Thanks Kevin.

I just arranged with Montrose for Shu-Fang's group to collect a sample from one of Montrose's monitoring wells to help their lab verify their pCBSA testing. She plans to collect several more municipal wells (operating and not operating) and test for pCBSA on Wednesday.

She did not could get cooperation from Golden State Water Company for the wells named Dalton, that she feels are important to test. She said that she could work with us to get access (she has some authority) for the April/May testing round.

I told her that I would pass this information on to you since you will be working with them and the Water Replenishment District to come of up a list. It seems that we may need some time to get access, so it might be a good idea to start working on it.

Have a good weekend. I spoke with the Corps and Del Norte FYR is in great shape. Aerojet GW cleanup is continuing to go very well. We have over 3000 monitoring wells and are adding more to optimize. The AJ model is modern and is being substantially improved with more current data incorporated.

Both are non-detect. (unvalidated results)

State Water Resources Board called and asked to get a sample from Montrose next Wednesday. I called Mike Palmer, and he has to ask up his chain of command.
