Should we be saying anything about our Enforcement planning activities?

After complete our work to provide scientific support to the first responders and investigation officials - primarily air monitoring - as well as information for local officials to make decisions on the evacuation using ASPECT aircraft and air monitoring in the devastated neighborhood - we have now turned our attention to supporting the recovery efforts to the primary state agencies responsible for demolition (NESHAP) and debris management. We are offering regulatory guidance, scientific expertise as well as best practices from previous experience.

It is important to note that ATF is still investigating the scene.

We no longer have a full time daily presence in West.

Hi David,

I am pulling together an issue paper for Bob P. for the HEC budget hearing Thursday. I have info. on the RMP program and prior inspections, etc., but do you have anything on the status of EPA involvement? I have not seen a Situation Report in a few weeks, but if you have anything existing re: air monitoring, any OSC's on-site, etc. that would be great. Thanks
