On Novemebr 29, 2016, a 60 year old male experienced symptoms after burning a pile of leaves that allegedly had Terro Ant Bait mixed in. He was admitted to the Intensive Care Unit at Mercy Medical Center in Redding, CA.

Shasta CAC investigation revealed that in the early part of summer 2015, he spread two, 3lb bags of Terro Ant Killer, EPA REG # 53883-195-149, around the outside of his residence. Four months later, he raked and burned the leaves around his residence. While burning the leaves he was inhaling the smoke.

The investigation was inconclusive due to the prolonged smoke inhalation and the inability to determine the presence of Terro Ant Killer in the burned leaves. No violations were identified.
