On August 19, 2015, the California Poison Control System issued a Pesticide Incident Report regarding a two year old male possibly ingesting ASANA Insecticide from a water bottle. He was taken by his mother to an emergency room in Yuba county. Due to ongoing vomitting and cough, he was observed overnight, transferred to another health care facility, and admitted.
Yuba CAC investigation revealed that a juice bottle was filled with Asana and brought home to treat their tree. A family member who works in the orchards brought it home. Yuba CAC identified a violation of 3 CCR 6680 Prohibited Containers for Pesticides.
The mother was unwilling to give the information regarding the family member and broke communication with Yuba CAC. The investigation is considered closed.
