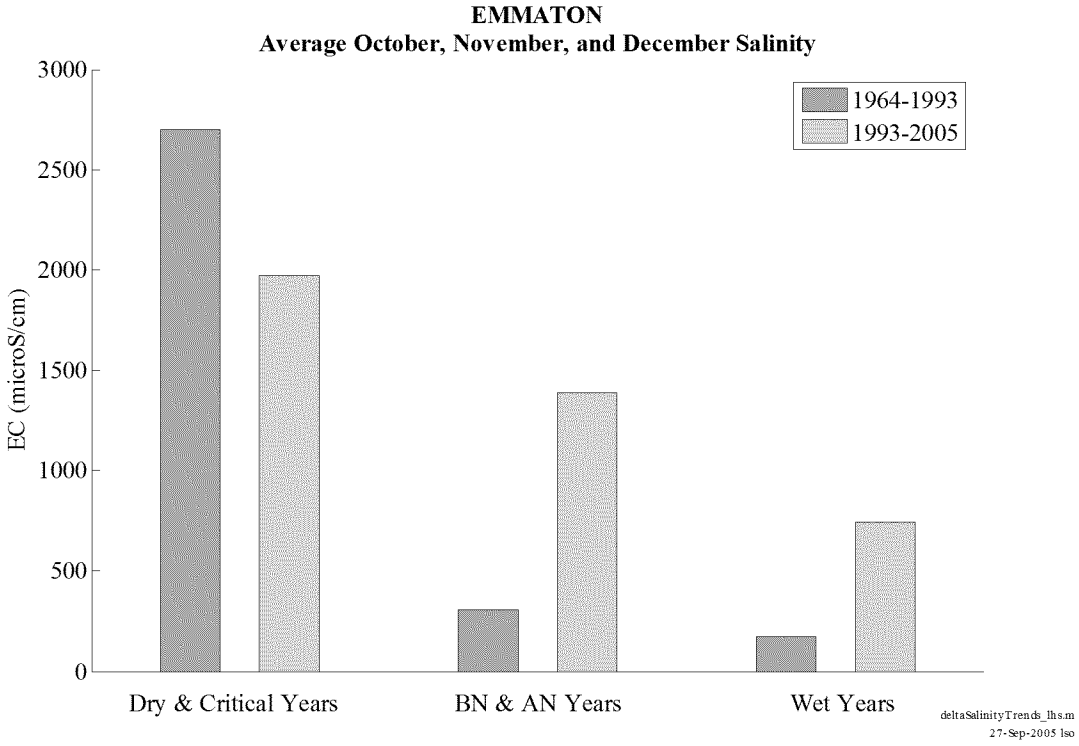
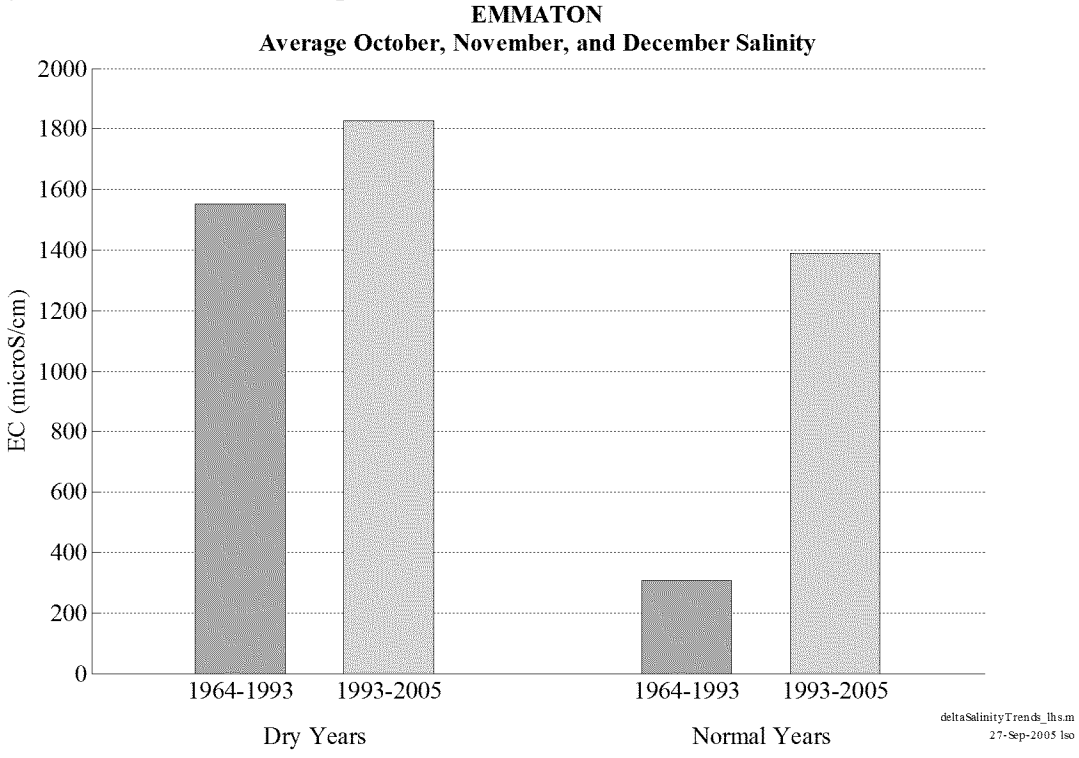
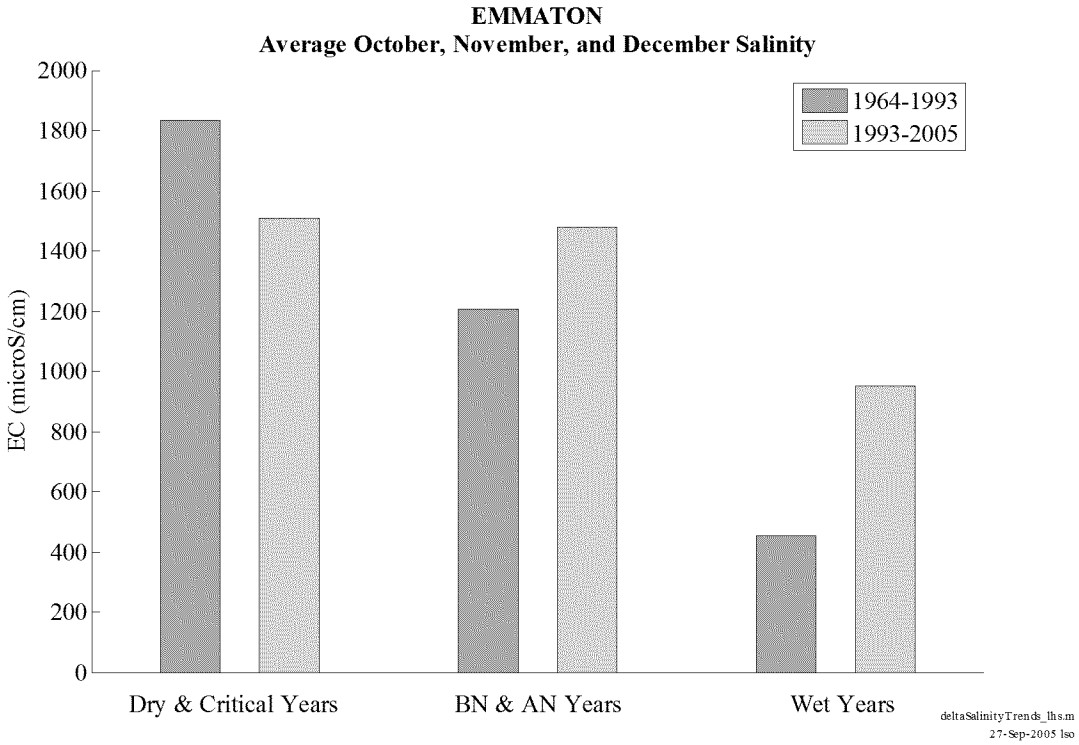
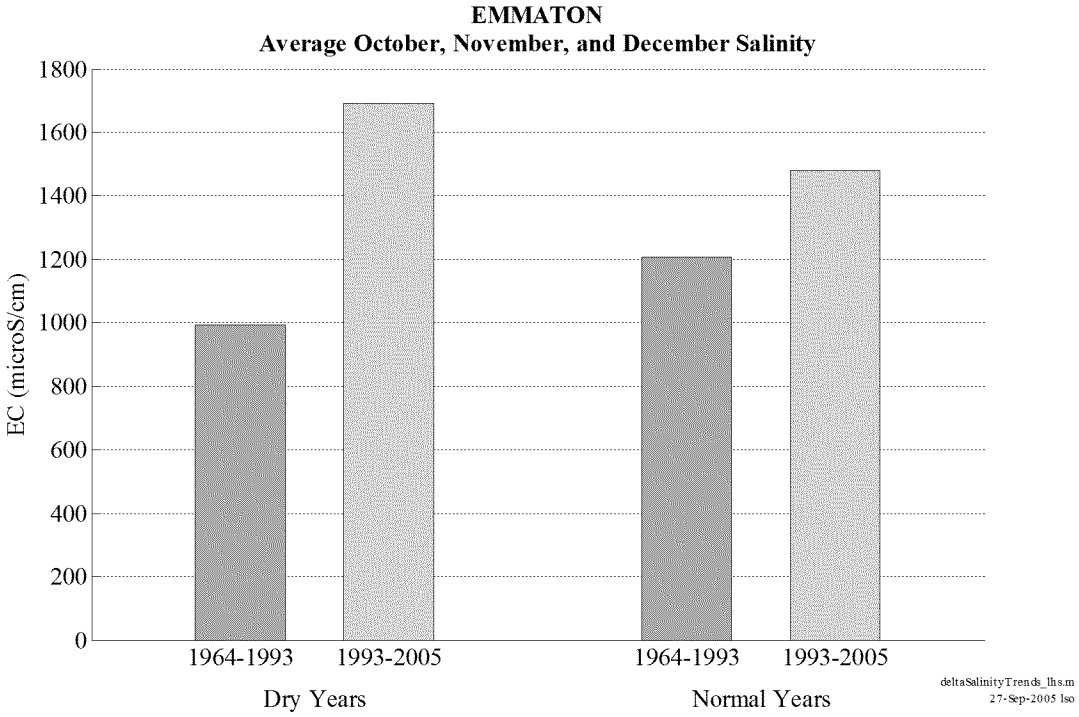
Fall Water Quality at Emmaton, by water year type 9/27/05 LHS
Note: These plots assign Oct-Jan to the previous water year's type (since D1641 requirements are based on the Feb year type estimate).



However, if we remove the Critical Years from the above plot, the pre-1993 water quality in Dry Years is better than the post-1993:







By way of comparison, here are the same plots with the years grouped by their actual, official water year type (Oct-Dec 1999 is water year 2000).
