells RW-1, RW-2, RW-3 and RW-4 were developed on May 15, 2000.
- NEEP Systems air stripper installed on August 29 through August 31, 2000.
- New totalizer installed for Recovery well RW-5 on March 20, 2015, the total gallons pumped from recovery well RW-5 during March 2015 was estimated at 8.5 gpm.

September 9, 2016

Mr. Joseph Bianchi
Group Manager, EHS & Support Services
AMPHENOL AEROSPACE
40-60 Delaware Avenue
Sidney, NY 13838

Re: OPERATION AND MAINTENANCE OF THE APPROVED IMPLEMENTED CORRECTIVE MEASURE
Former Amphenol Facility
980 B Hurricane Road
Franklin, Indiana

Dear Mr. Bianchi:

Enclosed, please find a summary of the operation and maintenance (O&M) and gauging activities completed by IWM Consulting Group, LLC (IWM) at the above-referenced site. This report summarizes the activities completed during the July 22 through August 18, 2016 reporting period. IWM personnel inspected the site on a regular basis to monitor system operations and ground water recovery and treatment.

Groundwater Level Measurements

On August 4, 2016, IWM personnel gauged the monitoring well network at the site using an electronic oil/water interface probe to determine the depth to water and the presence of detectable thickness of liquid-phase hydrocarbons. Depth to water in the monitoring wells ranged from 8.23 feet below top of casing (TOC) in MW-9 to 17.73 feet below TOC in MW-28. Liquid-phase hydrocarbons were not detected within the monitoring and recovery well network at the site. Recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 were operational during groundwater gauging activities. **Figure 1** is a site plan illustrating pertinent site features and well locations. The groundwater elevation data is summarized in **Attachment A**, and a Groundwater Elevation Map based on the August 4, 2016 depth to water measurements has been included as **Figure 2**.

Groundwater Treatment System

From July 22 through August 18, 2016, approximately 1,091,030 gallons of groundwater were treated and discharged from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5. Based on data provided by EMCON, Handex, and IWM field data sheets, the total volume of groundwater recovered to date is approximately 227,787,781 gallons. The average influent groundwater recovery rate from July 22 through August 18, 2016 was approximately 28.06 gallons per minute. **Attachment B** includes a table and a graph illustrating the recovery rates to date, and **Attachment C** contains copies of Field Data Sheets completed by IWM personnel.

IWM personnel mobilized to the site on August 4, 2016 to complete quarterly, bi-weekly, and monthly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on August 4, 2016.

IWM personnel mobilized to the site on August 18, 2016 to complete bi-weekly system operation and maintenance activities and to obtain quarterly system samples. The influent line for recovery well RW-2 was found to have a crack inside the remediation system building and was repaired on August 18, 2016. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on August 18, 2016.

Quarterly Treatment System Sampling

On August 18, 2016, influent samples from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 and a combined effluent sample were obtained to evaluate the groundwater treatment system. Each of the influent sample taps was allowed to run for at least 10 seconds. Prior to sampling, water flow from the tap was reduced to minimize turbulence and agitation. All samples were submitted to Pace Analytical Services, Inc. (Pace), located in Indianapolis, Indiana for volatile organic compound (VOC) analysis by SW-846 Method 8260.

Laboratory analytical results from the August 18, 2016 quarterly system sampling activities indicated the presence of 1,1,1-trichloroethane and trichloroethene in groundwater samples obtained from recovery wells RW-1, RW-2, RW-3, and RW-5. Cis-1,2-dichloroethene was detected in the groundwater samples obtained from recovery wells RW-2, RW-3, and RW-5. Tetrachloroethene was detected in the groundwater samples obtained from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5. 1,1-Dichloroethane was detected in the groundwater sample obtained from recovery well RW-2. No VOCs were detected in the system's combined effluent sample.

Historic quarterly system sampling analytical results are summarized in **Table 1**. Laboratory data sheets are provided in **Attachment D**.

Schedule of Activities

Monthly and biweekly system operation and maintenance activities are scheduled for the month of September 2016. Site visits are scheduled for the weeks beginning August 29, September 12, and September 26, 2016. The information from these site inspections will be included in the September 2016 Progress Report.

Should you have any questions regarding this site or information summarized within this report, please contact the undersigned at (317) 347-1111. IWM appreciates the opportunity to provide environmental services to Amphenol Corporation.

Sincerely,

IWM CONSULTING GROUP, LLC

Christopher R. Newell, LPG
Project Manager

Bradley E. Gentry, LPG

Notes:
Results in micrograms per liter (ug/l).
(1) ND - Not Detected - analyte not detected above laboratory method detection limit.
(2) NS - Not Sampled, RW-1 not in operation during April 1996 and November 1997 sampling events.
E - Trichloroethane value for RW-1 during the November 13, 1998 sampling event is an estimated value only.

Results from 1997 through 2004 are not displayed.

Notes:
Results in micrograms per liter (ug/l).
* - Naphthalene and MTBE were detected at 18 and 17 ug/L, respectively; however, these detections are most likely due to laboratory artifacts or handling issues.
** - Methylene chloride was detected at 5.9 ug/L, however, this detection was most likely due to a laboratory artifact.

Results from 1997 through 2004 are not displayed.

Notes:

- Data prior to 4/12/96 was collected by EMCON.
- A new flow baseline (zero cumulative flow) was established on August 3, 1995, due to flow meter replacement.
- Erroneous flow meter reading from RW-3 on 10/1/96.
- Due to a flow meter malfunction, the totalizer for RW-2 showed a negative flow of 1,051 gallons on January 14, 1997.
- Due to a flow meter malfunction, the totalizer for RW-3 showed a negative flowage of 1,538 gallons, 19,689 gallons, and 20,197 gallons on March 14, March 28, and May 7, 1997, respectively.
- Due to a flow meter malfunction, the total gallons pumped between July 2 and July 16, 1998 was estimated at 10 gpm for RW-2 and RW-3.
- Recovery wells converted from pneumatic to electrical submersible pumps in March 1999.
- Recovery well RW-4 installed late February 1999.
- Recovery well RW-5 was initiated on July 20, 2010.
- Recovery wells RW-1, RW-2, RW-3 and RW-4 were developed on May 15, 2000.
- NEEP Systems air stripper installed on August 29 through August 31, 2000.
- New totalizer installed for Recovery well RW-5 on March 20, 2015, the total gallons pumped from recovery well RW-5 during March 2015 was estimated at 8.5 gpm.

RE: Project: Amphenol
Pace Project No.: 50152274

Dear Mr. Newell:
Enclosed are the analytical results for sample(s) received by the laboratory on August 18, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kenneth Hunt

QUALIFIERS

Project: Amphenol
Pace Project No.: 50152274

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

IWM CONSULTING GROUP

7428 Rockville Road, Indianapolis, IN 46214

October 3, 2016

Mr. Joseph Bianchi
Group Manager, EHS & Support Services
AMPHENOL AEROSPACE
40-60 Delaware Avenue
Sidney, NY 13838

Re: OPERATION AND MAINTENANCE OF THE APPROVED IMPLEMENTED CORRECTIVE MEASURE
Former Amphenol Facility
980 B Hurricane Road
Franklin, Indiana

Dear Mr. Bianchi:

Enclosed, please find a summary of the operation and maintenance (O&M) and gauging activities completed by IWM Consulting Group, LLC (IWM) at the above-referenced site. This report summarizes the activities completed during the August 18 through September 30, 2016 reporting period. IWM personnel inspected the site on a regular basis to monitor system operations and ground water recovery and treatment.

Groundwater Level Measurements

On September 2, 2016, IWM personnel gauged the monitoring and recovery well network at the site using an electronic oil/water interface probe to determine the depth to water and the presence of detectable thickness of liquid-phase hydrocarbons. Depth to water in the monitoring wells ranged from 8.48 feet below top of casing (TOC) in MW-9 to 17.18 feet below TOC in MW-22. Liquid-phase hydrocarbons were not detected within the monitoring and recovery well network at the site. Recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 were operational during groundwater gauging activities. **Figure 1** is a site plan illustrating pertinent site features and well locations. The groundwater elevation data is summarized in **Attachment A**, and a Groundwater Elevation Map based on the September 2, 2016 depth to water measurements has been included as **Figure 2**.

Groundwater Treatment System

From August 18 through September 30, 2016, approximately 1,667,389 gallons of groundwater were treated and discharged from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5. Based on data provided by EMCON, Handex, and IWM field data sheets, the total volume of groundwater recovered to date is approximately 229,455,170 gallons. The average influent groundwater recovery rate from August 18 through September 30, 2016 was approximately 26.93 gpm. **Attachment B** includes a table and a graph illustrating the recovery rates to date, and **Attachment C** contains copies of Field Data Sheets completed by IWM personnel.

IWM personnel mobilized to the site on September 2, 2016 to complete monthly and biweekly system O&M activities and to complete sequestering agent O&M activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on September 2, 2016.

IWM personnel mobilized to the site on September 16, 2016 to complete biweekly system O&M activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on September 16, 2016.

IWM personnel mobilized to the site on September 27, 2016 to conduct alarm response activities due to a power outage causing the system to shut down. The groundwater recovery and treatment system was reactivated during the alarm response visit and was completely operational upon departure from the site on September 27, 2016.

IWM personnel mobilized to the site on September 30, 2016 to complete biweekly system O&M activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on September 30, 2016.

Schedule of Activities

Monthly and biweekly system O&M activities and semi-annual groundwater sampling activities are scheduled for the month of October 2016. Site visits are scheduled for the weeks beginning October 10 and October 24, 2016. The information from these site inspections will be included in the October 2016 Progress Report.

Should you have any questions regarding this site or information summarized within this report, please contact the undersigned at (317) 347-1111. IWM Consulting appreciates the opportunity to provide environmental services to Amphenol Corporation.

Sincerely,

IWM CONSULTING GROUP, LLC

Christopher R. Newell, LPG
Project Manager

Bradley E. Gentry, LPG
Vice-President

Notes:

- Data prior to 4/12/96 was collected by EMCON.
- A new flow baseline (zero cumulative flow) was established on August 3, 1995, due to flow meter replacement.
- Erroneous flow meter reading from RW-3 on 10/1/96.
- Due to a flow meter malfunction, the totalizer for RW-2 showed a negative flow of 1,051 gallons on January 14, 1997.
- Due to a flow meter malfunction, the totalizer for RW-3 showed a negative flowage of 1,538 gallons, 19,689 gallons, and 20,197 gallons on March 14, March 28, and May 7, 1997, respectively.
- Due to a flow meter malfunction, the total gallons pumped between July 2 and July 16, 1998 was estimated at 10 gpm for RW-2 and RW-3.
- Recovery wells converted from pneumatic to electrical submersible pumps in March 1999.
- Recovery well RW-4 installed late February 1999.
- Recovery well RW-5 was initiated on July 20, 2010.
- Recovery wells RW-1, RW-2, RW-3 and RW-4 were developed on May 15, 2000.
- NEEP Systems air stripper installed on August 29 through August 31, 2000.
- New totalizer installed for Recovery well RW-5 on March 20, 2015, the total gallons pumped from recovery well RW-5 during March 2015 was estimated at 8.5 gpm.

Re: OPERATION AND MAINTENANCE OF THE APPROVED IMPLEMENTED CORRECTIVE MEASURE
Former Amphenol Facility
980 B Hurricane Road
Franklin, Indiana

Dear Mr. Bianchi:

Enclosed, please find a summary of the operation and maintenance (O&M) and gauging activities completed by IWM Consulting Group, LLC (IWM) at the above-referenced site. This report summarizes the activities completed during the September 30 through October 27, 2016 reporting period. IWM personnel inspected the site on a regular basis to monitor system operations and ground water recovery and treatment.

Groundwater Level Measurements

On October 13, 2016, IWM personnel gauged the monitoring well network at the site using an electronic oil/water interface probe to determine the depth to water and the presence of detectable thickness of liquid-phase hydrocarbons. Depth to water in the monitoring wells ranged from 9.53 feet below top of casing (TOC) in MW-9 to 17.86 feet below TOC in MW-22. Liquid-phase hydrocarbons were not detected within the monitoring and recovery well network at the site. Recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 were operational during groundwater gauging activities. **Figure 1** is a site plan illustrating pertinent site features and well locations. The groundwater elevation data is summarized in **Attachment A**, and a Groundwater Elevation Map based on the October 13, 2016 depth to water measurements has been included as **Figure 2**.

Groundwater Treatment System

From September 30 through October 27, 2016, approximately 1,005,585 gallons of groundwater were treated and discharged from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5. Based on data provided by EMCON, Handex, and IWM field data sheets, the total volume of groundwater recovered to date is approximately 230,460,755 gallons. The average influent groundwater recovery rate from September 30 through October 27, 2016 was approximately 25.86 gallons per minute. **Attachment B** includes a table and a graph illustrating the recovery rates to date, and **Attachment C** contains copies of Field Data Sheets completed by IWM personnel.

IWM personnel mobilized to the site on October 13, 2016 to complete bi-weekly and monthly system operation and maintenance activities and to complete semi-annual groundwater sampling activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on October 13, 2016.

IWM personnel mobilized to the site on October 27, 2016 to complete bi-weekly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on October 27, 2016.

Semi-Annual Groundwater Sampling and Analysis

On October 13, 2016, groundwater samples were obtained from monitoring wells IT-2, IT-3, MW-12R, MW-20, MW-22, MW-28, MW-29, and MW-30 for VOC analysis to evaluate current groundwater quality at the site. Groundwater samples were collected using dedicated, disposable, bottom-loading bailers to reduce the risk of cross-contamination. Three-well volumes were purged prior to sample collection. Samples were submitted to Pace Analytical Services, Inc. (Pace) for VOC analysis using US EPA SW 846 Method 8260. Groundwater sampling logs are provided in **Attachment D**.

The highest VOC concentrations were detected in the groundwater samples obtained from monitoring well MW-12R (954.5 µg/L total VOCs) located adjacent to recovery well RW-2 and monitoring well MW-22 (705.5 µg/L total VOCs) located 30 feet northwest of recovery well RW-3. Therefore, the groundwater recovery and treatment system is effectively targeting the area of greatest VOC concentration.

1,1-Dichloroethane was detected in monitoring well IT-2. Trichloroethene was detected in monitoring wells IT-2, MW-12R, MW-22, MW-28, and MW-30. Cis-1,2-dichloroethene was detected in monitoring wells IT-2, MW-12R, and MW-22. 1,1,1-Trichloroethane was detected in monitoring wells MW-12R, MW-22, MW-28, and MW-30. Tetrachloroethene was detected in monitoring wells MW-12R, MW-22, and MW-28.

No VOCs were detected in the groundwater samples obtained from monitoring wells IT-3, MW-20, and MW-29.

Overall, the groundwater recovery and treatment system, along with supplemental activities completed in 2010 and 2011, appear to be effectively reducing VOC concentrations at the site. When comparing the highest observed historical total VOC concentrations (generally before or immediately following the start of the groundwater recovery and treatment system in March 1995) to the results of the October 2016 groundwater sampling event, the following total VOC concentration reductions have been observed:

Well ID	Highest Total VOC Concentration (Date)	October 2016 Total VOC Concentration	Percent Reduction
IT-2	289 µg/L (8/1/86)	43.1 µg/L	85.09%
IT-3	560 µg/L (2/1/86)	Non-detect	99.99%
MW-12/12R	64,680 µg/L (5/1/86)	954.5 µg/L	98.52%
MW-22	6,600 µg/L (10/9/96)	705.5 µg/L	89.31%
MW-28	1,015 µg/L (2/17/93)	59.0 µg/L	94.19%
MW-30	106 (9/29/00)	16.3 µg/L	84.62%

A trip blank and a field duplicate sample (MW-22) were obtained per IDEM Minimum Data Documentation Requirements dated February 13, 2003. The trip blank and the duplicate sample were analyzed for VOCs. The trip blank was below laboratory detection limits for all constituents and the duplicate analysis was relatively consistent with the sample which was duplicated. Groundwater

sampling field logs are provided in **Attachment D**. The laboratory analytical report is provided in **Attachment E**. A summary of groundwater analytical results is included in **Table 1**.

Schedule of Activities

Quarterly, monthly, and biweekly system operation and maintenance activities are scheduled for the month of November 2016. Site visits are scheduled for the weeks beginning November 7 and November 28, 2016. The information from these site inspections will be included in the November 2016 Progress Report.

Should you have any questions regarding this site or information summarized within this report, please contact the undersigned at (317) 347-1111. IWM Consulting appreciates the opportunity to provide environmental services to Amphenol Corporation.

Sincerely,

IWM CONSULTING GROUP, LLC

Christopher R. Newell, LPG

Notes:
Results in micrograms per liter (ug/l).
ND - Not Detected - analyte not detected above laboratory method detection limit of 5.0 ug/L.
Samples were analyzed for VOCs using USEPA Method 8260 B.

NA - Not Available.
J - Estimated value.

Notes:

- Data prior to 4/12/96 was collected by EMCON.
- A new flow baseline (zero cumulative flow) was established on August 3, 1995, due to flow meter replacement.
- Erroneous flow meter reading from RW-3 on 10/1/96.
- Due to a flow meter malfunction, the totalizer for RW-2 showed a negative flow of 1,051 gallons on January 14, 1997.
- Due to a flow meter malfunction, the totalizer for RW-3 showed a negative flowage of 1,538 gallons, 19,689 gallons, and 20,197 gallons on March 14, March 28, and May 7, 1997, respectively.
- Due to a flow meter malfunction, the total gallons pumped between July 2 and July 16, 1998 was estimated at 10 gpm for RW-2 and RW-3.
- Recovery wells converted from pneumatic to electrical submersible pumps in March 1999.
- Recovery well RW-4 installed late February 1999.
- Recovery well RW-5 was initiated on July 20, 2010.
- Recovery wells RW-1, RW-2, RW-3 and RW-4 were developed on May 15, 2000.
- NEEP Systems air stripper installed on August 29 through August 31, 2000.
- New totalizer installed for Recovery well RW-5 on March 20, 2015, the total gallons pumped from recovery well RW-5 during March 2015 was estimated at 8.5 gpm.

RE: Project: Amphenol
Pace Project No.: 50156613

Dear Mr. Newell:
Enclosed are the analytical results for sample(s) received by the laboratory on October 13, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kenneth Hunt

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: Amphenol
Pace Project No.: 50156613

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: Amphenol
Pace Project No.: 50146137

Dear Mr. Newell:
Enclosed are the analytical results for sample(s) received by the laboratory on May 27, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kenneth Hunt

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, Inc..

QUALIFIERS

Project: Amphenol
Pace Project No.: 50146137

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: Amphenol
Pace Project No.: 50152274

Dear Mr. Newell:
Enclosed are the analytical results for sample(s) received by the laboratory on August 18, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kenneth Hunt
kenneth.hunt@pacelabs.com

QUALIFIERS

Project: Amphenol
Pace Project No.: 50152274

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

RE: Project: Amphenol
Pace Project No.: 50156613

Dear Mr. Newell:
Enclosed are the analytical results for sample(s) received by the laboratory on October 13, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kenneth Hunt
kenneth.hunt@pacelabs.com
Project Manager

QUALIFIERS

Project: Amphenol
Pace Project No.: 50156613

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.
