Certification Summary

Client: ARCADIS U.S., Inc.
Project/Site: Lake Calumet Cluster Site

TestAmerica Job ID: 500-103623-1

Laboratory: TestAmerica Chicago

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

Authority	Program	EPA Region	Certification ID	Expiration Date
Illinois	NELAP	5	100201	04-30-16

The following analytes are included in this report, but certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
8260B		Water	Cyclohexane
8260B		Water	Methyl acetate
8260B		Water	Methylcyclohexane

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	3.3
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Received Trip Blank(s) not listed on COC.
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments
No additional comments.

Receipt
The samples were received on 11/6/2015 5:05 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.4º C.

GC/MS VOA
Method(s) 8260B: The following samples were diluted to bring the concentration of target analytes within the calibration range: VAP-HPT13(13-16)-110515 (500-103708-1), VAP-HPT13(19-22)-110615 (500-103708-2) and VAP-HPT13(24-27)-110615 (500-103708-3). Elevated reporting limits (RLs) are provided.

Method(s) 8260B: The following samples were collected in properly preserved vials for analysis of volatile organic compounds (VOCs). However, the pH was outside the required criteria when verified by the laboratory, and corrective action was not possible: VAP-HPT13(13-16)-110515 (500-103708-1), VAP-HPT13(19-22)-110615 (500-103708-2), VAP-HPT13(24-27)-110615 (500-103708-3), VAP-HPT14(10-13)-110615 (500-103708-4), VAP-HPT14(14-17)-110615 (500-103708-5), VAP-HPT14(20-22)-110615 (500-103708-6), VAP-HPT15(10-13)-110615 (500-103708-7) and VAP-HPT15(15-18)-110615 (500-103708-8).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method(s) 6010C: The low-level CCV at line 83 in 6010C batch 500-312673 was above the method acceptance limits of 70-130% recovery for Iron. The samples VAP-HPT13(13-16)-110515 (500-103708-1), VAP-HPT13(19-22)-110615 (500-103708-2), VAP-HPT13(24-27) -110615 (500-103708-3), VAP-HPT14(10-13)-110615 (500-103708-4), VAP-HPT14(14-17)-110615 (500-103708-5), VAP-HPT14(20-22) -110615 (500-103708-6), VAP-HPT15(10-13)-110615 (500-103708-7) and VAP-HPT15(15-18)-110615 (500-103708-8) were bracketed. The low-level standard concentration was insignificant compared with the reported sample results and the sample results were unaffected by the bias at that level. The mid-range bracketing the data were all within the 90-110% recovery limits.

Method(s) 6010C: The following sample was diluted due to the abundance of non-target analytes: VAP-HPT15(10-13)-110615 (500-103708-7). Elevated reporting limits (RLs) are provided.

Method(s) 245.1, 7470A: The continuing calibration verification (CCV) associated with batch 500-312422 recovered above the upper control limit for Hg. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following sample is impacted: (CCV 500-312422/119).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Field Service / Mobile Lab
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Toluene-d8 (Surr)	94		75 - 120		11/19/15 10:02	1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
V	Serial Dilution exceeds the control limits
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL. The data are considered valid because the absolute difference is less than the RL.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

General Chemistry

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Certification Summary

Client: ARCADIS U.S., Inc.
Project/Site: Lake Calumet Cluster Site

TestAmerica Job ID: 500-103708-1

Laboratory: TestAmerica Chicago

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

Authority	Program	EPA Region	Certification ID	Expiration Date
Illinois	NELAP	5	100201	04-30-16

The following analytes are included in this report, but certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
8260B		Water	Cyclohexane
8260B		Water	Methyl acetate
8260B		Water	Methylcyclohexane

List Source: TestAmerica Chicago

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	0.4
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments
No additional comments.

Receipt
The samples were received on 4/27/2016 4:20 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 2.8º C and 3.1º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D: The following analyte has been identified, in the reference method and/or via historical data, to be poor and/or erratic performer: Benzaldehyde. This analyte may have a %D>60% if the average %D of all the analytes in the initial calibration verification (ICV) is 30%.

Method(s) 8270D: The continuing calibration verification (CCV) analyzed in batch 500-334714 was outside the method criteria for the following analyte: Hexachlorocyclopentadiene. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

Method(s) 8270D: The continuing calibration verification (CCV) analyzed in batch 500-334925 was outside the method criteria for 8 analytes. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes is considered estimated.

Method(s) 8270D: Due to the large number of spiked analytes, there is a high probability that one or more analytes will recover outside acceptance limits. The laboratory's SOP allows for 3 analytes to recover outside criteria for this method when utilizing this list of analytes. The LCS associated with preparation batch 500-333076 and analytical batch 500-334925 had 3 analytes outside control limits: Hexachlorobutadiene, Hexachlorocyclopentadiene, and Hexachloroethane; therefore, corrective action was not performed. These results have been reported and qualified.

Method(s) 8270D: The continuing calibration verification (CCV) analyzed in batch 500-334714 was outside the method criteria for 6 analytes. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes is considered estimated.

Method(s) 8270D: The following sample required a dilution due to the nature of the sample matrix: MW-3-GW-04272016 (500-110798-1). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method(s) 8270D: The following sample was diluted to bring the concentration of target analytes within the calibration range: MW-3-GW-04272016 (500-110798-1). Elevated reporting limits (RLs) are provided.

Method(s) 8270D: Perylene-d12 (ISTD) responses fell below the QC limit for the following sample:MW-4-GW-04272016 (500-110798-2). For the associated analytes, the chromatograms and mass spectra have been evaluated. Analytes associated to this internal standard fell below the reporting limit; therefore re-extraction/re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method(s) 8081B: Tetrachloro-m-xylene surrogate recovery for the following samples were outside the upper control limit: MW-3-GW-04272016 (500-110798-1) and MW-4-GW-04272016 (500-110798-2). This sample did not contain any target analytes; therefore, re-extraction and re-analysis was not performed.

Job ID: 500-110798-1 (Continued)

Laboratory: TestAmerica Chicago (Continued)

Method(s) 8081B: The following samples required a mercury clean-up, via EPA Method 3660A, to reduce matrix interferences caused by sulfur: MW-3-GW-04272016 (500-110798-1), MW-4-GW-04272016 (500-110798-2) and MW-5-GW-04272016 (500-110798-3). The reagent lot number used was: 135581.

Method(s) 8082A: The continuing calibration verification (CCV) associated with batch 333763 recovered below and outside the control limit for PCB 1260, peak 2, with a %D of -21%. The majority of samples associated with this CCV were non-detects for the affected analytes. The samples that had hits had sample results of less than 40% D between columns and internal standard recoveries within control limits; therefore, the data have been reported. The following samples are impacted: MW-3-GW-04272016 (500-110798-1), MW-4-GW-04272016 (500-110798-2) and MW-5-GW-04272016 (500-110798-3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method(s) 6010C: The low-level CCV at line 125 in 6010C batch 500-333246 was above the method acceptance limits of 70-130% recovery for Arsenic. The sample MW-3-GW-04272016 (500-110798-1), MW-4-GW-04272016 (500-110798-2) and MW-5-GW-04272016 (500-110798-3) was bracketed. The low-level standard concentration was insignificant compared with the reported sample results and the sample results were unaffected by the bias at that level. The mid-range bracketing the data were all within the 90-110% recovery limits. The samples were non-detects for Arsenic; the data has been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Field Service / Mobile Lab
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Subcontract non-Sister
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

RE: **500-110798-1**

Pace Workorder: 18927

Dear Therese Hargraves:

Enclosed are the analytical results for sample(s) received by the laboratory on Friday, April 29, 2016. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Ruth Welsh 05/06/2016

ANALYTICAL RESULTS QUALIFIERS

Workorder: 18927 500-110798-1

DEFINITIONS/QUALIFIERS

Disclaimer : The Pennsylvania Department of Environmental Protection (PADEP) has decided to no longer recognize analyses that do not produce data for primary compliance, for NELAP accreditation. The methods affected by this decision are AM20GAx, AM21G, SW846 7199 and AM4.02. The laboratory shall continue to administer the NELAP/TNI standard requirements in the performance of these methods.

MDL	Method Detection Limit. Can be used synonymously with LOD; Limit Of Detection.
PQL	Practical Quanitation Limit. Can be used synonymously with LOQ; Limit Of Quantitation.
ND	Not detected at or above reporting limit.
DF	Dilution Factor.
S	Surrogate.
RPD	Relative Percent Difference.
% Rec	Percent Recovery.
U	Indicates the compound was analyzed for, but not detected at or above the noted concentration.
J	Estimated concentration greater than the set method detection limit (MDL) and less than the set reporting limit (PQL).
n	The laboratory does not hold NELAP/TNI accreditation for this method or analyte.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	LCS or LCSD is outside acceptance limits.
*	ISTD response or retention time outside acceptable limits
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.

GC Semi VOA

Qualifier	Qualifier Description
X	Surrogate is outside control limits

Metals

Qualifier	Qualifier Description
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

QC Association Summary

Certification Summary

Client: ARCADIS U.S., Inc.
Project/Site: Lake Calumet Cluster Site

TestAmerica Job ID: 500-110798-1

Laboratory: TestAmerica Chicago

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

Authority	Program	EPA Region	Certification ID	Expiration Date
Illinois	NELAP	5	100201	04-30-17

The following analytes are included in this report, but certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
8260B		Water	Cyclohexane
8260B		Water	Methyl acetate
8260B		Water	Methylcyclohexane
8270D	3510C	Water	1,1'-Biphenyl
8270D	3510C	Water	Atrazine
8270D	3510C	Water	Benzaldehyde
8270D	3510C	Water	Caprolactam

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.8,3.1
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

No additional comments.

Receipt
The samples were received on 4/28/2016 4:05 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 0.8º C and 1.8º C.

GC/MS VOA
Method(s) 8260B: The following samples were collected in properly preserved vials for analysis of volatile organic compounds (VOCs). However, the pH was outside the required criteria when verified by the laboratory, and corrective action was not possible: MW-1-GW-04282016 (500-110872-1), MW-13-GW-04282016 (500-110872-2), MW-12-GW-04282016 (500-110872-3), MW-11-GW-04282016 (500-110872-4) and DUP-1(04282016) (500-110872-5).

Method(s) 8260B: One surrogate recovery for the following sample was outside control limits: MW-1-GW-04282016 (500-110872-1). Evidence of matrix interference is present (basic pH); therefore,re-analysis was not performed.

Method(s) 8260B: The following samples were diluted to bring the concentration of target analytes within the calibration range: MW-13-GW-04282016 (500-110872-2), MW-12-GW-04282016 (500-110872-3), MW-11-GW-04282016 (500-110872-4) and DUP-1(04282016) (500-110872-5). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D: The following samples were diluted due to the nature of the sample matrix: MW-13-GW-04282016 (500-110872-2), MW-11-GW-04282016 (500-110872-4) and DUP-1(04282016) (500-110872-5). Elevated reporting limits (RLs) are provided.

Method(s) 8270D: The following samples were diluted due to the abundance of target and non-target analytes: MW-12-GW-04282016 (500-110872-3). Elevated reporting limits (RLs) are provided.

Method(s) 8270D: The following sample required a dilution due to the nature of the sample matrix: MW-12-GW-04282016 (500-110872-3). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method(s) 8270D: ICV 500-327993/13 was outside method criteria for 4-Chloroaniline at 62.9% (low). ICV 500-329038/13 was outside method criteria for 4-Chloroaniline at 47.7% (low) and 3-Nitroaniline at 32.7%D (low). The CCVIS's where the samples or QC ran were within limits. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.(ICV 500-327993/13) and (ICV 500-329038/13)

Method(s) 8270D: CCVIS 500-334017/2 was outside the method criteria for Benzaldehyde (38.6%D, high); 2,2'-oxybis[1-chloropropane] at 22.1%D, low); Hexachlorocyclopentadiene (58.3%D, high); 3-Nitroaniline (38.1%D, high); 4-Nitroaniline (23.8%D, high); Carbazole (32.2%D, high); and 2,4,6-Tribromophenol (31.1%D). CCVIS 500-334842/2 was outside the method criteria for Benzaldehyde (136.3%D, high); Phenol (20.6%D, high); 2-Methylphenol (37.4%D, high); N-Nitrosodi-n-propylamine (20.7%D, high); Indeno[1,2,3-cd]pyrene (24.1%D, high); and Dibenz(a,h)anthracene (31.0%D, high). CCVIS 500-334204/2 was outside the method criteria for Benzaldehyde (38.0%D, high); high); Hexachlorocyclopentadiene (41.3%D, high); 2,4-Dinitrophenol (20.5%D, high), Pentachlorophenol (29.7%D, high); and 2,4,6-Tribromophenol (22.6%D, high). CCVIS 500-334389/2 was outside the method criteria for Benzoic acid (22.4%D, high); 4-Chloroaniline (26.7%D, high); Caprolactam (31.8%D); Hexachlorocyclopentadiene (35.7%D, high); 2,4-Dinitrophenol (27.4%D, high); 4-Nitroaniline (50.9%D, high); Pentachlorophenol (21.9%D, high); and Benzidine (39.2%D, high). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Job ID: 500-110872-1 (Continued)

Laboratory: TestAmerica Chicago (Continued)

GC Semi VOA

Method(s) 8081B: Tetrachloro-m-xylene surrogate recovery for the following samples were outside control limits: MW-13-GW-04282016 (500-110872-2) and DUP-1(04282016) (500-110872-5). Evidence of matrix interference is present; therefore, re-extraction and re-analysis was not performed.

Method(s) 8081B: The following samples were diluted due to the nature of the sample matrix: MW-12-GW-04282016 (500-110872-3) and DUP-1(04282016) (500-110872-5). Elevated reporting limits (RLs) are provided.

Method(s) 8081B: DCB Decachlorobiphenyl surrogate recovery for the following samples was outside control limits: MW-12-GW-04282016 (500-110872-3) and MW-11-GW-04282016 (500-110872-4). Evidence of matrix interference is present; therefore, re-extraction and re-analysis was not performed.

Method(s) 8081B: DCB Decachlorobiphenyl (low bias) and Tetrachloro-m-xylene (high bias) surrogate recovery for the following samples were outside control limits: DUP-1(04282016) (500-110872-5). Sample was re-analyzed with similar results. Evidence of matrix interference is present; therefore, re-extraction was not performed.

Method(s) 8081B: The following samples required a mercury clean-up, via EPA Method 3660A, to reduce matrix interferences caused by sulfur: MW-1-GW-04282016 (500-110872-1), MW-13-GW-04282016 (500-110872-2), MW-12-GW-04282016 (500-110872-3), MW-11-GW-04282016 (500-110872-4) and DUP-1(04282016) (500-110872-5). The reagent lot number used was: 127762.

Method(s) 8082A: The continuing calibration verification (CCV) associated with batch 333763 recovered below and outside the control limit for PCB 1260, peak 2, with a %D of -21%. The majority of samples associated with this CCV were non-detects for the affected analytes. The samples that had hits had sample results of less than 40% D between columns and internal standard recoveries within control limits; therefore, the data have been reported. The following samples are impacted: MW-1-GW-04282016 (500-110872-1) and MW-11-GW-04282016 (500-110872-4).

Method(s) 8082A: The following samples were diluted due to the nature of the sample matrix: MW-13-GW-04282016 (500-110872-2), MW-12-GW-04282016 (500-110872-3) and DUP-1(04282016) (500-110872-5). Elevated reporting limits (RLs) are provided.

Method(s) 8082A: The following samples required a mercury clean-up, via EPA Method 3660A, to reduce matrix interferences caused by sulfur: MW-13-GW-04282016 (500-110872-2), MW-12-GW-04282016 (500-110872-3) and DUP-1(04282016) (500-110872-5). The reagent lot number used was: 127762.

Method(s) 8082A: The continuing calibration verification (CCV) associated with batch 333898 recovered below and outside the control limit for PCB 1016, peak 1 (-26.2%), and PCB 1260, peak 2 (-22.1%). The samples associated with this CCV were non-detects for the affected analytes and have an internal standard within control limits; therefore, the data have been reported. The following samples are impacted: MW-13-GW-04282016 (500-110872-2), MW-12-GW-04282016 (500-110872-3) and DUP-1(04282016) (500-110872-5).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method(s) 6010C: The low-level CCV at line 115 in 6010C batch 500-333507 was above the method acceptance limits of 70-130% recovery for Selenium. The samples MW-1-GW-04282016 (500-110872-1), MW-13-GW-04282016 (500-110872-2), MW-12-GW-04282016 (500-110872-3), MW-11-GW-04282016 (500-110872-4) and DUP-1(04282016) (500-110872-5) were bracketed. The low-level standard concentration was insignificant compared with the reported sample results and the sample results were unaffected by the bias at that level. The mid-range bracketing the data were all within the 90-110% recovery limits.

Method(s) 6010C: The low-level ICVL at line 8 in 6010C batch 500-333507 was above the method acceptance limits of 70-130% recovery for Aluminum The bracketing CCVL was within control limits. The low-level standard concentration was insignificant compared with the reported sample results and the sample results were unaffected by the bias at that level. The mid-range bracketing the data were all within the 90-110% recovery limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Job ID: 500-110872-1 (Continued)

RE: **500-110872-1**
Pace Workorder: 18926

Dear Therese Hargraves:

Enclosed are the analytical results for sample(s) received by the laboratory on Friday, April 29, 2016. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Ruth Welsh 05/06/2016

LABORATORY ACCREDITATIONS & CERTIFICATIONS

Accreditor:	Pennsylvania Department of Environmental Protection, Bureau of Laboratories
Accreditation ID:	02-00538
Scope:	NELAP Non-Potable Water and Solid & Hazardous Waste
Accreditor:	South Carolina Department of Health and Environmental Control, Office of Environmental Laboratory Certification
Accreditation ID:	89009003
Scope:	Clean Water Act (CWA); Resource Conservation and Recovery Act (RCRA)
Accreditor:	NELAP: New Jersey, Department of Environmental Protection
Accreditation ID:	PA026
Scope:	Non-Potable Water; Solid and Chemical Materials
Accreditor:	NELAP: New York, Department of Health Wadsworth Center
Accreditation ID:	11815
Scope:	Non-Potable Water; Solid and Hazardous Waste
Accreditor:	State of Connecticut, Department of Public Health, Division of Environmental Health
Accreditation ID:	PH-0263
Scope:	Clean Water Act (CWA) Resource Conservation and Recovery Act (RCRA)
Accreditor:	NELAP: Texas, Commission on Environmental Quality
Accreditation ID:	T104704453-09-TX
Scope:	Non-Potable Water
Accreditor:	State of New Hampshire
Accreditation ID:	299409
Scope:	Non-potable water
Accreditor:	State of Georgia
Accreditation ID:	Chapter 391-3-26
Scope:	As per the Georgia EPD Rules and Regulations for Commercial Laboratories, PAES is accredited by the Pennsylvania Department of Environmental Protection Bureau of Laboratories under the National Environmental Laboratory Approval Program (NELAC).

ANALYTICAL RESULTS QUALIFIERS

Workorder: 18926 500-110872-1

DEFINITIONS/QUALIFIERS

Disclaimer : The Pennsylvania Department of Environmental Protection (PADEP) has decided to no longer recognize analyses that do not produce data for primary compliance, for NELAP accreditation. The methods affected by this decision are AM20GAx, AM21G, SW846 7199 and AM4.02. The laboratory shall continue to administer the NELAP/TNI standard requirements in the performance of these methods.

MDL	Method Detection Limit. Can be used synonymously with LOD; Limit Of Detection.
PQL	Practical Quanitation Limit. Can be used synonymously with LOQ; Limit Of Quantitation.
ND	Not detected at or above reporting limit.
DF	Dilution Factor.
S	Surrogate.
RPD	Relative Percent Difference.
% Rec	Percent Recovery.
U	Indicates the compound was analyzed for, but not detected at or above the noted concentration.
J	Estimated concentration greater than the set method detection limit (MDL) and less than the set reporting limit (PQL).
n	The laboratory does not hold NELAP/TNI accreditation for this method or analyte.

SSOW#:

Lab PM: Hargraves, Therese M
E-Mail: therese.hargraves@testamericainc.com
Carrier Tracking No(s):
COC No: 500-72738.1
Page: Page 1 of 1
Job #: 500-110872-1

Analysis Requested

Preservation Codes:
A - HCL, B - NaOH, C - Zn Acetate, D - Nitric Acid, E - NaHSO4, F - MeOH, G - Amchlor, H - Ascorbic Acid, I - Ice, J - Di Water, K - EDTA, L - EDA
M - Hexane, N - None, O - AsNaO2, P - Na2O4S, Q - Na2SO3, R - Na2S2O3, S - H2SO4, T - TSP Dodecahydrate, U - Acetone, V - MCAA, W - ph 4-5, Z - other (specify)
Other:

Sample Identification - Client ID (Lab ID)	Sample Date	Sample Time	Sample Type (C=comp, G=grab)	Matrix (W=water, S=solid, O=waste/oil, BT=Tissue, A=Air)	Field Filtered Sample (Yes or No)	Perform MS/MSD (Yes or No)	SUB (Dissolved Gases - Methane, Carbon Dioxide, Oxygen and Nitrogen)	Total Number of containers	Special Instructions/Note:
			Preservation Code:						
MW-1-GW-04282016 (500-110872-1)	4/28/16	08:22 Central		Water			X	2	
MW-13-GW-04282016 (500-110872-2)	4/28/16	10:22 Central		Water			X	2	
MW-12-GW-04282016 (500-110872-3)	4/28/16	12:40 Central		Water			X	2	
MW-11-GW-04282016 (500-110872-4)	4/28/16	14:22 Central		Water			X	2	
DUP-1(04282016) (500-110872-5)	4/28/16	Central		Water			X	2	

Possible Hazard Identification
Unconfirmed

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)
☐ *Return To Client* ☐ *Disposal By Lab* ☐ *Archive For* _____ *Months*

Deliverable Requested: I, II, III, IV, Other (specify)

Special Instructions/QC Requirements:

Client Name: TA Chicago Project: 500-110872 Lab Work Order: 18926

A. Shipping/Container Information (circle appropriate response)

Courier: FedEx UPS USPS Client Other:_____ Air bill Present: Yes No

Tracking Number: 6514 8423 6385

Custody Seal on Cooler/Box Present: Yes No Seals Intact: Yes No

Cooler/Box Packing Material: Bubble Wrap Absorbent Foam Other:_____

Type of Ice: Wet Blue None Ice Intact: Yes Melted

Cooler Temperature: 2°C Radiation Screened: Yes No Chain of Custody Present: Yes No

Comments:_____

B. Laboratory Assignment/Log-in (check appropriate response)

	YES	NO	N/A	Comment Reference non-Conformance
Chain of Custody properly filled out	✓			
Chain of Custody relinquished	✓			
Sampler Name & Signature on COC		✓		
Containers intact	✓			
Were samples in separate bags	✓			
Sample container labels match COC Sample name/date and time collected	✓			
Sufficient volume provided	✓			
PAES containers used	✓			
Are containers properly preserved for the requested testing? (as labeled)	✓			
If an unknown preservation state, were containers checked? Exception: VOA's coliform			✓	If yes, see pH form.
Was volume for dissolved testing field filtered, as noted on the COC? Was volume received in a preserved container?			✓

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
X	Surrogate is outside control limits

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	LCS or LCSD is outside acceptance limits.
*	RPD of the LCS and LCSD exceeds the control limits
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
E	Result exceeded calibration range.
D	Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.

GC Semi VOA

Qualifier	Qualifier Description
X	Surrogate is outside control limits

Metals

Qualifier	Qualifier Description
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL. The data are considered valid because the absolute difference is less than the RL.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
TEQ	Toxicity Equivalent Quotient (Dioxin)

Certification Summary

Client: ARCADIS U.S., Inc.
Project/Site: Lake Calumet Cluster Site

TestAmerica Job ID: 500-110872-1

Laboratory: TestAmerica Chicago

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

Authority	Program	EPA Region	Certification ID	Expiration Date
Illinois	NELAP	5	100201	04-30-17

The following analytes are included in this report, but certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
8260B		Water	Cyclohexane
8260B		Water	Methyl acetate
8260B		Water	Methylcyclohexane
8270D	3510C	Water	1,1'-Biphenyl
8270D	3510C	Water	Atrazine
8270D	3510C	Water	Benzaldehyde
8270D	3510C	Water	Caprolactam

Creator: Sanchez, Ariel M

List Source: TestAmerica Chicago

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	0.8,1.8
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	False	Headspace larger than 1/4" in one or more vials, one vial with accpt. headspace
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments
No additional comments.

Receipt
The samples were received on 4/30/2016 7:34 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 3.1º C, 3.3º C and 3.6º C.

GC/MS VOA
Method(s) 8260B: The matrix spike (30 minutes) and matrix spike duplicate (54 minutes) for sample -6 were analyzed outside the 12 hour tune time. All spike recoveries were within limits therefore, the results have been reported.
MW-8-GW-04292016 (500-110948-6)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D: The following analytes have been identified, in the reference method and/or via historical data, to be poor and/or erratic performers: Benzaldehyde. This analyte may have a %D>60% if the average %D of all the analytes in the initial calibration verification (ICV) is 30%.

Method(s) 8270D: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for preparation batch 500-334095 and analytical batch 500-335398 recovered outside control limits for the following analyte: Benzaldehyde . This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

Method(s) 8270D: The %RPD of the laboratory control sample (LCS) and laboratory control standard duplicate (LCSD) for preparation batch 500-334095 recovered outside control limits for the following analytes: 2,4-Dimethylphenol and 4-Chloroaniline; however, %recovery was within control limits for both the LCS and LCSD. Data has been qualified and reported.

Method(s) 8270D: The continuing calibration verification (CCV) analyzed in 500-335266 was outside the method criteria for the following analyte: Benzaldehyde. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 500-335398 recovered above the upper control limit for 2,2'-oxybis[1-chloropropane]. The sample associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 500-335266 recovered above the upper control limit for 2,2'-oxybis[1-chloropropane], Dibenz(a,h)anthracene and Indeno[1,2,3-cd]pyrene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method(s) 8081B: Tetrachloro-m-xylene surrogate recovery for the following sample was outside control limits: MW-2-GW-04282016 (500-110948-1). Evidence of matrix interference is present; therefore, re-extraction and re-analysis was not performed.

Method(s) 8081B: DCB Decachlorobiphenyl surrogate recovery for the following sample was outside control limits: MW-7-GW-04292016 (500-110948-4). Evidence of matrix interference is present; therefore, re-extraction and re-analysis was not performed.

Method(s) 8082A: The DCB surrogate recovery for the following sample was outside control limits: MW-6-GW-04292016 (500-110948-3). Evidence of matrix interference is present and the TCX surrogate and internal standard were both within control limits; therefore,

Job ID: 500-110948-1 (Continued)

Laboratory: TestAmerica Chicago (Continued)

re-extraction and/or re-analysis was not performed.

Method(s) 8082A: The continuing calibration verification (CCV) associated with batch 333763 recovered below and outside the control limit for PCB 1260, peak 2, with a %D of -21%. The majority of samples associated with this CCV were non-detects for the affected analytes. The samples that had hits had sample results of less than 40% D between columns and internal standard recoveries within control limits; therefore, the data have been reported. The following samples are impacted: MW-2-GW-04282016 (500-110948-1), MW-10-GW-04292016 (500-110948-2), MW-6-GW-04292016 (500-110948-3), MW-9-GW-04292016 (500-110948-5), MW-8-GW-04292016 (500-110948-6) and DUP-2 (04292016) (500-110948-7).

Method(s) 8082A: Tetrachloro-m-xylene and DCB Decachlorobiphenyl surrogate recovery for the following samples were outside control limits: MW-7-GW-04292016 (500-110948-4). Re-extraction and re-analysis was performed with concurring results. Both sets of data have been reported.

Method(s) 8082A: The %RPD of the laboratory control sample (LCS) and laboratory control standard duplicate (LCSD) for preparation batch 500-334022 recovered outside control limits for the following analytes: PCB-1260 and PCB-1016.

Method(s) 8082A: The DCB Decachlorobiphenyl surrogate recovery for the following sample was outside acceptance limits (low biased) on the confirmation column: DUP-2 (04292016) (500-110948-7). The recovery is within acceptance limits on the other column, indicating that the extraction process was in control.

Method(s) 8082A: The continuing calibration verification (CCV) associated with batch 500-333763 recovered low and outside control limit for surrogate DCB Decachlorobiphenyl on the confirmation column (ZB-5). No further action was taken. The following samples are impacted: MW-6-GW-04292016 (500-110948-3), MW-7-GW-04292016 (500-110948-4) and DUP-2 (04292016) (500-110948-7).

Method(s) 8082A: The initial calibration verification (ICV) result for batch 500-331727 was high and outside control limit on the ZB-5 column for PCB-1260 peak 3 (20.8%). Sample results were non-detects for this analyte, and have been reported as qualified data.

Method(s) 8082A: The initial calibration verification (ICV) result for batch 500-331727 was above the upper control limit on the Rtx-Clp2 column for PCB-1016 peak 3 (21.5%), PCB-1016 peak 5 (42.5%), and PCB-1260 peak 3 (27.5%). Sample results were non-detects for these analytes, and have been reported as qualified data.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Field Service / Mobile Lab
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Method(s) SM 4500 NO3 F: Please note that the following Nitrate-Nitrite samples in batch 500-335172 have been reported as non-detects with elevated reporting limits due to the matrix of the samples: MW-6-GW-04292016 (500-110948-3), MW-7-GW-04292016 (500-110948-4) and DUP-2 (04292016) (500-110948-7).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
E	Result exceeded calibration range.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F2	MS/MSD RPD exceeds control limits

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	RPD of the LCS and LCSD exceeds the control limits
*	LCS or LCSD is outside acceptance limits.
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.

GC Semi VOA

Qualifier	Qualifier Description
X	Surrogate is outside control limits

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
V	Serial Dilution exceeds the control limits
B	Compound was found in the blank and sample.

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Comments
No additional comments.

Receipt
The samples were received on 4/30/2016 7:34 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 3.1º C, 3.3º C and 3.6º C.

Subcontract non-Sister
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Subcontract Work
Method Dissolved Gases - Methane, Carbon Dioxide, Oxygen and Nitrogen: This method was subcontracted to Pace-Pittsburgh (Microseeps). The subcontract laboratory certification is different from that of the facility issuing the final report.

RE: **500-110948-2**

Pace Workorder: 18953

Dear Therese Hargraves:

Enclosed are the analytical results for sample(s) received by the laboratory on Tuesday, May 03, 2016. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Ruth Welsh 05/10/2016

PROJECT SUMMARY

Workorder: 18953 500-110948-2

Workorder Comments

The analysis for light hydrocarbons/dissolved gases, method AM20GAx, was reported at dilution for samples 18953 (0003-0004, 0007) due to foaming during the headspace preparation/equilibration of the sample.

ANALYTICAL RESULTS QUALIFIERS

Workorder: 18953 500-110948-2

DEFINITIONS/QUALIFIERS

Disclaimer : The Pennsylvania Department of Environmental Protection (PADEP) has decided to no longer recognize analyses that do not produce data for primary compliance, for NELAP accreditation. The methods affected by this decision are AM20GAx, AM21G, SW846 7199 and AM4.02. The laboratory shall continue to administer the NELAP/TNI standard requirements in the performance of these methods.

MDL	Method Detection Limit. Can be used synonymously with LOD; Limit Of Detection.
PQL	Practical Quanitation Limit. Can be used synonymously with LOQ; Limit Of Quantitation.
ND	Not detected at or above reporting limit.
DF	Dilution Factor.
S	Surrogate.
RPD	Relative Percent Difference.
% Rec	Percent Recovery.
U	Indicates the compound was analyzed for, but not detected at or above the noted concentration.
J	Estimated concentration greater than the set method detection limit (MDL) and less than the set reporting limit (PQL).
n	The laboratory does not hold NELAP/TNI accreditation for this method or analyte.
d	The analyte concentration was determined from a dilution.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	3.1,3.3,3.6
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	False	Headspace larger than 1/4" in one or more vials, one vial with accpt. headspace
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

Lake Calumet Cluster Site

Data Usability Summary Report

Chicago, IL

Volatile Organic Compounds (VOCs), Semivolatile Organic Compounds (SVOCs), Pesticides, Polychlorinated Biphenyls, Metals, and Miscellaneous General Chemistry Analyses

SDG #s: 500-110798, 500-110872, and 500-110948

Analyses Performed By:
TestAmerica Laboratories
Chicago, IL

Report #: 25711R
Review Level: Tier III
Project: CI001805.0003.00001

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Groups (SDGs) # 500-110798, 500-110872, and 500-110948 for samples collected in association with the Lake Calumet Cluster Site in Chicago, Illinois. The review was conducted as a Tier III evaluation and included review of data package completeness. Only analytical data as reported by the laboratory were reviewed for this validation. Field documentation was not included in this review. Included with this assessment are the validation annotated sample result sheets, and chain of custody. Analyses were performed on the following samples:

SDG	Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis

12. Data Package Completeness and Compliance		X		X	

QA - Quality Assurance

ORGANIC ANALYSIS INTRODUCTION

Analyses were performed according to United States Environmental Protection Agency (USEPA) SW-846 Methods 8081B, 8082A, 8260B, and 8270D. Data were reviewed in accordance with USEPA National Functional Guidelines of October 1999.

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with USEPA National Functional Guidelines:

- Concentration (C) Qualifiers

  U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.

  B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers

  E The compound was quantitated above the calibration range.

  D Concentration is based on a diluted sample analysis.

- Validation Qualifiers

  J The compound was positively identified; however, the associated numerical value is an estimated concentration only.

  UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.

  JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.

  UB Compound considered non-detect at the listed value due to associated blank contamination.

  N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.

  R The sample results are rejected as unusable. The compound may or may not be present in the sample.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is

that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

VOLATILE ORGANIC COMPOUND (VOC) ANALYSES INCLUDING TOTAL VOLATILE PETROLEUM HYDROCARBONS (TPHG)

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8260B	Water	14 days from collection to analysis	Cool to < 6 °C; pH < 2 with HCl

All samples were analyzed within the specified holding time criteria.

2. Blank Contamination

Quality assurance (QA) blanks (i.e. laboratory method blanks, trip blanks, and equipment rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure sample storage contamination. Rinse blanks also measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a compound detected in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Target compounds were not detected above the MDL in the associated blanks; therefore detected sample results are not associated with blank contamination.

3. Mass Spectrometer Tuning

Mass spectrometer performance was acceptable and all analyses were performed within a 12-hour tune clock.

System performance and column resolution were acceptable.

4. Calibration

Satisfactory instrument calibration is established to insure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

4.1 Initial Calibration (ICV)

The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.

All target compounds associated with the initial calibration standards must exhibit a %RSD less than the control limit (15%) or a correlation coefficient greater than 0.99, and a RRF value greater than control limit (0.05).

4.2 Continuing Calibration (CCV)

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (20%) and RRF value greater than control limit (0.05).

All compounds associated with the calibrations were within the specified control limits, with the exception of the compounds presented in the following table.

Sample Location	Initial / Continuing	Compound	Criteria
SDG 500-110798 MW-3-GW-04272016 MW-4-GW-04272016 MW-5-GW-04272016	CCV %D	2-Butanone (MEK)	-21.8 %
		4-Methyl-2-Pentanone (MIBK)	-24.2 %
		Carbon Tetrachloride	+28.3 %
		Methyl acetate	-21.4 %
		Methyl N-Butyl Ketone (2-Hexanone)	-21.9 %
		Trichlorofluoromethane (CFC-11)	+28.8 %
SDG 500-110872 MW-1-GW-04282016 MW-13-GW-04282016 MW-12-GW-04282016 MW-11-GW-04282016 DUP-1(04282016)	CCV %D	Bromomethane	-38.8 %

		2-Butanone (MEK)	-22.7 %
		4-Methyl-2-Pentanone (MIBK)	-26.8 %
		Bromoform	-21.4 %
		Dichlorodifluoromethane (CFC-12)	-22.1 %
		Chlorodibromomethane	-20.3 %
		Chloromethane	-21.8 %
		Methyl N-Butyl Ketone (2-Hexanone)	-24.1 %
SDG 500-110948 MW-10-GW-04292016 MW-6-GW-04292016 MW-7-GW-04292016 MW-9-GW-04292016 MW-8-GW-04292016 DUP-2 (04292016)	CCV %D	1,2-Dibromo-3-chloropropane (DBCP)	-23.3 %
		2-Butanone (MEK)	-21.1 %
		4-Methyl-2-Pentanone (MIBK)	-20.2 %
		Bromoform	-22.1 %
		Methyl N-Butyl Ketone (2-Hexanone)	-22.0 %

The criteria used to evaluate the initial and continuing calibration are presented in the following table. In the case of a calibration deviation, the sample results are qualified.

Initial/Continuing	Criteria	Sample Result	Qualification
Initial and Continuing Calibration	RRF < 0.05	Non-detect	R
		Detect	J
	RRF < 0.01[1]	Non-detect	R
		Detect	J
	RRF > 0.05 or RRF > 0.01[1]	Non-detect	No Action
		Detect	
Initial Calibration	%RSD > 15% or a correlation coefficient < 0.99	Non-detect	UJ
		Detect	J
Continuing Calibration	%D > +20% (increase in sensitivity)	Non-detect	No Action
		Detect	J
	%D < -20% (decrease in sensitivity)	Non-detect	UJ
		Detect	J

[1] RRF of 0.01 only applies to typically poor responding compounds (e.g. ketones, 1,4-dioxane, etc.)

5. Surrogates/System Monitoring Compounds

All samples to be analyzed for organic compounds are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

Sample locations associated with surrogates exhibiting recoveries outside of the control limits are presented in the following table.

Sample Location	Surrogate	Recovery
SDG 500-110872 MW-1-GW-04282016	Dibromofluoromethane	< LL but > 10%
	1,2-Dichloroethane-d_4 Toluene-d_8 4-Bromofluorobenzene	Acceptable

The criteria used to evaluate the surrogate recoveries are presented in the following table. In the case of a surrogate deviation, the sample results are qualified as documented in the table below.

Control Limit	Sample Result	Qualification
> UL (Upper Control Limit)	Non-detect	No Action
	Detect	J
< LL (Lower Control Limit) but > 10%	Non-detect	UJ
	Detect	J
< 10%	Non-detect	R
	Detect	J

Control Limit	Sample Result	Qualification
D - Surrogates diluted below the calibration curve	Non-detect	UJ[1]
	Detect	J[1]

[1] A more concentrated analysis was not performed with surrogate compounds within the calibration range; therefore, no determination of extraction efficiency could be made.

6. Internal Standard Performance

Internal standard performance criteria insure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria requires the internal standard compounds associated with the VOC analysis exhibit area counts that are within a factor of two (i.e. 50% - 200%) of the area counts of the associated continuing calibration standard.

All internal standard area counts were within the control limits.

7. Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The spiked compounds used in the MS/MSD analysis must exhibit recoveries within the laboratory-established acceptance limits. The relative percent difference (RPD) between the MS and MSD results must be within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSDs performed on sample locations where the compound concentration detected in the parent sample exceeds the MS/MSD spiking concentration by a factor of four or greater. Sample results associated with MS/MSD exceedances where the parent samples are not site-specific are not qualified.

Sample locations MW-3-GW-04272016, MW-2-GW-04282016, and MW-8-GW-04292016 were used in the MS/MSD analyses. Sample locations associated with the MS/MSD exhibiting recoveries outside of the control limits are presented in the following table.

Sample Location	Compound	MS Recovery	MSD Recovery
SDG 500-110798 MW-3-GW-04272016	Trichlorofluoromethane (CFC-11)	> UL	Acceptable

The criteria used to evaluate the MS/MSD recoveries are presented in the following table. In the case of an MS/MSD deviation, the sample results are qualified as documented in the table below.

Control Limit	Sample Result	Qualification
> the upper control limit (UL)	Non-detect	No Action
	Detect	J
< the lower control limit (LL) but > 10%	Non-detect	UJ
	Detect	J
< 10%	Non-detect	R
	Detect	J

Control Limit	Sample Result	Qualification
Parent sample concentration > 4x the MS/MSD spike concentration.	Detect	No Action
	Non-detect	

Sample locations associated with MS/MSDs exhibiting RPDs greater than the control limit are presented in the following table.

Sample Location	Compounds
SDG 500-110948 MW-8-GW-04292016	Bromomethane Dichlorodifluoromethane (CFC-12) Chloroethane Chloromethane Methyl-tert-butylether (MTBE) Trichlorofluoromethane (CFC-11) Vinyl chloride

The criteria used to evaluate the RPD between the MS and MSD are presented in the following table. In the case of RPD deviations, the sample results are qualified as documented in the table below.

Control Limit	Sample Result	Qualification
> UL	Non-detect	UJ
	Detect	J

8. Laboratory Control Sample (LCS) Analysis

The LCS analysis is used to assess the accuracy of the analytical method independent of matrix interferences. The spiked compounds used in the LCS analysis must exhibit recoveries within the laboratory-established acceptance limits.

All compounds associated with the LCS analysis exhibited recoveries within the control limits.

9. Field Duplicate Sample Analysis

The field duplicate sample analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit of 35% for water matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to five times the reporting limit (RL), a control limit of two times the RL for water matrices is applied to the difference between the results.

Results for the field duplicate samples are summarized in the following table.

Sample ID / Duplicate ID	Compound	Sample Result	Duplicate Result	RPD
SDG 500-110872 MW-13-GW-04282016 / DUP-1(04282016)	Ethylbenzene	2500	1900	27.3 %
	Styrene (Monomer)	10 U	120	NC
	Toluene	8100	4600	55.1 %

Sample ID / Duplicate ID	Compound	Sample Result	Duplicate Result	RPD
SDG 500-110872 MW-13-GW-04282016 / DUP-1(04282016)	Total Xylenes	17000	14000	19.4 %
	cis-1,2-Dichloroethene	54	26	70.0 %
	Acetone	85	50 U	AC
	Benzene	630	450	33.3 %
	Vinyl chloride	15	7.1	AC
	1,1-Dichloroethane	52	23	77.3 %
	2-Butanone (MEK)	60	50 U	AC
	1,2-Dichlorobenzene	17	14	19.4 %
	Isopropylbenzene	97	110	12.6 %
SDG 500-110948 MW-6-GW-04292016 / DUP-2 (04292016)	Ethylbenzene	100	97	3.0 %
	1,4-Dichlorobenzene	13	13	0.0 %
	1,2-Dichloroethane	1.4	1.4	0.0 %
	4-Methyl-2-Pentanone	27	27	0.0 %
	Methylcyclohexane	1.1	1.1	0.0 %
	Toluene	160	150	6.5 %
	Total Xylenes	380	440	14.6 %
	cis-1,2-Dichloroethene	4.7	4.5	4.3 %
	Acetone	33	30	9.5 %
	Benzene	7.0	7.0	0.0 %
	Vinyl chloride	4.1	3.7	10.3 %
	1,1-Dichloroethane	0.51 J	1.0 U	AC
	2-Butanone (MEK)	14	13	7.4 %
	1,2-Dichlorobenzene	2.4	2.5	4.1 %
	Isopropylbenzene	6.7	6.6	1.5 %

The styrene, 1,1-dichloroethane, cis-1,2-dichloroethene, and toluene results for field duplicate samples MW-13-GW-04282016 and DUP-1(04282016) exhibited RPDs greater than the control limit. The styrene, 1,1-dichloroethane, cis-1,2-dichloroethene, and toluene results for MW-13-GW-04282016 and DUP-1(04282016) were therefore qualified as estimated.

10. Compound Identification

A positive identification of a target compound is made when the relative retention time (RRT) is within ±0.06 RRT units of the compound's RRT in the associated calibration standard and the mass spectrum of the compound matches the compound's mass spectrum in the associated calibration standard within the method-specified criteria.

All identified compounds met the specified criteria. Sample results associated with compounds that exhibited concentrations greater than the linear range of the instrument calibration or were reported from a dilution analysis are summarized in the following table.

Sample ID	Compound	Original Result	Diluted Result	Reported Result
MW-4-GW-04272016	Benzene	--	250	250 D

Sample ID	Compound	Original Result	Diluted Result	Reported Result

	Vinyl chloride	--	420	420 D
MW-11-GW-04282016	Total Xylenes	--	620	620 D
DUP-1(04282016)	1,1-Dichloroethane	--	23	23 D
	1,2-Dichlorobenzene	--	14	14 D
	Benzene	--	450	450 D
	cis-1,2-Dichloroethene	--	26	26 D

Sample ID	Compound	Original Result	Diluted Result	Reported Result
DUP-1(04282016)	Ethylbenzene	--	1900	1900 D
	Isopropylbenzene	--	110	110 D
	Styrene (Monomer)	--	120	120 D
	Toluene	--	4600	4600 D
	Total Xylenes	--	14000	14000 D
	Vinyl chloride	--	7.1	7.1 D
MW-2-GW-04282016	Chlorobenzene	--	660	660 D
MW-6-GW-04292016	Total Xylenes	--	380	380 D
MW-7-GW-04292016	Toluene	--	410	410 D
	Total Xylenes	--	760	760 D
DUP-2 (04292016)	Total Xylenes	--	440	440 D

Note: In the instance where both the original analysis and the diluted analysis sample results exhibited a concentration greater than and/or less than the calibration linear range of the instrument; the sample result exhibiting the greatest concentration will be reported as the final result.

Sample results associated with compounds exhibiting concentrations greater than the linear range are qualified as documented in the table below when reported as the final reported sample result.

Reported Sample Results	Qualification
Diluted sample result within calibration range	D
Diluted sample result < the calibration range	DJ
Diluted sample result > the calibration range	EDJ
Original sample result > the calibration range	EJ

11. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

SEMIVOLATILE ORGANIC COMPOUND (SVOC) ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8270D	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to < 6 °C

All samples were extracted and analyzed within the specified holding time criteria.

2. Blank Contamination

Quality assurance (QA) blanks (i.e. laboratory method blanks and equipment rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Target compounds were not detected above the MDL in the associated blanks; therefore detected sample results are not associated with blank contamination.

3. Mass Spectrometer Tuning

Mass spectrometer performance was acceptable and all analyses were performed within a 12-hour tune clock.

System performance and column resolution are acceptable.

4. Calibration

Satisfactory instrument calibration is established to insure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

4.1 Initial Calibration Verification (ICV)

The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.

All target compounds associated with the initial calibration standards must exhibit a %RSD less than the control limit (20%) or a correlation coefficient greater than 0.99 and an RRF value greater than control limit (0.05).

4.2 Continuing Calibration Verification (CCV)

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (20%) and RRF value greater than control limit (0.05).

All compounds associated with the calibrations were within the specified control limits, with the exception of the compounds presented in the following table.

Sample Location	Initial/Continuing	Compound	Criteria
SDG 500-110798 MW-3-GW-04272016 MW-4-GW-04272016 MW-5-GW-04272016	ICV %RSD	Benzaldehyde	28.9 %

SDG 500-110948 MW-9-GW-04292016	ICV %RSD	Benzaldehyde	48.4%
	CCV %D	4-Chloroaniline	+22.2 %

Sample Location	Initial/Continuing	Compound	Criteria
SDG 500-110948 MW-2-GW-04282016 MW-10-GW-04292016 MW-6-GW-04292016 MW-7-GW-04292016 MW-8-GW-04292016 DUP-2 (04292016)	CCV %D	2,2-Oxybis(1-Chloropropane)	+24.9 %
		Benzaldehyde	-95.8 %
		Dibenzo(a,h)anthracene	+22.0 %
		Indeno(1,2,3-cd)pyrene	+24.1 %

The criteria used to evaluate the initial and continuing calibration are presented in the following table. In the case of a calibration deviation, the sample results are qualified.

Initial/Continuing	Criteria	Sample Result	Qualification
Initial and Continuing Calibration	RRF < 0.05	Non-detect	R
		Detect	J
	RRF < 0.01[1]	Non-detect	R
		Detect	J
	RRF > 0.05 or RRF > 0.01[1]	Non-detect	No Action
		Detect	
Initial Calibration	%RSD > 20% or a correlation coefficient < 0.99	Non-detect	UJ
		Detect	J
Continuing Calibration	%D > 20% (increase in sensitivity)	Non-detect	No Action
		Detect	J
	%D > 20% (decrease in sensitivity)	Non-detect	UJ
		Detect	J
	%D > 90% (increase or decrease in sensitivity)	Non-detect	R
		Detect	J

[1] RRF of 0.01 only applies to typically poor responding compounds (e.g. anilines, nitrophenols, etc.)

5. Surrogates/System Monitoring Compounds

All samples to be analyzed for organic compounds are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits, and that all SVOC surrogate recoveries be greater than ten percent.

Sample locations associated with surrogates that exhibited recoveries outside of the control limits are presented in the following table.

Sample Location	Surrogate	Recovery
SDG 500-110872 MW-12-GW-04282016	All surrogates	D (diluted out)

The criteria used to evaluate the surrogate recoveries are presented in the following table. In the case of surrogate deviations, the sample results associated with the deviant fraction are qualified as documented in the table below.

Control Limit	Sample Result	Qualification
> UL	Non-detect	No Action
	Detect	J
< LL but > 10%	Non-detect	UJ
	Detect	J
< 10%	Non-detect	R
	Detect	J
D - Surrogates diluted below the calibration curve	Non-detect	UJ[1]
	Detect	J[1]

[1] A more concentrated analysis was not performed with surrogate compounds within the calibration range; therefore, no determination of extraction efficiency could be made.

6. Internal Standard Performance

The internal standard performance criteria insure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria requires the internal standard compounds associated with the SVOC analysis exhibit area counts that are not greater than two times (+100%) or less than one-half (-50%) of the area counts of the associated continuing calibration standard.

Sample locations associated with internal standards exhibiting responses outside of the control limits are presented in the following table.

Sample Location	Internal Standard	Response
SDG 500-110798 MW-4-GW-04272016	1,4-Dichlorobenzene-d_4 Naphthalene-d_8 Acenaphthene-d_{10} Phenanthrene-d_{10} Chrysene-d_{12}	Acceptable
	Perylene-d_{12}	< LL but > 25%

The criteria used to evaluate the internal standard responses are presented in the following table. In the case of an internal standard deviation, the compounds quantitated under the deviant internal standard are qualified as documented in the table below.

Control limit	Sample Result	Qualification
> the upper control limit (UL)	Non-detect	No action
	Detect	J
< the lower control limit (LL) but > 25%	Non-detect	UJ
	Detect	J

Control limit	Sample Result	Qualification
< 25%	Non-detect	R
	Detect	J

7. Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit recoveries within the laboratory-established acceptance limits. The relative percent difference (RPD) between the MS and MSD results must be within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on sample locations where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater. In instance where this is true, the data will not be qualified and the laboratory qualifier will be removed. Sample results associated with MS/MSD exceedances where the parent samples are not site-specific are not qualified.

The MS/MSD analysis was not performed on a sample location from within these SDGs.

8. Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Analysis

The LCS/LCSD analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS/LCSD analysis must exhibit recoveries and relative percent differences (RPDs) between the LCS and LCSD results within the laboratory-established acceptance limits.

Sample locations associated with LCS/LCSD analyses exhibiting recoveries outside of the control limits are presented in the following table.

Sample Location	Compound	LCS Recovery	LCSD Recovery
SDG 500-110798 MW-3-GW-04272016 MW-4-GW-04272016 MW-5-GW-04272016	Hexachloroethane Hexachloro-1,3-butadiene	< LL but > 10 %	< LL but > 10 %
	Hexachlorocyclopentadiene	< 10 %	< 10 %
SDG 500-110948 MW-2-GW-04282016 MW-10-GW-04292016 MW-6-GW-04292016 MW-7-GW-04292016 MW-9-GW-04292016 MW-8-GW-04292016 DUP-2 (04292016)	Benzaldehyde	> UL	> UL

The criteria used to evaluate the LCS recoveries are presented in the following table. In the case of any LCS deviations, the sample results are qualified as documented in the table below.

Control Limit	Sample Result	Qualification
> the upper control limit (UL)	Non-detect	No Action
	Detect	J
< the lower control limit (LL) but > 10%	Non-detect	UJ
	Detect	J
< 10%	Non-detect	R
	Detect	J

Sample locations associated with LCS/LCSDs exhibiting RPDs greater than the control limit are presented in the following table.

Sample Location	Compound
SDG 500-110948 MW-2-GW-04282016 MW-10-GW-04292016 MW-6-GW-04292016 MW-7-GW-04292016 MW-9-GW-04292016 MW-8-GW-04292016 DUP-2 (04292016)	2,4-Dimethylphenol 4-Chloroaniline

The criteria used to evaluate the RPD between the LCS and LCSD are presented in the following table. In the case of RPD deviations, the sample results are qualified as documented in the table below.

Control Limit	Sample Result	Qualification
> UL	Non-detect	UJ
	Detect	J

9. Field Duplicate Sample Analysis

The field duplicate sample analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit of 35% for water matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to five times the reporting limit (RL), a control limit of two times the RL for water matrices is applied to the difference between the results.

Results for the field duplicate samples are summarized in the following table.

Sample ID / Duplicate ID	Compound	Sample Result	Duplicate Result	RPD
SDG 500-110872 MW-13-GW-04282016 / DUP-1(04282016)	2,4-Dimethylphenol	37 J	40 J	7.8 %
	4-Methylphenol	210	280	28.6 %
	Phenol	56	84	40.0 %

	2-Methylnaphthalene	4.3 U	6.6	AC
	2-Methylphenol	20	19	5.1 %

AC Acceptable
J Estimated (result is < RL)
U Not detected

The phenol results for field duplicate samples MW-13-GW-04282016 and DUP-1(04282016) exhibited a RPD greater than the control limit. The phenol results for MW-13-GW-04282016 and DUP-1(04282016) have been qualified as estimated.

10. Compound Identification

Compounds are identified on the GC/MS by using the analytes relative retention time and ion spectra.

All identified compounds met the specified criteria. Sample results associated with compounds that exhibited concentrations greater than the linear range of the instrument calibration or were reported from a dilution analysis are summarized in the following table.

Sample ID	Compound	Original Result	Diluted Result	Reported Result
MW-3-GW-04272016	1,1-Biphenyl	--	38	38 D
	2,4-Dimethylphenol	--	280	280 D

	Naphthalene	--	16	16 D
	Phenol	--	38 J	38 JD

Note: In the instance where both the original analysis and the diluted analysis sample results exhibited a concentration greater than and/or less than the calibration linear range of the instrument; the sample result exhibiting the greatest concentration will be reported as the final result.

Sample results associated with compounds exhibiting concentrations greater than the linear range are qualified as documented in the table below when reported as the final reported sample result.

Reported Sample Results	Qualification
Diluted sample result within calibration range	D
Diluted sample result < the calibration range	DJ
Diluted sample result > the calibration range	EDJ
Original sample result > the calibration range	EJ

11. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

PESTICIDES ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to < 6 °C

All samples were extracted and analyzed within the specified holding time criteria.

2. Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Target compounds were not detected above the MDL in the associated blanks; therefore detected sample results are not associated with blank contamination.

3. System Performance

System performance and column resolution were acceptable.

4. Calibration

Satisfactory instrument calibration is established to insure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

4.1 Initial Calibration Verification (ICV)

All target analytes associated with the initial calibration standards must exhibit a relative standard deviation (RSD) less than the method-specified control limit of 20% or a correlation coefficient greater than 0.99.

4.2 Continuing Calibration Verification (CCV)

All target analytes associated with the continuing calibration standard must exhibit a percent difference (%D) less than the method-specified control limit of 15%.

All calibration criteria were within the control limits.

5. Surrogates/System Monitoring Compounds

All samples to be analyzed for organic compounds are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. The analysis requires surrogate compounds exhibit recoveries within the laboratory-established acceptance limits.

Sample locations associated with surrogates exhibiting recoveries outside of the control limits presented in the following table.

Sample Location	Surrogate	Recovery
SDG 500-110948 MW-7-GW-04292016	Tetrachloro-m-xylene (TCMX)	Acceptable (93%)
	Decachlorobiphenyl (DCB)	< 10%
SDG 500-110872 DUP-1(04282016)	Tetrachloro-m-xylene (TCMX)	> UL
	Decachlorobiphenyl (DCB)	< LL but > 10%

The criteria used to evaluate the surrogate recoveries are presented in the following table. In the case of a surrogate deviation, the sample results associated with the deviant fraction are qualified as documented in the table below.

Control Limit	Sample Result	Qualification
> the upper control limit (UL)	Non-detect	No Action
	Detect	J
< the lower control limit (LL) but > 10%	Non-detect	UJ
	Detect	J
< 10%	Non-detect	R
	Detect	J
One surrogate exhibiting recovery outside the control limits but > 10%	Non-detect	No Action
	Detect	
Surrogates diluted (D) below the calibration curve	Non-detect	J[1]
	Detect	

[1] A more concentrated analysis was not performed with surrogate compounds within the calibration range; therefore, no determination of extraction efficiency could be made.

6. Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits. The relative percent difference (RPD) between the MS/MSD recoveries must exhibit an RPD within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on sample locations where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

The MS/MSD analysis was not performed on a sample location from within these SDGs.

7. Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Analysis

The LCS/LCSD analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The spiked compounds used in the LCS/LCSD analysis must exhibit recoveries within the laboratory-established acceptance limits. The relative percent difference (RPD) between the LCS and LCSD results must be within the laboratory-established acceptance limits.

All compounds associated with the LCS/LCSD analysis exhibited recoveries within the control limits.

8. Field Duplicate Sample Analysis

The field duplicate sample analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit of 35% for water matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to five times the reporting limit (RL), a control limit of two times the RL for water matrices is applied to the difference between the results.

Results for the field duplicate samples are summarized in the following table.

Sample ID / Duplicate ID	Analyte	Sample Result	Duplicate Result	RPD
SDG 500-110872 MW-13-GW-04282016 / DUP-1(04282016)	All analytes	U	U	AC
SDG 500-110948 MW-6-GW-04292016 / DUP-2 (04292016)	All analytes	U	U	AC

AC Acceptable
U Not detected

The field duplicate samples exhibited acceptable results.

9. Analyte Identification

The retention times of all quantitated peaks must fall within the calculated retention time windows for both the primary and confirmation columns. When dual column analysis is performed the percent difference (%D) between the detected analyte results calculated on each column must be less than 40%.

All sample results exhibited acceptable %Ds between the primary and confirmation columns.

10. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

POLYCHLORINATED BIPHENYLS (PCBs) ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8082A	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to < 6 °C

All samples were extracted and analyzed within the specified holding time criteria.

2. Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Target compounds were not detected above the MDL in the associated blanks; therefore detected sample results are not associated with blank contamination.

3. System Performance

System performance and column resolution were acceptable.

4. Calibration

Satisfactory instrument calibration is established to insure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

4.1 Initial Calibration

All target analytes associated with the initial calibration standards must exhibit a relative standard deviation (RSD) less than the method-specified control limit of 20% or a correlation coefficient greater than 0.99. Multiple-point calibrations were performed for Aroclor 1016 and 1260 only. Single-point calibrations were performed for the remaining Aroclors.

4.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (15%).

All calibration criteria were within the control limits.

5. Surrogates/System Monitoring Compounds

All samples to be analyzed for organic compounds are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. The analysis requires surrogate compounds exhibit recoveries within the laboratory-established acceptance limits.

Sample locations associated with surrogates exhibiting recoveries outside of the control limits presented in the following table.

Sample Location	Surrogate	Recovery
SDG 500-110948 MW-7-GW-04292016	Tetrachloro-m-xylene (TCMX) Decachlorobiphenyl (DCB)	< LL but > 10%
MW-7-GW-04292016 (re-extraction)	Tetrachloro-m-xylene (TCMX) Decachlorobiphenyl (DCB)	< 10%

The criteria used to evaluate the surrogate recoveries are presented in the following table. In the case of a surrogate deviation, the sample results associated with the deviant fraction are qualified as documented in the table below. The initial analytical results for MW-7-GW-04292016 were retained in preference to the re-extraction results.

Control Limit	Sample Result	Qualification
> the upper control limit (UL)	Non-detect	No Action
	Detect	J
< the lower control limit (LL) but > 10%	Non-detect	UJ
	Detect	J
< 10%	Non-detect	R
	Detect	J
One surrogate exhibiting recovery outside the control limits but > 10%	Non-detect	No Action
	Detect	
Surrogates diluted below the calibration curve	Non-detect	J[1]
	Detect	

[1] A more concentrated analysis was not performed with surrogate compounds within the calibration range; therefore, no determination of extraction efficiency could be made.

6. Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits. The relative percent difference (RPD) between the MS/MSD recoveries must exhibit an RPD within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on sample locations where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

The MS/MSD analysis was not performed on a sample location within these SDGs.

7. Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Analysis

The LCS/LCSD analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The spiked compounds used in the LCS/LCSD analysis must exhibit recoveries within the laboratory-established acceptance limits. The relative percent difference (RPD) between the LCS and LCSD results must be within the laboratory-established acceptance limits.

All compounds associated with the LCS analyses exhibited recoveries within the control limits.

8. Field Duplicate Sample Analysis

The field duplicate sample analysis is used to assess the overall precision of the field sampling procedures and analytical method. The QAPP-specified control limit of 30% for water matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to five times the reporting limit (RL), a control limit of two times the RL is applied for water matrices.

The field duplicate sample analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit of 35% for water matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to five times the reporting limit (RL), a control limit of two times the RL for water matrices is applied to the difference between the results.

Results for the field duplicate samples are summarized in the following table.

Sample ID / Duplicate ID	Analyte	Sample Result	Duplicate Result	RPD
SDG 500-110872 MW-13-GW-04282016 / DUP-1(04282016)	All analytes	U	U	AC
SDG 500-110948 MW-6-GW-04292016 / DUP-2 (04292016)	Aroclor 1232	6.5	5.7	13.1 %

AC Acceptable
U Not detected

The field duplicate samples exhibited acceptable results.

9. Analyte Identification

The retention times of all quantitated peaks must fall within the calculated retention time windows for both the primary and confirmation columns. When dual column analysis is performed the RPD between the detected analyte results calculated from each column must be less than 40%. For analytes that are identified, the lower of the concentration values obtained from each column is reported.

All sample results exhibited acceptable RPDs between the primary and confirmation columns.

10. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

INORGANIC ANALYSIS INTRODUCTION

Analyses were performed according to United States Environmental Protection Agency (USEPA) SW-846 Methods 6010C, 7470A, 9034, 9038, and 9060, USEPA Method 353.2, and Standard Methods (SM) 2540D, 4500-NH3-G, 4500-NO2-B, and 4500-NO3-F. Data were reviewed in accordance with USEPA National Functional Guidelines of October 2004.

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and that it was already subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with the USEPA National Functional Guidelines:

- Concentration (C) Qualifiers

  U The analyte was analyzed for but not detected. The associated value is the analyte instrument detection limit.

  B The reported value was obtained from a reading less than the contract-required detection limit (CRDL), but greater than or equal to the instrument detection limit (IDL).

- Quantitation (Q) Qualifiers

  E The reported value is estimated due to the presence of interference.

  N Spiked sample recovery is not within the control limits.

  * Duplicate analysis is not within the control limits.

- Validation Qualifiers

  J The analyte was positively identified; however, the associated numerical value is an estimated concentration only.

  UJ The analyte was not detected above the reported sample detection limit. However, the reported limit is approximate and may or may not represent the actual limit of detection.

  UB Analyte considered non-detect at the listed value due to associated blank contamination.

  R The sample results are rejected as unusable. The analyte may or may not be present in the sample.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

METALS ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 6010C	Water	180 days from collection to analysis	Cool to < 6 °C; pH < 2 with HNO_3
SW-846 7470A	Water	28 days from collection to analysis	Cool to < 6 °C; pH < 2 with HNO_3

All samples were analyzed within the specified holding time criteria.

2. Blank Contamination

Quality assurance (QA) blanks (i.e. laboratory method blanks and equipment rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks also measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected analyte in an associated blank (common laboratory contaminant analytes are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All analytes associated with the QA blanks exhibited a concentration less than the MDL, with the exception of the analytes listed in the following table. Sample results associated with QA blank contamination that were greater than the BAL resulted in the removal of the laboratory qualifier (B) of data. Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Sample Location	Analyte	Sample Result	Qualification
SDG 500-110948 MW-10-GW-04292016 MW-6-GW-04292016 MW-7-GW-04292016 DUP-2 (04292016)	Total Selenium	Detected sample results < RL and < BAL	"UB" at the RL
SDG 500-110948 MW-6-GW-04292016 MW-7-GW-04292016 MW-8-GW-04292016 DUP-2 (04292016)	Dissolved Selenium		

RL = reporting limit

3. Calibration

Satisfactory instrument calibration is established to provide that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of

acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument's continuing performance is satisfactory.

3.1 Initial Calibration

The initial calibration must exhibit a correlation coefficient greater than 0.995. A technical review of the data applies limits to all analytes with no exceptions.

3.2 Continuing Calibration

All target analytes associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (10%).

The correct number and type of standards were analyzed. The correlation coefficient of the initial calibration was greater than 0.995 for all non-ICP analytes and all initial calibration verification standard recoveries were within the control limits.

All analytes associated with calibration standard recoveries were within the control limits, with the exception of the analytes presented in the following table.

Sample Locations	Initial / Continuing	Analytes	Standard Recovery
SDG 500-110798 MW-3-GW-04272016 MW-4-GW-04272016	CCV	Total Arsenic Dissolved Arsenic	> 110%
SDG 500-110872 MW-1-GW-04282016 MW-13-GW-04282016 MW-11-GW-04282016 DUP-1(04282016)	CCV	Total Aluminum Dissolved Aluminum Total Selenium Dissolved Selenium	> 110%
SDG 500-110872 MW-12-GW-04282016	CCV	Total Aluminum Dissolved Aluminum	> 110%

The criteria used to evaluate the initial and continuing calibration are presented in the following table. In the case of a calibration deviation, the sample results are qualified.

Analytes	Control Limit	Sample Result	Qualification
All analytes except mercury	75% to 89%	Non-detect	UJ
		Detect	J
	> 110%	Non-detect	No Action
		Detect	J
	< 75%	Non-detect	R
		Detect	J

3.3 Reporting limit (RL) Check Standard

The RL check standard serves to verify the linearity of calibration of the analysis at the RL. The RL standard is not required for the analysis of aluminum (Al), barium (Ba), calcium (Ca), iron (Fe), magnesium (Mg), sodium (Na), and potassium (K). The criteria used to evaluate the RL standard analysis are presented below in the RL standards evaluation table.

All RL standard recoveries were within the control limits.

3.4 ICP Interference Check Standard (ICS)

The ICS verifies the laboratories inter-element and background correction factors.

All ICS exhibited recoveries within the control limits.

4. Matrix Spike/Matrix Spike Duplicate (MS/MSD) and Laboratory Duplicate Sample Analysis

MS/MSD and laboratory duplicate sample data are used to assess the precision and accuracy of the analytical method.

4.1 Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analysis

All metal analytes must exhibit recoveries within the established acceptance limits of 75% to 125%. The relative percent difference (RPD) between the MS and MSD results must be no greater than the established acceptance limit of 20%. The MS/MSD control limits do not apply for MS/MSDs performed on sample locations where the analyte's concentration detected in the parent sample exceeds the MS/MSD spiking concentration by a factor of four or greater. In instance where this is true, the data will not be qualified and the laboratory qualifier will be removed. Sample results associated with MS/MSD exceedances where the parent samples are not site-specific are not qualified.

All analytes associated with the MS/MSD analyses exhibited acceptable recoveries and RPDs between the MS and MSD results.

4.2 Laboratory Duplicate Sample Analysis

The laboratory duplicate sample relative percent difference (RPD) criterion is applied when parent and duplicate sample concentrations are greater than or equal to five times the RL. A control limit of 20% for water matrices and 35% for soil matrices is applied when the criteria above is true. In the instance when the parent and/or duplicate sample concentrations are less than or equal to five times the RL, a control limit of one times the RL is applied for water matrices and two times the RL for soil matrices.

All analytes associated with the laboratory duplicate sample analyses exhibited RPDs within the control limit.

5. Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Analysis

The LCS/LCSD analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The analytes associated with the LCS/LCSD analysis must exhibit recoveries between the control limits of 80% and 120%. The relative percent difference (RPD) between the LCS and LCSD results must be no greater than the established acceptance limit of 20%.

All analytes associated with the LCS/LCSD analysis exhibited recoveries and RPDs within the control limits.

6. Serial Dilution (SD) Analysis

All metal analytes must exhibit a percent deviation within the established acceptance limit of less than or equal to 10%. The SD control limit does not apply for SDs where the analyte's concentration detected in the parent sample is less than fifty times the instrument detection limit (IDL). In the instance where this is

true, the data will not be qualified even if the percent recovery does not meet the control limits and the laboratory qualifier will be removed. Sample results associated with SD exceedances where the parent sample is not site-specific are not qualified.

Sample location MW-2-GW-04282016 was used in the serial dilution analysis in SDG 500-110948. All analytes associated with the serial dilution analyses exhibited acceptable %Ds except as presented in the following table. The laboratory flagged the total manganese serial dilution as exceeding the 10% control limit; however, the total manganese result is less than fifty times the IDL. Therefore no qualification is required for manganese.

Sample Location	Analyte	Serial Dilution (%D)
SDG 500-110948 MW-2-GW-04282016	Total Calcium	12%
	Total Iron	13%

The criteria used to evaluate the serial dilution are presented in the following table. In the case of a serial dilution deviation, the sample results are qualified as documented in the table below. The qualifications are applied to all sample results associated with this analytical batch.

Control Limit	Sample Result	Qualification
> UL	Non-detect	UJ
	Detect	J

7. Field Duplicate Sample Analysis

The field duplicate sample analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit of 35% for water matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to five times the reporting limit (RL), a control limit for water matrices of two times the RL is applied to the difference between the results.

Results for the field duplicate samples are summarized in the following table.

Sample ID / Duplicate ID	Compound	Sample Result	Duplicate Result	RPD
SDG 500-110872 MW-13-GW-04282016 / DUP-1(04282016)	Total Aluminum	0.20 U	0.066 J	AC

AC Acceptable
J Estimated (result is < RL)
U Not detected

The dissolved lead and dissolved zinc results exhibited RPDs greater than the control limit for the field duplicate samples MW-6-GW-04292016 and DUP-2 (04292016). The dissolved lead and dissolved zinc results were qualified as estimated for all sample locations in SDG 500-110948..

8. Assessment of Dissolved versus Total Results

The results for dissolved metal analytes should be less than 120% of the associated total metal result for those analytes that are at least five times the reporting limit (RL).

The calculated difference between the total and the dissolved sample results were within the control limit.

9. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

GENERAL CHEMISTRY ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation
Ammonia-N by SM 4500-NH3-G	Water	28 days from collection to analysis	Cool to < 6 °C; pH of < 2
Nitrate-N by EPA 353.2	Water	28 days from collection to analysis	Cool to < 6 °C
Nitrite-N by SM4500-NO2-B	Water	48 hours from collection to analysis	Cool to < 6 °C
Nitrate-N, Nitrite-N by SM4500-NO3-F	Water	48 hours from collection to analysis	Cool to < 6 °C; pH of < 2
Sulfate by SW-846 9038	Water	28 days from collection to analysis	Cool to < 6 °C
Sulfide by SW-846 9034	Water	7 days from collection to analysis	Cool to < 6 °C
Total Organic Carbon (TOC) by SW-846 9060	Water	28 days from collection to analysis	Cool to < 6 °C; pH of < 2
Total Suspended Solids by SM 2540-D	Water	7 days from collection to analysis	Cool to < 6 °C

All samples were analyzed within the specified holding time criteria.

2. Blank Contamination

Quality assurance (QA) blanks (i.e. laboratory method blanks and equipment rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected analyte in an associated blank (common laboratory contaminants are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All analytes associated with the QA blanks exhibited a concentration less than the MDL, with the exception of the analytes listed in the following table. Sample results associated with QA blank contamination that were greater than the BAL resulted in the removal of the laboratory qualifier (B) of data. Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Sample Locations	Analyte	Sample Result	Qualification
SDG 500-110798 MW-3-GW-04272016 MW-4-GW-04272016 MW-5-GW-04272016	Nitrite	Detected sample results < RL and < BAL	“UB” at the sample reporting limit (RL)

Sample Locations	Analyte	Sample Result	Qualification
SDG 500-110872 MW-1-GW-04282016 MW-13-GW-04282016 MW-11-GW-04282016 DUP-1(04282016)	Nitrite	Detected sample results < RL and < BAL	"UB" at the sample reporting limit (RL)

3. Calibration

Satisfactory instrument calibration is established to insure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

3.1 Initial Calibration

The initial calibration must exhibit a correlation coefficient greater than 0.995. A technical review of the data applies limits to all analytes with no exceptions.

3.2 Continuing Calibration

All target analytes associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (±10%).

All analytes associated with the initial and continuing calibrations were within the specified control limits. The correct frequency and type of standards were analyzed.

4. Matrix Spike/Matrix Spike Duplicate (MS/MSD) / Laboratory Duplicate Analyses

MS/MSD and laboratory duplicate data are used to assess the precision and accuracy of the analytical method.

4.1 MS/MSD Analysis

All analytes must exhibit recoveries within the established acceptance limits of 75% to 125%. When a MSD analysis is performed, the relative percent difference (RPD) between the MS/MSD results must be within the established acceptance limits of 20% for water matrices and 35% for soil matrices.

Note: The MS/MSD control limits do not apply for MS/MSD analyses performed on sample locations where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater. Sample results associated with MS/MSD exceedances where the parent samples are not site-specific are not qualified.

All analytes associated with the MS/MSD analyses exhibited acceptable recoveries and RPDs between the MS and MSD results.

4.2 Laboratory Duplicate Sample Analysis

The laboratory duplicate sample relative percent difference (RPD) criterion is applied when parent and duplicate sample concentrations are greater than or equal to five times the reporting limit (RL). A control limit of 20% for water matrices and 35% for soil matrices is applied when the criteria above is true. In the instance when the parent and/or duplicate sample concentrations are less than or equal to five times the

RL, a control limit of one times the RL is applied for water matrices and two times the RL for soil matrices.

The laboratory duplicate sample results exhibited RPDs within the control limit.

8. Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Analysis

The LCS/LCSD analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The spiked analytes used in the LCS/LCSD analysis must exhibit recoveries within the control limits of 80% and 120%. The relative percent difference (RPD) between the LCS and LCSD results must be within the control limit of 20%.

All analytes associated with the LCS/LCSD analyses exhibited recoveries and RPDs within the control limits.

6. Field Duplicate Sample Analysis

The field duplicate sample analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit of 35% for water matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to five times the reporting limit (RL), a control limit for water matrices of two times the RL is applied to the difference between the results.

Results for duplicate samples are summarized in the following table.

Sample ID / Duplicate ID	Analyte	Sample Result	Duplicate Result	RPD
SDG 500-110872 MW-13-GW-04282016 / DUP-1(04282016)	Nitrate-N	0.10 U	0.10 U	AC
	Total Suspended Solids (TSS)	14	26	60.0 %
	Sulfide	1.7	1.7	0.0 %
	Total Organic Carbon (TOC)	67	56	17.9 %
SDG 500-110948 MW-6-GW-04292016 / DUP-2 (04292016)	Nitrate-N	0.10 U	0.10 U	AC
	Total Suspended Solids (TSS)	17	19	11.1 %
	Sulfide	7.9	4.5	54.8 %
	Total Organic Carbon (TOC)	360	350	2.8 %

AC Acceptable
U Not detected

The TSS results for the field duplicate samples MW-13-GW-04282016 and DUP-1(04282016) exhibited a RPD greater than the control limit. The TSS results for MW-13-GW-04282016 and DUP-1(04282016) were qualified as estimated.

The sulfide results for the field duplicate samples MW-6-GW-04292016 and DUP-2 (04292016) exhibited a RPD greater than the control limit. The sulfide results for MW-6-GW-04292016 and DUP-2 (04292016) were qualified as estimated.

7. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments
No additional comments.

Receipt
The samples were received on 8/8/2016 5:45 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 2.4º C, 2.8º C and 3.1º C.

GC/MS VOA
Method(s) 8260B: The following samples were diluted due to the abundance of non-target analytes: MW-01-GW-08082016 (500-115433-1) and MW-03-GW-08082016 (500-115433-3). Elevated reporting limits (RLs) are provided.

Method(s) 8260B: One surrogate recovery for the following sample was outside control limits: MW-01-GW-08082016 (500-115433-1). Evidence of matrix interference is present (pH=9); therefore, re-analysis was not performed.

Method(s) 8260B: The following sample was collected in properly preserved vials for analysis of volatile organic compounds (VOCs). The pH however, was outside the required criteria when verified by the laboratory: MW-01-GW-08082016 (500-115433-1), MW-02-GW-08082016 (500-115433-2), MW-03-GW-08082016 (500-115433-3), MW-04-GW-08082016 (500-115433-4) and MW-05-GW-08082016 (500-115433-5). The sample was analyzed within 7 days per EPA recommendation, therefore no further corrective action was needed.

Method(s) 8260B: The initial calibration verification (ICV) result for Dichlorodifluoromethane was above the upper control limit. Sample results were non-detects, and have been reported as qualified data.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D: Perylene-d12 Internal standard (ISTD) response for the following sample was outside of acceptance limits: MW-04-GW-08082016 (500-115433-4). Analytes associated to this internal standard were non-detect; therefore, re-extraction/re-analysis was not performed.

Method(s) 8270D: The initial calibration verification (ICV) analyzed in batch 500-338103/13 was outside method criteria for the following analytes: 4-Chloroaniline and Bis(2-chloroethyl)ether. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated. MW-01-GW-08082016 (500-115433-1), MW-02-GW-08082016 (500-115433-2) and MW-05-GW-08082016 (500-115433-5)

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 500-347565 recovered above the upper control limit for Benzaldehyde, 4-Chloroaniline, 3-Nitroaniline and Indeno(1,2,3-cd)pyrene. The continuing calibration verification (CCV) associated with batch 500-347248 recovered above the upper control limit for Benzaldehyde, 3,3'-Dichlorobenzidene and Indeno(1,2,3-cd)pyrene. The continuing calibration verification (CCV) associated with batch 500-348460 recovered above the upper control limit for the surrogate 2,4,6-Tribromophenol. The samples associated with this CCV were non-detects for the affected analytes and the affected surrogate was within QC limits for the affected samples; therefore, the data have been reported. The following samples are impacted: MW-01-GW-08082016 (500-115433-1), MW-02-GW-08082016 (500-115433-2), MW-03-GW-08082016 (500-115433-3), MW-04-GW-08082016 (500-115433-4) and MW-05-GW-08082016 (500-115433-5).

Method(s) 8270D: The following samples required a dilution due to the nature of the sample matrix: MW-03-GW-08082016 (500-115433-3). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method(s) 8270D: The %RPD of the laboratory control sample (LCS) and laboratory control standard duplicate (LCSD) for preparation batch 500-347168 recovered outside control limits for the following analytes: 4-Chloroaniline and Hexachlorocyclopentadiene.

Method(s) 8270D: Due to the large number of spiked analytes, there is a high probability that one or more analytes will recover outside

Job ID: 500-115433-1 (Continued)

Laboratory: TestAmerica Chicago (Continued)

acceptance limits. The laboratory's SOP allows for 3 analytes to recover outside criteria for this method when utilizing this list of analytes. The LCS/LCSD associated with batch 347168 had 1 analyte outside control limits: Hexachlorocyclopentadiene. These results have been reported and qualified. (LCS 500-347168/2-A) and (LCSD 500-347168/3-A)

Method(s) 8270D: Due to the large number of spiked analytes, there is a high probability that one or more analytes will recover outside acceptance limits. The laboratory's SOP allows for 3 analytes to recover outside criteria for this method when utilizing this list of analytes. The LCS/LCSD associated with batch 347480 had 1 analyte outside control limits: Indeno(1,2,3-cd)pyrene and the LCSD had Carbazole outside the QC limits. These results have been reported and qualified. (LCS 500-347480/2-A) and (LCSD 500-347480/3-A)

Method(s) 8270D: The continuing calibration verification (CCV) analyzed in batch 500-347565 was outside the method criteria for the following analyte(s): 2,2'-oxybis[1-chloropropane], Bis(2-chloroethyl)ether, Hexachlorocyclopentadiene and 4-Nitrophenol. The continuing calibration verification (CCV) analyzed in batch 500-347248 was outside the method criteria for the following analyte(s): 4-Chloroaniline, Hexachlorocyclopentadiene, Pentachlorophenol and 4-Nitrophenol. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method(s) 8081B: The Tetrachloro-m-xylene surrogate recovery for the following sample was outside acceptance limits (high biased) on the primary column due to matrix interference: MW-04-GW-08082016 (500-115433-4). The recovery is within acceptance limits on the other column, indicating that the extraction process was in control.

Method(s) 8081B: The %RPD of the laboratory control sample (LCS) and laboratory control standard duplicate (LCSD) for preparation batch 500-347128 recovered outside control limits for the following analytes: alpha-BHC, delta-BHC and gamma-BHC (Lindane).

Method(s) 8081B: The continuing calibration verification (CCV) associated with batch 500-348276 recovered above the upper control limit for alpha-Chlordane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: MW-01-GW-08082016 (500-115433-1), MW-02-GW-08082016 (500-115433-2), MW-03-GW-08082016 (500-115433-3), MW-04-GW-08082016 (500-115433-4) and MW-05-GW-08082016 (500-115433-5).

Method(s) 8081B: The following samples required a mercury clean-up, via EPA Method 3660A, to reduce matrix interferences caused by sulfur: MW-01-GW-08082016 (500-115433-1), MW-02-GW-08082016 (500-115433-2), MW-03-GW-08082016 (500-115433-3), MW-04-GW-08082016 (500-115433-4) and MW-05-GW-08082016 (500-115433-5). The reagent lot number used was: 142098.

Method(s) 8082A: The following sample required a mercury clean-up, via EPA Method 3660A, to reduce matrix interferences caused by sulfur: MW-04-GW-08082016 (500-115433-4). The reagent lot number used was: 142098.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Field Service / Mobile Lab
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
X	Surrogate is outside control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	RPD of the LCS and LCSD exceeds the control limits
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
*	LCS or LCSD is outside acceptance limits.
*	ISTD response or retention time outside acceptable limits

GC Semi VOA

Qualifier	Qualifier Description
*	RPD of the LCS and LCSD exceeds the control limits
X	Surrogate is outside control limits

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Certification Summary

Client: ARCADIS U.S., Inc.
Project/Site: Lake Calumet Cluster Site

TestAmerica Job ID: 500-115433-1

Laboratory: TestAmerica Chicago

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

Authority	Program	EPA Region	Certification ID	Expiration Date
Illinois	NELAP	5	100201	04-30-17

The following analytes are included in this report, but certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
8260B		Water	Cyclohexane
8260B		Water	Methyl acetate
8260B		Water	Methylcyclohexane
8270D	3510C	Water	1,1'-Biphenyl
8270D	3510C	Water	Atrazine
8270D	3510C	Water	Benzaldehyde
8270D	3510C	Water	Caprolactam

Receipt
The samples were received on 8/8/2016 5:45 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 2.4º C, 2.8º C and 3.1º C.

Receipt Exceptions

Revised Report - Removed TA Detection Summary.

Dissolved gas vials were ordered from Pace Analytical Energy Services (formerly Microseeps) for the analysis of methane, oxygen, carbon dioxide and nitrogen and shipped to TestAmerica, and then delivered to the job site by TestAmerica. Upon shipping the collected samples back to Pace it was determined that Pace had shipped the wrong vials to TestAmerica. The correct vials should have been 40 ml vials with Benzylakonium Chloride as a preservative. Instead, the lab had shipped 40 ml vials with Trisodium Phosphate as a preservative.

Based on the recommendation of the Pace Technical Director, it was determined that analysis for methanol, oxygen and nitrogen would not be affected by the presence of trisodium phosphate, and the submitted vials could be tested for 3 out of the 4 dissolved gases. However, the trisodium phosphate would affect on the carbon dioxide result since it would lower the pH of the vial, and CO2 would be lost. TestAmerica was advised to ship an extra unopened 250 ml amber glass unpreserved sample to Pace for analysis for carbon dioxide.

Subcontract non-Sister
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

RE: **500-115433-2**

Pace Workorder: 19878

Dear Therese Hargraves:

Enclosed are the analytical results for sample(s) received by the laboratory on Wednesday, August 10, 2016. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Ruth Welsh 08/24/2016

PROJECT SUMMARY

Workorder: 19878 500-115433-2

Workorder Comments

The methane, oxygen and nitrogen analyses were performed from samples collected in trisodium phospate vials and the carbon dioxide analyses were performed from a sample collected in an unpreserved amber bottle.

The container pH for samples 19878 (0005) were measured as below the expected pH (< 10) for those samples preserved with trisodium phosphate, as assigned to PAES method AM20GAx.

On August 14 the laboratory experienced a failure of a walk in cooler. This project contained samples stored in that cooler. As soon as we became aware of the issue the samples were moved to other operational coolers. Our bottles and preservation techniques are the primary mode of protecting sample integrity and temperature is a secondary line of protection. Based on our in lab sample preservation studies we believe there were no adverse impacts on sample results.

This report is being re-issued following corrections made to process the available results based upon the before mentioned container preservation designations; 08/24/2016.

ANALYTICAL RESULTS QUALIFIERS

Workorder: 19878 500-115433-2

DEFINITIONS/QUALIFIERS

MDL	Method Detection Limit. Can be used synonymously with LOD; Limit Of Detection.
PQL	Practical Quanitation Limit. Can be used synonymously with LOQ; Limit Of Quantitation.
ND	Not detected at or above reporting limit.
DF	Dilution Factor.
S	Surrogate.
RPD	Relative Percent Difference.
% Rec	Percent Recovery.
U	Indicates the compound was analyzed for, but not detected at or above the noted concentration.
J	Estimated concentration greater than the set method detection limit (MDL) and less than the set reporting limit (PQL).
n	The laboratory does not hold NELAP/TNI accreditation for this method or analyte.

Ruth and Patrick,

Based on our conference call on 8/10/16 to discuss how to analyze for the 4 dissolved gases methane, oxygen, carbon dioxide and nitrogen from the incorrectly shipped trisodium phosphate vials, it was agreed to analyze the samples in the following manner:

1. Methane, oxygen and nitrogen (3 out of 4) would be analyzed out of the 40 ml vial with trisodium phosphate vial since Patrick McLoughlin indicated that these vials would not affect these 3 gases.
2. Carbon dioxide could not be analyzed from the trisodium phosphate vials since it would lower the pH too much and CO would be lost. You recommended that TestAmerica send an unopened 250ml amber unpreserved bottle to perform the CO2 analysis from.

From looking at the raw data, it appears that methane has one time of analysis, and CO2, oxygen and nitrogen all have another time of analysis. This could not be possible if only the CO2 was analyzed from a differerit container.

Please call me first thing in the morning to discuss since you did not appear to do what we discussed in the conference call.

SHIPPING ALERT: Labor Day, Monday September 5th 2016

For the upcoming Labor Day holiday (observed Monday, September 5th) FedEx and UPS will not have scheduled service on Monday September 5th.

If you have BODs sampled August 29th, 30th or 31st, or short hold samples arriving Friday, September 2nd or on the weekend, we ask that you contact your Project Manager in advance to ensure your samples meet all holding time criteria.

We are thankful for your business and hope that you have a wonderful and safe holiday!

Please let us know if we met your expectations by rating the service you received from TestAmerica on this project by visiting our website at: Project Feedback.

No additional comments.

Receipt
The samples were received on 8/9/2016 5:55 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 6 coolers at receipt time were 2.3º C, 2.4º C, 2.7º C, 2.8º C, 3.1º C and 3.3º C.

GC/MS VOA
Method(s) 8260B: The initial calibration verification (ICV) result for Dichlorodifluoromethane was above the upper control limit. Sample results were non-detects, and have been reported as qualified data.

Method(s) 8260B: The following samples were diluted to bring the concentration of target analytes within the calibration range: MW-13-GW-08092016 (500-115474-7) and DUP-1(08092016) (500-115474-8). Elevated reporting limits (RLs) are provided.

Method(s) 8260B: The following samples were collected in properly preserved vials for analysis of volatile organic compounds (VOCs). The pH however, was outside the required criteria when verified by the laboratory: MW-06-GW-08092016 (500-115474-1), MW-07-GW-08092016 (500-115474-2) and DUP-2(08092016) (500-115474-9). The samples were analyzed within 7 days per EPA recommendation therefore no further corrective action was needed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D: The following samples were diluted due to the nature of the sample matrix: MW-06-GW-08092016 (500-115474-1), MW-07-GW-08092016 (500-115474-2), MW-13-GW-08092016 (500-115474-7), DUP-1(08092016) (500-115474-8) and DUP-2(08092016) (500-115474-9). Elevated reporting limits (RLs) are provided.

Method(s) 8270D: Perylene-d12 (ISTD6) responses fell below the QC limit for the following samples:MW-06-GW-08092016 (500-115474-1) and DUP-2(08092016) (500-115474-9). For the associated analytes, the chromatograms and mass spectra have been evaluated. Re-analysis of the sample yielded similar results and the both analysis have been reported. The results for the affected analytes should be considered estimated and have been flagged accordingly.

Method(s) 8270D: The following samples contained one acid and/or one base/neutral surrogate outside acceptance limits: MW-06-GW-08092016 (500-115474-1), MW-07-GW-08092016 (500-115474-2) and DUP-2(08092016) (500-115474-9). The laboratory's SOP allows one acid and one base/neutral surrogate to be outside acceptance limits; therefore, re-extraction was not performed. These results have been reported and qualified.

Method(s) 8270D: Due to the large number of spiked analytes, there is a high probability that one or more analytes will recover outside acceptance limits. The laboratory's SOP allows for 3 analytes to recover outside criteria for this method when utilizing this list of analytes. The LCS associated with batch 500-348028 had 1 analyte outside control limits: 4-Nitrophenol. The LCSD was in control for all analytes. (LCS 500-348028/2-A)

Method(s) 8270D: The following analyte has been identified, in the reference method and/or via historical data, to be a poor and/or erratic performer: Benzaldehyde. ICV 500-346390/13 had Benzaldehyde at 85.4%D, low. ICV 500-347575/13 had Benzaldehyde at 78.2%D, low. All other analytes were in control.(ICV 500-346390/13) and (ICV 500-347575/13)

Method(s) 8270D: CCVIS 500-347729/2 was outside the method criteria for Benzaldehyde (38.6%D, low); N-Nitrosodi-n-propylamine (29.7%D, low); Acetophenone (25.2%D, low); Hexachlorocyclopentadiene (25.9%D, low); Pentachlorophenol (21.0%D, low); and Indeno]1,2,3-cd]pyrene (24.6%D, high). CCVIS 500-347999/2 was outside the method criteria for Benzaldehyde (38.4%D, low); 2-Methylphenol (25.1%D, low); N-Nitrosodi-n-propylamine (24.1%D, low); Acetophenone (22.0%D, low); Hexachlorocyclopentadiene (30.2%D, low); Pentachlorophenol (22.1%D, low); and Indeno]1,2,3-cd]pyrene (26.5%D, high). CCVIS 500-348088/2 was outside the method criteria for Benzaldehyde (29.1%D, high) and 2,4,5-Trichlorophenol (22.1%D, high). A CCV standard at or below the reporting

Job ID: 500-115474-1 (Continued)

Laboratory: TestAmerica Chicago (Continued)

limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes is considered estimated.(CCVIS 500-347729/2), (CCVIS 500-347999/2) and (CCVIS 500-348088/2)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method(s) 8082A: The initial calibration verification (ICV) result for batch 347013 was above the upper control limit for AR1660 peak3 on the ZB CLP2 column. Sample results were non-detects, and have been reported as qualified data.

Method(s) 8082A: The initial calibration verification (ICV) result for batch 347013 was above the upper control limit on the ZB-5 column. No further action was taken.

Method(s) 8082A: The following samples required a mercury clean-up, via EPA Method 3660A, to reduce matrix interferences caused by sulfur: MW-06-GW-08092016 (500-115474-1), MW-10-GW-08092016 (500-115474-5), MW-13-GW-08092016 (500-115474-7), DUP-1(08092016) (500-115474-8) and DUP-2(08092016) (500-115474-9). The reagent lot number used was: 142098.

Method(s) 8081B: The following samples were diluted due to the nature of the sample matrix: MW-07-GW-08092016 (500-115474-2), MW-13-GW-08092016 (500-115474-7), DUP-1(08092016) (500-115474-8) and DUP-2(08092016) (500-115474-9). Elevated reporting limits (RLs) are provided.

Method(s) 8081B: Tetrachloro-m-xylene surrogate recovery for the following samples were outside the upper control limit: MW-13-GW-08092016 (500-115474-7) and DUP-1(08092016) (500-115474-8). This sample did not contain any target analytes; therefore, re-extraction and re-analysis was not performed.

Method(s) 8081B: DCB Decachlorobiphenyl surrogate recovery for the following samples were outside control limits: MW-06-GW-08092016 (500-115474-1), MW-07-GW-08092016 (500-115474-2) and DUP-2(08092016) (500-115474-9). Evidence of matrix interference is present; therefore, re-extraction and re-analysis was not performed. Also, Tetrachloro-m-xylene was in control.

Method(s) 608, 8081B: The following samples required a mercury clean-up, via EPA Method 3660A, to reduce matrix interferences caused by sulfur: MW-06-GW-08092016 (500-115474-1), MW-07-GW-08092016 (500-115474-2), MW-08-GW-08092016 (500-115474-3), MW-09-GW-08092016 (500-115474-4), MW-10-GW-08092016 (500-115474-5), MW-11-GW-08092016 (500-115474-6), MW-13-GW-08092016 (500-115474-7), DUP-1(08092016) (500-115474-8) and DUP-2(08092016) (500-115474-9). The reagent lot number used was: 142098.

Method(s) 8082A: The continuing calibration verification (CCV) associated with batch 500-347806 recovered above the upper control limit for PCB-1016, PCB-1260 and DCB Decachlorobiphenyl. The sample associated with this CCV was non-detect for the affected analytes; therefore, the data have been reported.

Method(s) 8082A: DCB Decachlorobiphenyl surrogate recovery for the following samples were outside control limits: MW-06-GW-08092016 (500-115474-1) and DUP-2(08092016) (500-115474-9). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method(s) 8082A: DCB Decachlorobiphenyl and/or Tetrachloro-m-xylene surrogate recovery for the following sample was outside control limits: MW-07-GW-08092016 (500-115474-2). Re-extraction (RE) and re-analysis was performed with concurring results. Both sets of data have been reported.

Method(s) 8082A: The %RPD between the primary and confirmation column exceeded 40% for PCB-1242 for the following sample: MW-07-GW-08092016 (500-115474-2). The higher value has been reported and qualified in accordance with the laboratory's SOP.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method(s) 6010C: The continuing calibration blank (CCB) contained Cadmium, Selenium, and Thallium above the reporting limit (RL). The sample DUP-2(08092016) (500-115474-9) associated with this CCB did not contain the target compound; therefore, re-analysis of

Job ID: 500-115474-1 (Continued)

Laboratory: TestAmerica Chicago (Continued)

samples was not performed.

Method(s) 6010C: The low-level CCV at line 8 in 6010C batch 500-347665 was above the method acceptance limits of 70-130% recovery for Lead. The sample DUP-2(08092016) (500-115474-9) was bracketed. A low level standard (MRL) at the reporting limit was run prior to the samples was within control limits. The mid-range bracketing the data were all within the 90-110% recovery limits. The sample was reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method(s) 9060A: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for TOC batch 348022 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) SM 4500 NO2 B: Due to their matrices, the following samples in Nitrite batch 347287 were diluted and the results were reported with an elevated reporting limit: MW-06-GW-08092016 (500-115474-1), MW-07-GW-08092016 (500-115474-2), MW-11-GW-08092016 (500-115474-6) and DUP-2(08092016) (500-115474-9).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
*	ISTD response or retention time outside acceptable limits
X	Surrogate is outside control limits
*	LCS or LCSD is outside acceptance limits.

GC Semi VOA

Qualifier	Qualifier Description
X	Surrogate is outside control limits

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL. The data are considered valid because the absolute difference is less than the RL.
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL. The data are considered valid because the absolute difference is less than the RL.
HF	Field parameter with a holding time of 15 minutes. Test performed by laboratory at client's request.
F1	MS and/or MSD Recovery is outside acceptance limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Certification Summary

Client: ARCADIS U.S., Inc.
Project/Site: Lake Calumet Cluster Site

TestAmerica Job ID: 500-115474-1

Laboratory: TestAmerica Chicago

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

Authority	Program	EPA Region	Certification ID	Expiration Date
Illinois	NELAP	5	100201	04-30-17

The following analytes are included in this report, but certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
8260B		Water	Cyclohexane
8260B		Water	Methyl acetate
8260B		Water	Methylcyclohexane
8270D	3510C	Water	1,1'-Biphenyl
8270D	3510C	Water	Atrazine
8270D	3510C	Water	Benzaldehyde
8270D	3510C	Water	Caprolactam

Receipt
The samples were received on 8/9/2016 5:55 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 6 coolers at receipt time were 2.3º C, 2.4º C, 2.7º C, 2.8º C, 3.1º C and 3.3º C.

Receipt Exceptions

Revised Report - Removed TA Detection Summary.

Dissolved gas vials were ordered from Pace Analytical Energy Services (formerly Microseeps) for the analysis of methane, oxygen, carbon dioxide and nitrogen and shipped to TestAmerica, and then delivered to the job site by TestAmerica. Upon shipping the collected samples back to Pace it was determined that Pace had shipped the wrong vials to TestAmerica. The correct vials should have been 40 ml vials with Benzylakonium Chloride as a preservative. Instead, the lab had shipped 40 ml vials with Trisodium Phosphate as a preservative.

Based on the recommendation of the Pace Technical Director, it was determined that analysis for methanol, oxygen and nitrogen would not be affected by the presence of trisodium phosphate, and the submitted vials could be tested for 3 out of the 4 dissolved gases. However, the trisodium phosphate would affect on the carbon dioxide result since it would lower the pH of the vial, and CO2 would be lost. TestAmerica was advised to ship an extra unopened 250 ml amber glass unpreserved sample to Pace for analysis for carbon dioxide.

Subcontract non-Sister
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Pace Workorder: 19879

Dear Therese Hargraves:

Enclosed are the analytical results for sample(s) received by the laboratory on Thursday, August 11, 2016. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Ruth Welsh 08/24/2016

PROJECT SUMMARY

Workorder: 19879 500-115474-1

Workorder Comments

The methane, oxygen and nitrogen analyses were performed from samples collected in trisodium phospate vials and the carbon dioxide analyses were performed from a sample collected in an unpreserved amber bottle.

On August 14 the laboratory experienced a failure of a walk in cooler. This project contained samples stored in that cooler. As soon as we became aware of the issue the samples were moved to other operational coolers. Our bottles and preservation techniques are the primary mode of protecting sample integrity and temperature is a secondary line of protection. Based on our in lab sample preservation studies we believe there were no adverse impacts on sample results.

The container pH for samples 19879 (0001-0002, 0004) were measured as below the expected pH (< 10) for those samples preserved with trisodium phosphate, as assigned to PAES method AM20GAx.

This report is being re-issued following corrections made to process the available results based upon the before mentioned container preservation designations; 08/24/2016.

Sample Comments

Lab ID: 198790002 **Sample ID:** MW-07-GW-08092016 **Sample Type:** N

The analysis for dissolved gases, method AM20GAx, was reported at dilution due to foaming during the headspace preparation/equilibration of the sample.

ANALYTICAL RESULTS QUALIFIERS

Workorder: 19879 500-115474-1

DEFINITIONS/QUALIFIERS

MDL	Method Detection Limit. Can be used synonymously with LOD; Limit Of Detection.
PQL	Practical Quanitation Limit. Can be used synonymously with LOQ; Limit Of Quantitation.
ND	Not detected at or above reporting limit.
DF	Dilution Factor.
S	Surrogate.
RPD	Relative Percent Difference.
% Rec	Percent Recovery.
U	Indicates the compound was analyzed for, but not detected at or above the noted concentration.
J	Estimated concentration greater than the set method detection limit (MDL) and less than the set reporting limit (PQL).
n	The laboratory does not hold NELAP/TNI accreditation for this method or analyte.
d	The analyte concentration was determined from a dilution.

Ruth and Patrick,

Based on our conference call on 8/10/16 to discuss how to analyze for the 4 dissolved gases methane, oxygen, carbon dioxide and nitrogen from the incorrectly shipped trisodium phosphate vials, it was agreed to analyze the samples in the following manner:

1. Methane, oxygen and nitrogen (3 out of 4) would be analyzed out of the 40 ml vial with trisodium phosphate vial since Patrick McLoughlin indicated that these vials would not affect these 3 gases.
2. Carbon dioxide could not be analyzed from the trisodium phosphate vials since it would lower the pH too much and CO would be lost. You recommended that TestAmerica send an unopened 250ml amber unpreserved bottle to perform the CO2 analysis from.

From looking at the raw data, it appears that methane has one time of analysis, and CO2, oxygen and nitrogen all have another time of analysis. This could not be possible if only the CO2 was analyzed from a different container.

Please call me first thing in the morning to discuss since you did not appear to do what we discussed in the conference call.

SHIPPING ALERT: Labor Day, Monday September 5th 2016

For the upcoming Labor Day holiday (observed Monday, September 5th) FedEx and UPS will not have scheduled service on Monday September 5th.

If you have BODs sampled August 29th, 30th or 31st, or short hold samples arriving Friday, September 2nd or on the weekend, we ask that you contact your Project Manager in advance to ensure your samples meet all holding time criteria.

We are thankful for your business and hope that you have a wonderful and safe holiday!

Please let us know if we met your expectations by rating the service you received from TestAmerica on this project by visiting our website at: Project Feedback.

THERESE HARGRAVES
Project Manager

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.3,2.8,3.1,2.4,2.7,3.3
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

Lake Calumet Cluster Site

DATA REVIEW

Chicago, Illinois

Volatile, Dissolved Gases, Semivolatile, Pesticides, PCBs,

Metals and General Chemistry Analyses

SDG #500-115433-1 and 500-115433-2 (rev2)

Analyses Performed by:
TestAmerica Laboratories, Inc.
Chicago, Illinois

Report #26234
Review Level: Tier III
Project: CI001805.0002.00005

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Groups (SDGs) #500-115433-1 and 50-115433-2 (rev 2) for samples collected in association with the Lake Calumet Cluster Site. The review was conducted as a Tier III evaluation and included review of data package completeness. Only analytical data associated with constituents of concern were reviewed for this validation. Field documentation was not included in this review. Included with this assessment are the validation annotated sample result sheets, and chain of custody. Analyses were performed on the following samples:

Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis				
					VOC/ DISS GASES	SVOC	PEST/ PCB	MET	MISC
MW-01-GW-08082016	500-115433-1	Water	08/08/2016		X	X	X	X	X
MW-02-GW-08082016	500-115433-2	Water	08/08/2016		X	X	X	X	X
MW-03-GW-08082016	500-115433-3	Water	08/08/2016		X	X	X	X	X
MW-04-GW-08082016	500-115433-4	Water	08/08/2016		X	X	X	X	X
MW-05-GW-08082016	500-115433-5	Water	08/08/2016		X	X	X	X	X

Notes:

1. MISC-Miscellaneous parameters: Sulfate, Sulfide, Total organic carbon (TOC), Total suspended solids (TSS), Ammonia, Nitrogen/Nitrite, Nitrogen/Nitrate and Nitrogen, Nitrate-Nitrite.

2. Dissolved gases analysis was sub-contracted out to Pace/Microseeps, located in Pittsburg, Pennsylvania (SDG number 19878).

3. Dissolved gas vials received form Pace/Microseeps for the analysis of methane, oxygen, carbon dioxide and nitrogen were determined TestAmerica laboratory to be the wrong vials after collection. The correct vials should have been 40 ml vials with Benzylakonium Chloride as a preservative. Instead, the lab had shipped 40 ml vials with Trisodium Phosphate as a preservative.

   Based on the recommendation of the Pace/Microseeps Technical Director, it was determined that analysis for methane, oxygen and nitrogen would not be affected by the presence of Trisodium phosphate, and the submitted vials could be tested for 3 out of the 4 dissolved gases. However, the Trisodium phosphate would have an effect on the carbon dioxide result since it would lower the pH of the vial, and CO2 would be lost. TestAmerica shipped an extra unopened 250 ml amber glass unpreserved sample to Pace/Microseeps for analysis of the carbon dioxide.

4. A matrix spike/matrix spike duplicate (MS/MSD) analysis was performed on sample location MW-05-GW-08082016 for VOC analysis; sample location MW-01-GW-08082016 for Mercury analysis; sample location MW-01-GW-08082016 for Sulfide analysis; and, sample location MW-02-GW-08082016 for sulfate analysis.

ANALYTICAL DATA PACKAGE DOCUMENTATION

The table below is the evaluation of the data package completeness.

QA - Quality Assurance

ORGANIC ANALYSIS INTRODUCTION

Analyses were performed according to United States Environmental Protection Agency (USEPA) SW-846 Methods 8260B, 8270D, 8081B, 8082A and AM20GAx (Dissolved gases). Data were reviewed in accordance with USEPA National Functional Guidelines of October 1999.

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with USEPA National Functional Guidelines:

- Concentration (C) Qualifiers

  U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.

  B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers

  E The compound was quantitated above the calibration range.

  D Concentration is based on a diluted sample analysis.

- Validation Qualifiers

  J The compound was positively identified; however, the associated numerical value is an estimated concentration only.

  UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.

  JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.

  UB Compound considered non-detect at the listed value due to associated blank contamination.

  N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.

  R The sample results are rejected.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

VOLATILE ORGANIC COMPOUND (VOC) ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8260B	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2 s.u.

Note:

s.u. Standard units

The chain of custody documents preservation of HCL was used in the VOC sample vials. However, the pH of all samples was above the required criteria of pH of 2 s.u,. However, all the samples exhibiting a pH above 2 s.u. were analyzed within the 7 days.

All samples were analyzed within the specified holding time criteria.

2. Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Compounds were not detected above the MDL in the associated blanks; therefore, detected sample results were not associated with blank contamination.

3. Mass Spectrometer Tuning

Mass spectrometer performance was acceptable and all analyses were performed within a 12-hour tune clock.

System performance and column resolution were acceptable.

4. Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

4.1 Initial Calibration

The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.

All target compounds associated with the initial calibration standards must exhibit a %RSD less than the control limit (15%) or a correlation coefficient greater than 0.99 and an RRF value greater than control limit (0.05).

4.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (20%) and RRF value greater than control limit (0.05).

All compounds associated with the calibrations were within the specified control limits.

5. Surrogates/System Monitoring Compounds

All samples to be analyzed for organic compounds are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

Sample locations associated with surrogates exhibiting recoveries outside of the control limits presented in the following table.

Sample Locations	Surrogate	Recovery
MW-01-GW-08082016	4-Bromofluorobenzene	AC
	Dibromofluoromethane	< LL but > 10%
	1,2-Dichloroethane-d4	AC
	Toluene-d8	AC

Notes:

LL Lower control limit

AC Acceptable

The criteria used to evaluate the surrogate recoveries are presented in the following table. In the case of a surrogate deviation, the sample results are qualified as documented in the table below.

Control Limit	Sample Result	Qualification
> UL	Non-detect	No Action
	Detect	J
< LL but > 10%	Non-detect	UJ
	Detect	J
< 10%	Non-detect	R
	Detect	J

Control Limit	Sample Result	Qualification
Surrogates diluted below the calibration curve due to the high concentration of a target compounds	Non-detect	UJ[1]
	Detect	J[1]

Note:

[1] A more concentrated analysis was not performed with surrogate compounds within the calibration range; therefore, no determination of extraction efficiency could be made.

6. Internal Standard Performance

Internal standard performance criteria ensure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria require the internal standard compounds associated with the VOC exhibit area counts that are not greater than two times (+100%) or less than one-half (-50%) of the area counts of the associated continuing calibration standard.

All internal standard responses were within control limits.

7. Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits. The relative percent difference (RPD) between the MS/MSD recoveries must exhibit an RPD within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on sample locations where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

The MS/MSD exhibited acceptable recoveries and RPD between the MS/MSD recoveries.

8. Laboratory Control Sample (LCS) Analysis

The LCS analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

All compounds associated with the LCS analysis exhibited recoveries within the control limits.

9. Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit of 35% for water matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of two times the RL is applied for water matrices.

A field duplicate was not collected with a sample associated with this SDG.

10. Compound Identification

Compounds are identified on the GC/MS by using the analytes relative retention time and ion spectra.

All identified compounds met the specified criteria.

Sample results associated with compound that exhibited a concentration greater than the linear range of the instrument calibration are summarized in the following table.

Sample ID	Compound	Original Analysis	Diluted Analysis	Reported Analysis
MW-02-GW-08082016	Chlorobenzene	--	450 D	62000 D
MW-04-GW-08082016	Benzene	--	510 D	97000 D

Note: In the instance where both the original analysis and the diluted analysis sample results exhibited a concentration greater than and/or less than the calibration linear range of the instrument; the sample result exhibiting the greatest concentration will be reported as the final result.

Sample results associated with compounds exhibiting concentrations greater than the linear range are qualified as documented in the table below when reported as the final reported sample result.

Reported Sample Results	Qualification
Diluted sample result within calibration range	D
Diluted sample result less than the calibration range	DJ
Diluted sample result greater than the calibration range	EDJ
Original sample result greater than the calibration range	EJ

11. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

DISSOLVED GASES ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation
AM20GAx (methane)	Water	14 days from collection to analysis	Cool to <6 °C; preserved with Trisodium phosphate (TSP) to a pH of >10 s.u.
AM20GAx (carbon dioxide, oxygen and nitrogen)			Cool to <6 °C; preserved with Benzylakonium Chloride (BAK).

Note:

s.u. Standard units

Notes:

1. According to the case narrative, dissolved gas vials received from Pace/Microseeps for the analysis of Dissolved Gases (methane, oxygen, carbon dioxide and nitrogen) were determined (by TestAmerica laboratory) to be the wrong vials after collection. The correct vials should have been 40 ml vials with Benzylakonium Chloride (BAK) as a preservative. Instead, the lab had shipped 40 ml vials with Trisodium Phosphate (TSP) as a preservative.

   Based on the recommendation of the Pace/Microseeps Technical Director, it was determined that analysis for methane, oxygen and nitrogen would not be affected by the presence of TSP, and the submitted vials could be tested for 3 out of the 4 dissolved gases. However, the TSP would have an effect on the carbon dioxide result since it would lower the pH of the vial, and CO2 would be lost. TestAmerica shipped an extra unopened 250 ml amber glass unpreserved sample to Pace/Microseeps for analysis of the carbon dioxide. Upon analysis the 250 ml amber glass sample bottles were preserved with BAK at the Pace/Microseeps laboratory.

2. Based upon the Pace/Microseeps case narrative, a walk-in cooler malfunctioned at the lab which contained all the samples containers associated with this SDG. Upon discovery of the malfunction the samples were moved to an operating walk-in cooler. A temperature of 20 °C was recorded.

The analyses that exceeded the holding are presented in the following table.

Sample Locations	Temperature	Criteria
MW-01-GW-08082016 MW-02-GW-08082016 MW-03-GW-08082016 MW-04-GW-08082016 MW-05-GW-08082016	20 °C	Cool to <6 °C
Sample	**Preservative (pH)**	**Criteria**
MW-05-GW-08082016 (methane, nitrogen and oxygen)	9	>10

Sample results associated with sample locations analyzed by analytical method SW-846 8260 were qualified, as specified in the table below. All other holding times were met.

Criteria	Qualification	
	Detected Analytes	Non-detect Analytes
Analysis completed less than two times the temperature	J	UJ
Analysis completed greater than two times temperature	J	R

2. Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Compounds were detected in the associated QA blanks; however, the associated sample results were greater than the BAL and/or were non-detect. No qualification of the sample results was required.

3. Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

3.1 Initial Calibration

The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.

All target compounds associated with the initial calibration standards must exhibit a %RSD less than the control limit (20%) or a correlation coefficient greater than 0.99 and an RRF value greater than control limit (0.05).

3.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (20%) and RRF value greater than control limit (0.05).

All compounds associated with the calibrations were within the specified control limits.

4. Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established

acceptance limits. The relative percent difference (RPD) between the MS/MSD recoveries must exhibit an RPD within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on sample locations where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

A MS/MSD was not performed on a sample location associated with this SDG.

5. Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Analysis

The LCS/LCSD analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS/LCSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

All compounds associated with the LCS/LCSD analysis exhibited recoveries within the control limits.

6. Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit of 35% for water matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of two times the RL is applied for water matrices.

A field duplicate was not collected with a sample location associated with this SDG.

7. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

SEMIVOLATILE ORGANIC COMPOUND (SVOC) ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8270D	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

2. Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Compounds were not detected above the MDL in the associated blanks; therefore, detected sample results were not associated with blank contamination.

3. Mass Spectrometer Tuning

Mass spectrometer performance was acceptable and all analyses were performed within a 12-hour tune clock.

System performance and column resolution were acceptable.

4. Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

3.3 Initial Calibration

The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.

All target compounds associated with the initial calibration standards must exhibit a %RSD less than the control limit (20%) or a correlation coefficient greater than 0.99 and an RRF value greater than control limit (0.05).

3.4 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (20%) and RRF value greater than control limit (0.05).

All compounds associated with the calibrations were within the specified control limits, with the exception of the compounds presented in the following table.

Sample Locations	Initial/Continuing	Compound	Criteria
MW-01-GW-08082016 MW-02-GW-08082016 MW-05-GW-08082016	CCV %D	Bis(2-chloroethyl)ether	-24.8%

		4-Chloroaniline	+35.5%
		Caprolactam	+32.1%
		Hexachlorocyclopentadiene	-25.7%
		3-Nitroaniline	+28.4%
		4-Nitrophenol	-23.7%
		Indeno[1,2,3-cd]pyrene	+42.6%
MW-03-GW-08082016 MW-04-GW-08082016		4-Chloroaniline	-28.5%
		Caprolactam	+23.3%
		Hexachlorocyclopentadiene	-94.4
		4-Nitrophenol	-41.7%
		Pentachlorophenol	-49.4%
		3,3'-Dichlorobenzidine	+23.5
		Indeno[1,2,3-cd]pyrene	+28.4%
	RRF	Hexachlorocyclopentadiene	0.0219

The criteria used to evaluate the initial and continuing calibration are presented in the following table. In the case of a calibration deviation, the sample results are qualified.

Initial/Continuing	Criteria	Sample Result	Qualification
Initial and Continuing Calibration	RRF <0.05	Non-detect	R
		Detect	J
	RRF <0.01[1]	Non-detect	R
		Detect	J
	RRF >0.05 or RRF >0.01[1]	Non-detect	No Action
		Detect	
Initial Calibration	%RSD > 20% or a correlation coefficient <0.99	Non-detect	UJ
		Detect	J
	%RSD >90%	Non-detect	R
		Detect	J

Initial/Continuing	Criteria	Sample Result	Qualification
Continuing Calibration	%D >20% (increase in sensitivity)	Non-detect	No Action
		Detect	J
	%D >20% (decrease in sensitivity)	Non-detect	UJ
		Detect	J
	%D >90% (increase/decrease in sensitivity)	Non-detect	R
		Detect	J

Note:

[1] RRF of 0.01 only applies to compounds which are typically poor responding compounds (i.e., ketones, 1,4-dioxane, etc.)

5. Surrogates/System Monitoring Compounds

All samples to be analyzed for organic compounds are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

All surrogate recoveries were within control limits.

6. Internal Standard Performance

Internal standard performance criteria ensure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria require the internal standard compounds associated with the SVOC exhibit area counts that are not greater than two times (+100%) or less than one-half (-50%) of the area counts of the associated continuing calibration standard.

Sample locations associated with internal standards exhibiting responses outside of the control limits are presented in the following table.

Sample Locations	Internal Standard	Response
MW-04-GW-08082016	1,4-Dichlorobenzene-d4	AC
	Naphthalene-d8	AC
	Acenaphthene-d10	AC
	Phenanthrene-d10	AC
	Chrysene-d12	AC
	Perylene-d12	< LL but > 25%

Note:

AC Acceptable

The criteria used to evaluate the internal standard responses are presented in the following table. In the case of an internal standard deviation, the compounds quantitated under the deviant internal standard are qualified as documented in the table below.

Control limit	Sample Result	Qualification
> the upper control limit (UL)	Non-detect	No action
	Detect	J
< the lower control limit (LL) but > 25%	Non-detect	UJ
	Detect	J
< 25%	Non-detect	R
	Detect	J

7. Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits. The relative percent difference (RPD) between the MS/MSD recoveries must exhibit an RPD within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on sample locations where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

A MS/MSD was not performed on a sample location associated with this SDG.

8. Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Analysis

The LCS/LCSD analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS/LCSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

Sample locations associated with LCS/LCSD analysis exhibiting recoveries outside of the control limits presented in the following table.

Sample Locations	Compound	LCS Recovery	LCSD Recovery
MW-01-GW-08082016 MW-03-GW-08082016 MW-04-GW-08082016 MW-05-GW-08082016	Hexachlorocyclopentadiene	<10%	<10%
MW-02-GW-08082016	Indeno[1,2,3-cd]pyrene	>UL	>UL
	Carbazole	AC	>UL

The criteria used to evaluate the LCS/LCSD recoveries are presented in the following table. In the case of an LCS/LCSD deviation, the sample results are qualified as documented in the table below.

Control Limit	Sample Result	Qualification
> the upper control limit (UL)	Non-detect	No Action
	Detect	J
< the lower control limit (LL) but > 10%	Non-detect	UJ
	Detect	J
< 10%	Non-detect	R
	Detect	J

Sample locations associated with LCS/LCSD recoveries exhibiting an RPD greater than of the control limit presented in the following table.

Sample Locations	Compound
MW-01-GW-08082016 MW-03-GW-08082016	4-Chloroaniline
MW-04-GW-08082016 MW-05-GW-08082016	Hexachlorocyclopentadiene

The criteria used to evaluate the RPD between the LCS/LCSD recoveries are presented in the following table. In the case of an RPD deviation, the sample results are qualified as documented in the table below.

Control Limit	Sample Result	Qualification
> UL	Non-detect	UJ
	Detect	J

9. Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit of 35% for water matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of two times the RL is applied for water matrices.

A field duplicate was not collected with a sample location associated with this SDG.

10. Compound Identification

Compounds are identified on the GC/MS by using the analytes relative retention time and ion spectra.

All identified compounds met the specified criteria.

Sample results associated with compound that exhibited a concentration greater than the linear range of the instrument calibration are summarized in the following table.

Sample ID	Compound	Original Analysis	Diluted Analysis	Reported Analysis
MW-01-GW-08082016	Naphthalene	--	120 D	120 D
	Phenol	--	62 D	62 D
MW-02-GW-08082016	2-Methylnaphthalene	--	76 D	76 D
MW-03-GW-08082016	Carbazole	--	120 D	120 D
	2,4-Dimethylphenol	--	68 D	68 D
	Phenanthrene	--	62 D	62 D
	2-Methylnaphthalene	--	330 D	330 D
	Naphthalene	--	2000 D	2000 D

Note: In the instance where both the original analysis and the diluted analysis sample results exhibited a concentration greater than and/or less than the calibration linear range of the instrument; the sample result exhibiting the greatest concentration will be reported as the final result.

Sample results associated with compounds exhibiting concentrations greater than the linear range are qualified as documented in the table below when reported as the final reported sample result.

Reported Sample Results	Qualification
Diluted sample result within calibration range	D
Diluted sample result less than the calibration range	DJ
Diluted sample result greater than the calibration range	EDJ
Original sample result greater than the calibration range	EJ

11. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

PESTICIDES ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

2. Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Compounds were not detected above the MDL in the associated blanks; therefore, detected sample results were not associated with blank contamination.

3. Mass Spectrometer Tuning

System performance and column resolution were acceptable.

4. Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

3.5 Initial Calibration

A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99 is allowed.

3.6 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (20%).

All Aroclors associated with calibrations were within the specified control limits, with the exception of the compounds presented in the following table.

Sample Locations	Initial/Continuing	Compound	Criteria
MW-01-GW-08082016 MW-02-GW-08082016 MW-03-GW-08082016 MW-04-GW-08082016 MW-05-GW-08082016	CCV %D	alpha -Chlordane	+26.7%

The criteria used to evaluate the initial and continuing calibration are presented in the following table. In the case of a calibration deviation, the sample results are qualified.

Initial/Continuing	Criteria	Sample Result	Qualification
Initial Calibration	%RSD > 20%or a correlation coefficient <0.99	Non-detect	UJ
		Detect	J
Continuing Calibration	%D >20% (increase in sensitivity)	Non-detect	No Action
		Detect	J
	%D >20% (decrease in sensitivity)	Non-detect	UJ
		Detect	J

5. Surrogates/System Monitoring Compounds

All samples to be analyzed for organic compounds are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. Pesticide analysis requires that one of the two pesticide surrogate compounds exhibit recoveries within the laboratory-established acceptance limits.

All surrogate recoveries reported from the primary column were within control limits.

6. Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits. The relative percent difference (RPD) between the MS/MSD recoveries must exhibit an RPD within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on sample locations where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

A MS/MSD was not performed on a sample location associated whit this SDG.

7. Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Analysis

The LCS analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

Sample locations associated with LCS/LCSD recoveries exhibiting an RPD greater than of the control limit presented in the following table.

Sample Locations	Compound
MW-01-GW-08082016 MW-02-GW-08082016 MW-03-GW-08082016 MW-04-GW-08082016 MW-05-GW-08082016	alpha-BHC
	delta-BHC
	gamma-BHC (Lindane)

The criteria used to evaluate the RPD between the LCS/LCSD recoveries are presented in the following table. In the case of an RPD deviation, the sample results are qualified as documented in the table below.

Control Limit	Sample Result	Qualification
> UL	Non-detect	UJ
	Detect	J

8. Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit of 35% for water matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of two times the RL is applied for water matrices.

A field duplicate was not collected with a sample location associated with this SDG.

9. Compound Identification

The retention times of all quantitated peaks must fall within the calculated retention time windows for both the primary and confirmation columns. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 40%.

Compounds were not detected in any of the sample locations.

10. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

POLYCHLORINATED BIPHENYLS (PCBs) ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8082A	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

All samples were analyzed within the specified holding time criteria.

2. Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Compounds were not detected above the MDL in the associated blanks; therefore, detected sample results were not associated with blank contamination.

3. System Performance

System performance and column resolution were acceptable.

4. Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

4.1 Initial Calibration

A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. Multiple-point calibrations were performed for Aroclor 1016 and 1260 only. Single-point calibrations were performed for the remaining Aroclors.

4.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (20%).

All calibration criteria were within the control limits.

5. Surrogates/System Monitoring Compounds

All samples to be analyzed for organic compounds are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. PCB

analysis requires that one of the two PCB surrogate compounds exhibit recoveries within the laboratory-established acceptance limits.

All surrogate recoveries reported from the primary column were within control limits.

7. Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits. The relative percent difference (RPD) between the MS/MSD recoveries must exhibit an RPD within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on sample locations where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

A MS/MSD was not performed on a sample location associated whit this SDG.

7. Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Analysis

The LCS/LCSD analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS/LCSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

All compounds associated with the LCS/LCSD analysis exhibited recoveries within the control limits.

8. Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit of 35% for water matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of two times the RL is applied for water matrices.

A field duplicate was not collected with a sample location associated with this SDG.

9. Compound Identification

The retention times of all quantitated peaks must fall within the calculated retention time windows for both the primary and confirmation columns. When dual column analysis is performed the relative percent difference (%RPD) of detected sample results must be less than 40%.

The dual column analysis exhibited an acceptable %RPD between columns.

10. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

INORGANIC ANALYSIS INTRODUCTION

Analyses were performed according to United States Environmental Protection Agency (USEPA) SW-846 Methods 6010C, 7470A and USEPA Methods 9034 (Sulfate), 9038 (Sulfide), 9060A (TOC), Standard Method (SM)2540D (TSS) and SM4500 (Ammonia, Nitrogen, Nitrite, Nitrogen Nitrate). Data were reviewed in accordance with USEPA National Functional Guidelines of July 2002

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and that it was already subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with the USEPA National Functional Guidelines:

- Concentration (C) Qualifiers
  - U The analyte was analyzed for but not detected. The associated value is the analyte instrument detection limit.
  - J The reported value was obtained from a reading less than the reporting limit (RL), but greater than or equal to the method detection limit (MDL).
- Quantitation (Q) Qualifiers
  - E The reported value is estimated due to the presence of interference.
  - N Spiked sample recovery is not within control limits.
  - * Duplicate analysis is not within control limits.
- Validation Qualifiers
  - J The analyte was positively identified; however, the associated numerical value is an estimated concentration only.
  - UJ The analyte was not detected above the reporting limit. However, the reported limit is approximate and may or may not represent the actual limit of detection.
  - UB Analyte considered non-detect at the listed value due to associated blank contamination.
  - R The sample results are rejected.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

METALS ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 6010C	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
SW-846 7470A	Water	28 days from collection to analysis	Cool to <6 °C; preserved to a pH of less than 2.

All samples were analyzed within the specified holding times.

2. Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Analytes were not detected above the MDL in the associated blanks; therefore, detected sample results were not associated with blank contamination.

3. Calibration

Satisfactory instrument calibration is established to provide that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument's continuing performance is satisfactory.

3.1 Initial Calibration and Continuing Calibration

The correct number and type of standards were analyzed. The correlation coefficient of the initial calibration was greater than 0.995 for all non-ICP analytes and all initial calibration verification standard recoveries were within control limits.

All analytes associated with calibration standard recoveries were within control limits, with the exception of the analytes presented in the following table.

Sample Locations	Initial/Continuing	Analytes	Standard Recovery
MW-05-GW-08062016	ICV	Lead (Dissolved)	118%

The criteria used to evaluate the initial and continuing calibration are presented in the following table. In the case of a calibration deviation, the sample results are qualified.

Analytes	Control Limit	Sample Result	Qualification
All analytes (except Mercury)	75% to 89%	Non-detect	UJ
		Detect	J
	111% to 125%	Non-detect	No Action
		Detect	J
	<75%	Non-detect	R
		Detect	J
	>125%	Non-detect	No Action
		Detect	J or R
	>160%	Non-detect	No Action
		Detect	R
Mercury	65% to 79%	Non-detect	UJ
		Detect	J
	121% to 135%	Non-detect	No Action
		Detect	J
	<65%	Non-detect	R
		Detect	J
	>135%	Non-detect	No Action
		Detect	R

3.2 RL Check Standard

The RL check standard serves to verify the linearity of calibration of the analysis at the reporting limit. The RL standard is not required for the analysis of aluminum (Al), barium (Ba), calcium (Ca), iron (Fe), magnesium (Mg), sodium (Na), and potassium (K). The criteria used to evaluate the RL standard analysis are presented below in the RL standards evaluation table (if applicable).

All RL standard recoveries were within control limits.

3.3 ICP Interference Control Sample (ICS)

The ICS verifies the laboratories interelement and background correction factors.

All ICS exhibited recoveries within the control limits.

4. Matrix Spike (MS)/Laboratory Duplicate Analysis

MS and laboratory duplicate data are used to assess the precision and accuracy of the analytical method.

4.1 MS Analysis

All metal analytes must exhibit a percent recovery within the established acceptance limits of 75% to 125%. The MS recovery control limits do not apply for MS performed on sample locations where the analyte's concentration detected in the parent sample exceeds the MS concentration by a factor of four or

greater. In instance where this is true, the data will not be qualified even if the percent recovery does not meet the control limits and the laboratory flag will be removed.

The MS/MSD analysis performed on sample location MW-01-GW-080816 (for Mercury) exhibited recoveries within the control limits.

A MS was not performed on a sample location associated with this SDG for Metals

4.2 Laboratory Duplicate Analysis

The laboratory duplicate relative percent difference (RPD) criterion is applied when parent and duplicate sample concentrations are greater than or equal to 5 times the RL. A control limit of 20% for water matrices and 35% for soil matrices is applied when the criteria above is true. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of one times the RL is applied for water matrices and two times the RL for soil matrices.

MS/MSD analysis was performed in replacement of the laboratory duplicate analysis (for Mercury). The MS/MSD recoveries exhibited acceptable RPD.

5. Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit of 35% for water matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of two times the RL is applied for water matrices.

A field duplicate analysis was not performed on a sample location within this SDG.

6. Laboratory Control Sample (LCS) Analysis

The LCS analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The analytes associated with the LCS analysis must exhibit a percent recovery between the control limits of 80% and 120%.

The LCS analysis exhibited recoveries within the control limits.

7. Serial Dilution

The serial dilution analysis is used to assess if a significant physical or chemical interference exists due to sample matrix. Analytes exhibiting concentrations greater than 50 times the MDL in the undiluted sample are evaluated to determine if matrix interference exists. These analytes are required to have less than a 10% difference (%D) between sample results from the undiluted (parent) sample and results associated with the same sample analyzed with a five-fold dilution.

A serial dilution analysis was not performed on a sample location associated with this SDG.

8. General Assessment – Total vs. Dissolved

When the dissolved concentration exceeded the associated total concentration, and both results were five times greater than the LOQ, then the %D between the total and dissolved concentrations must be less than 20%.

The calculated %D between the total and the dissolved sample results were within the control limit.

9. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

GENERAL CHEMISTRY ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation
Ammonia-N by SM 4500-NH3-G	Water	28 days from collection to analysis	Cool to <6 °C; preserved to a pH of less than 2.
Nitrite-N by SM4500-NO2-B		48 hours from collection to analysis	Cool to < 6 °C
Nitrate-N by SM4500-NO3 F		28 days from collection to analysis	Cool to <6 °C; preserved to a pH of less than 2.
(Nitrate/Nitrite as N) by SM4500-NO3 F		48 hours from collection to analysis	Cool to <6 °C; preserved to a pH of less than 2.
Sulfate by SW-846 9038A		28 days from collection to analysis	Cool to <6 °C.
Sulfide by SW-846 9034		7 days from collection to analysis	Cool to <6 °C.
Total Organic Carbon (TOC) by SW-846 9060A		28 days from collection to analysis	Cool to <6 °C; preserved to a pH of less than 2.
Total Suspended Solids (TSS) by SM2540 D		7 days from collection to analysis	Cool to <6 °C

All samples were analyzed within the specified holding times.

2. Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All analytes associated with the QA blanks exhibited a concentration less than the MDL, with the exception of the analytes listed in the following table. Sample results associated with QA blank contamination that were greater than the BAL resulted in the removal of the laboratory qualifier (B) of data. Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Sample Locations	Analytes	Sample Result	Qualification
MW-05-GW-08082016	Sulfate	Detected sample results <RL and <BAL	"UB" at the RL
MW-03-GW-08082016		Detected sample results >RL and <BAL	"UB" at detected sample concentration

Note:

RL Reporting limit

3. Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

The correct number and type of standards were analyzed. The correlation coefficient of the initial calibration was greater than 0.995 and all initial calibration verification standard recoveries were within control limits.

All calibration standard recoveries were within the control limit.

4. Matrix Spike (MS)/Laboratory Duplicate Analysis

MS and laboratory duplicate data are used to assess the precision and accuracy of the analytical method.

4.1 MS Analysis

All analytes must exhibit a percent recovery within the established acceptance limits of 75% to 125%. The MS recovery control limits do not apply for MS performed on sample locations where the analyte's concentration detected in the parent sample exceeds the MS concentration by a factor of four or greater. In instance where this is true, the data will not be qualified even if the percent recovery does not meet the control limits and the laboratory flag will be removed.

The MS analysis performed on sample locations MW-01-GW-08082016 (Sulfide) and MW-02-GW-08082016 (Sulfate) exhibited recoveries within the control limits.

4.2 Laboratory Duplicate Analysis

The laboratory duplicate relative percent difference (RPD) criterion is applied when parent and duplicate sample concentrations are greater than or equal to 5 times the RL. A control limit of 20% for water matrices and 35% for soil matrices is applied when the criteria above is true. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of one times the RL is applied for water matrices and two times the RL for soil matrices.

MS/MSD analysis was performed in replacement of the laboratory duplicate analysis. The MS/MSD recoveries exhibited acceptable RPD.

5. Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit of 35% for water matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of two times the RL is applied for water matrices.

Field duplicate analysis was not performed on a sample location within this SDG.

6. Laboratory Control Sample (LCS) Analysis

The LCS analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The analytes associated with the LCS analysis must exhibit a percent recovery between the control limits of 80% and 120%.

The LCS analysis exhibited recoveries within the control limits.

7. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

DATA VALIDATION CHECKLIST FOR GENERAL CHEMISTRY

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
X	Surrogate is outside control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	RPD of the LCS and LCSD exceeds the control limits
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
*	LCS or LCSD is outside acceptance limits.
D	Sample results are obtained from a dilution; the surrogate or matrix spike recoveries reported are calculated from diluted samples.
*	ISTD response or retention time outside acceptable limits

GC Semi VOA

Qualifier	Qualifier Description
*	RPD of the LCS and LCSD exceeds the control limits
X	Surrogate is outside control limits

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Client Information (Sub Contract Lab)	Sampler:	Lab PM: Hargraves, Therese M	Carrier Tracking No(s):	COC No: 500-76560.1
Client Contact: Shipping/Receiving	Phone:	E-Mail: therese.hargraves@testamericainc.com		Page: Page 1 of 1
Company: Pace Analytical Services, Inc.				Job #: 500-115433-2
Address: 220 William Pitt Way, ,	Due Date Requested: 8/18/2016			
City: Pittsburgh	TAT Requested (days):			
State, Zip: PA, 15238				
Phone: 412-826-5245(Tel)	PO #:			
Email:	WO #:			
Project Name: Lake Calumet Cluster Site	Project #: 50011099			
Site:	SSOW#:			

Analysis Requested

Preservation Codes:

A - HCL, B - NaOH, C - Zn Acetate, D - Nitric Acid, E - NaHSO4, F - MeOH, G - Amchlor, H - Ascorbic Acid, I - Ice, J - DI Water, K - EDTA, L - EDA, M - Hexane, N - None, O - AsNaO2, P - Na2O4S, Q - Na2SO3, R - Na2S2O3, S - H2SO4, T - TSP Dodecahydrate, U - Acetone, V - MCAA, W - ph 4-5, Z - other (specify)

Other:

Sample Identification - Client ID (Lab ID)	Sample Date	Sample Time	Sample Type (C=Comp, G=grab)	Matrix (W=water, S=solid, O=waste/oil, BT=Tissue, A=Air)	Field Filtered Sample (Yes or No)	Perform MS/MSD (Yes or No)	SUB (Dissolved Gases - Methane, Carbon Dioxide, Oxygen and Nitrogen)	Total Number of containers	Special Instructions/Note:
			Preservation Code:						
MW-01-GW-08082016 (500-115433-1)	8/8/16	11:00 Central		Water			X	2	
MW-02-GW-08082016 (500-115433-2)	8/8/16	13:00 Central		Water			X	2	
MW-03-GW-08082016 (500-115433-3)	8/8/16	13:30 Central		Water			X	2	
MW-04-GW-08082016 (500-115433-4)	8/8/16	15:20 Central		Water			X	2	
MW-05-GW-08082016 (500-115433-5)	8/8/16	15:40 Central		Water			X	2	

Possible Hazard Identification
Unconfirmed

1.2°C

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)
☐ *Return To Client* ☐ *Disposal By Lab* ☐ *Archive For* _____ *Months*

Deliverable Requested: I, II, III, IV, Other (specify) Primary Deliverable Rank: 2

Special Instructions/QC Requirements:

Empty Kit Relinquished by:	Date:	Time:		Method of Shipment:	
Relinquished by:	Date/Time: 08/09/16 1400	Company TA	Received by: PAS	Date/Time: 8.10.16 1100	Company
Relinquished by:	Date/Time:	Company	Received by:	Date/Time:	Company

ANALYTICAL RESULTS QUALIFIERS

Workorder: 19878 500-115433-2

DEFINITIONS/QUALIFIERS

MDL	Method Detection Limit. Can be used synonymously with LOD; Limit Of Detection.
PQL	Practical Quanitation Limit. Can be used synonymously with LOQ; Limit Of Quantitation.
ND	Not detected at or above reporting limit.
DF	Dilution Factor.
S	Surrogate.
