Thank you Colleen. I appreciate the help and information. I'll let you and Chuck know when I get information back from the web team; the help will be a great idea! ☺

Thanks again!

Christina

Subject: RE: Models page update

Hi Christina –

We only had the updates in that folder before, but as per our conversation, all the tools for this page should now be copied to the methomyl/carbaryl folder mentioned below (thanks for your help Chuck!).

I revisited the models cover page Word document to review it again now that it is back in track changes – I think all the updates are there. The web team may not really want it that way now as it is really busy, but we can just accept changes if they want it clean instead (if you want to look it over again, I recommend viewing with track changes turned off to see what it will look like clean).

If you have any questions at all regarding which file goes with which section/link or anything else, please don't hesitate to ask. After they set this page up, it will probably be useful for Chuck and I to help check the links and format.

Thanks!

Colleen

Subject: RE: Models page update

So everything that is needed is in the provisional models folder? That is all associated tools/files. Or are there others that they should have/we are using from before?

Subject: Models page update

Hi Christina –

The models web page and other associated files (including tools) have been updated and are located at G:\Teams and Panels\Special Teams\ESA Pilots\BE_Meth_Carb\DRAFT BEs_Final Ready for Posting\Provisional Tools. The Word document models page is cleaned up and

incorporates all updates. I had to make a few editorial changes after I accepted all the changes and I also changed the WoE section slightly to be more consistent with the other tool sections of the page.

Attachment 4-1 has also been updated and is located in the Final Attachments folder.

I think that is everything... Let me know if you have any questions.

Thanks!

Colleen
