Attention: Mr. George L. McPheeters

Reference: Your letter of November 8, 1966

Gentlemen:

In answer to your question, to the best of our knowledge waste chemicals or waste material from chemical rinse tanks are not being discharged into the City storm sewer system.

Whenever there is an accidental spillage or breakage which could conceivably enter the storm system, we flush with large amounts of fresh water to assure adequate dilution. These events, however, are rare.

As you know, we have an automatic filter on our City water line. When this filter becomes clogged, which happens more often than we like to see, the system is backflushed automatically with plain water, and is allowed to drain into a catch basin and eventually into the storm sewer system. Since this is not chemically treated, we see no reason not to discharge this water into the storm drains.

Very truly yours,

Julius Blank
Facilities Manager
