No, I have never seen any fire from a smoking rock or Discovery Event area. Jonathan and I also asked Doug Dumont of Parsons when we got back after meeting with you, and he said he has never seen any fire from a Discovery Event. Cliff M.

After returning to the office, I was asked a question about an incident that occurred Friday. According to this individual, CB and I was digging in an area that they were not supposed to and found phosphorus which resulted in a rather large fire. They would not get out of the way for Kase to do their job.

Cliff, is this a correct statement?

I think that from this point forward, smoking events have some sort of photograph being taken documenting the event.
Kelly

As requested, attached is a copy of the initial letter describing the discoveries. I will forward the latest figure under separate e-mail indicating where all discoveries to date have been located.

Jonathan
Good Afternoon. Attached is a letter outlining the timeline for the sequence of events surrounding the discovery of undocumented subgrade conditions through October 6, 2014 and FMC's Plan for disposition of undocumented subgrade P4 contaminated material discoveries. Please don't hesitate to call if you have any questions.
Best Regards,
Marjo
