Got it, thanks! I got an e-mail from Barnes Johnson in HQ that he wanted to know if there were any implications for RCRA regulated units, I will check with Kevin on that. I should have known you would let Heather and I know about anything at FMC☺

Hi, Lisa. This was not at the former FMC facility, but at JR Simplot next door. They gypstack is not a RCRA regulated unit although is the subject of the Phos Acid initiative that Kevin Schanelic is involved with – we have been keeping Kevin in the loop.

If anything (out of the ordinary….) happens at FMC, we will certainly keep you and Heather in the loop.

Beth

Hey, Beth, would you mind copying us on FMC information like this? Thanks,

Lisa

FYI. Please keep us in the loop. Especially if this involves the RCRA portion of the facility. Thanks.

This incident did not impact Waters of the United States nor any down gradient local jurisdictions, but due to heightened concerns by the Shoshone-Bannock Tribes, it may generate some attention.
>
> At approximately 8:15 am local mountain time today (1/22/16), the JR Simplot Company notified the National Response Center of a release of approximatley 6,000 gallons of gypsum waste slurry from their gypsum stack. The release was in the same areas as a November 22nd dike failure which released 250,000 of gypsum wate slurry. The release impacted soil on Simplot and BLM land, outside the boundaries of the Fort Hall reservation. Both EPA and Idaho DEQ have been in contact with Simplot and are coordinating a cleanup plan. The cause of the release is also still under investigation.

Please let me know if you have any questions or concerns.

Thanks!

Beth
