Hi Judy – I think it was someone from Multnomah County. The main reason is that there is so much data and a very user-friendly tool called the Equity Atlas that is available (as well as people there who are GIS-savvy, who can customize things from the Equity Atlas). I believe that they did meet with the folks who developed EJ Screen, and I imagine provided some feedback?

I think it is much more helpful in parts of the state. We use it to inform our site screening and prioritizing process.

Julie

Subject: Fw: EJ Screen Mapping Tool

Hi Julie - One non-urgent follow-up request. During yesterday's CI call, someone from your agency mentioned that they didn't find EPA's EJ mapping tool helpful and they were using locally sourced information instead. At some point in the future, I'd like to provide some feedback for our EJ unit so that they might be able to improve the tool. Thanks, Judy
