3/10/83

Scott Paper

(b) (6) started job (b) (6) RCRA May 1980

at this time it was practice to put barrels of solvents/paints on edge at hog fuel with tractor. It would then be pushed up to conveyor & then go to boiler.

However, at time of accident the material was put some place else. This with a wind & caused fumes to go into boiler room and cause problems with two workers. However these workers did not stop work. They went to hospital after words. This was in April 1981.

The dumping practice was terminated immediatly. The last barrel was stored ~~in~~ April ~~1~~ 30, 1981. They are then put in tank & sprayed into boiler.

Boiler Ash was tested for EP Toxicity & Dioxins. RCRA WPC

- Jim Campbell - Industrial Relations Manager
  (206) 259-7453

- Case appealed to Labor & Industries or civil court.

- The individual in question has a history of seeking a medical disability.

NO Lab chemicals have ever been put on hog fuel.
