Subject: Revised DRAFT Ethylene Oxide fact sheet

Just clarified that the EPA 2016 IRIS estimated 100-in-1 million risk level concentration is 0.02 $\mu g/m^3$. TCEQ's draft EtO ESL is higher. TCEQ set their draft ESL value at 7 ug/m^3 for a cancer risk level of 1 in 100, 000 (which corresponds to 70 ug/m^3 at 100 in a million risk)
