CONSTRUCTION & READY MIX

April 18, 2011

Jason Livingston
Montana Department of Transportation
Engineering Project Manager
Kalispell Construction
P.O. Box 7308
Kalispell, MT 59904-0308

Project: NH1-1(84)30 Libby Urban
STPP 33-1(35)0 California St – Libby
NH 1-1(86)34 Libby South
Subject: Decontamination of milling equipment.

Mr. Livingston:

I have talked to Rich Thompson with Thompson Contracting concerning the decontamination of our milling equipment, the following is a proposal to the decontamination question posed by Rebecca Thomas.

We will leave all the milling equipment in the milled areas until the milling is complete. After milling is complete we will pull the machines onto TCI's portable decontamination station and clean the equipment. The debris and water used to clean the equipment will be hauled to the Amphitheater on Rainy Creek and disposed of. The water truck used to haul the waste will be flushed at the Amphitheater several times to clean it, filters used in the process will be bagged and disposed of at the blue box at the Libby Landfill.

This process, according to what TCI has told me is similar to what was used when the railroad spur lines were removed several years ago.
Please call if you have any questions or comments concerning this letter, my cell phone is 406- 360-8387.

Sincerely,
LS Jensen Construction & Ready Mix

Stacy Nicholson
Project Manager
