30 ML2 Field Grade 14-2-2 Tablets

REPELLEX™ Fertilizer Tablets

Visualize a triangle around each plant, 2 inches away from the trunk. Place tablets at each corner of the triangle.
Push tablets into root system 1 - 3 inches down.
Do not place tablet at bottom of transplant hole.
Make sure tablet is in root contact.
Water plants after putting tablets in the ground.

Planted tablet

How REPELLEX™ Fertilizer Tablets Work

The tablet may be placed in the growing container with the plant, in the soil at time of planting, or near the root system in more developed plants. After placement, soil moisture begins to degrade the tablet, allowing the root system of the plant to take up the active ingredients into the upper portion of the target plant.

How long do they last?

1) Annuals / Perennials / Deciduous plants: 1 Full growing season
2) Evergreens / Slower growing Ornamentals: 2 Full growing seasons

Special Advantages

- Easy to handle and convenient
- Premeasured tablets insure uniform and adequate dispersal
- Labour saving: the tablet can be applied in one operation at time of planting

When applied as directed, this fertilizer meets the Washington State standards for arsenic, cadmium, cobalt, mercury, molybdenum, lead, nickel, selenium, and zinc. Do not apply to fruit bearing plants or vegetables intended for consumption. Information regarding the contents and levels of metals in this product is available on the internet at http://www.wa.gov/agr/.
