Subject: [illegible] INSPECTION [illegible]

Wardens Chet Gail and Jim Whitcomb of DFG arrived at [illegible]'s office at [illegible] hours this date to discuss the situation at hand. It was decided that [illegible] possibly more could be found out if an inspection of the plant [illegible] were made.

[illegible] pointed out to the wardens that the purpose of this meeting and inspection was to determine on a cooperative basis, anything existing that would be detrimental to the beneficial uses of the receiving waters, and that [illegible] that might be usable in bringing requirements to the UH people.

WRM and the wardens met at the UH plant and attempted to get someone who might be acquainted with the piping and the plant operations so that they might be able to answer any questions asked, and found that no one at the plant at that time could or would do so. A Mr. Marretti was contacted and we were informed that a Mr. [illegible] (I'm not quite sure of this name) was the man that we should contact, and that he would definitely make an appointment with him for 1000 hours in the morning (June 15, 1980).

WRM agreed that he would bring the boat along, and meet the wardens at the UH plant at that time.

After the discussion with Mr. Marretti, a tour of the dock and storage facilities was made, noting the following:

1. Opened bags and empty bags of various types were noted immediately south of the northerly group of tanks, with labels reading "MALATHION-50%", "DDT-75% Active", "Phosdrin Sulphur--30% Sulphur." [illegible]

2. The tanks immediately northerly of the northernmost buildings apparently contain oil of some sort.

3. Several barrels in the vicinity had poison labels, with "TRICHLOR" and "PERCHLOR" stenciled across the tops of each.

4. Several empty five gallon cans were noted in the area with Shell Chemical labels reading "DIELDREN - 50% Wettable Powder".

5. Several 30 gallon drums with labels reading "ESTERON 10-10" from Dow Chemical [illegible] were noted in a fenced area adjacent and northeast of the tank area.

6. Other drums in the area read - "Ethylene dibromide" (Dow) and weed fumigant.

7. The bags mentioned in item 1 above, were lying adjacent to a bagging machine.

8. Opposite bent 45, a packaging unit with several empty fibre drums with labels reading "DICHLORYL DIPHENYL - 50%".

9. A discharge from the [illegible] of the [illegible] building [illegible]
