I talked with Fred about future plans for the Saad site. He said he is preparing an action memo right now. He is requesting $1.5 million for the remainder of the removal project. He has not heard from Alcoa or Drew Goddard since the last phase of work ended. The excavated areas have not been filled to date. He is also trying to reach Dr Crawford to get the status of the groundwater study.

Fred has estimated there is 4000 yds^3 of contaminated soil that still need to be removed. ~~Also there~~ NF ~~have also~~ He has estimated that 1200 yd^3 will come from the berm area.

Fred will be in touch soon, he said he hopes ~~to~~ to have action on the final phase in a timely manner.
