Ex. 5 - Deliberative Process

Buckeye Egg Farm, Ohio

The company will spend more than $1.6 million to test and install innovative pollution controls to reduce air emissions of particulate matter over 1,300 tons each year and ammonia over 700 tons each year. Buckeye Egg Farm's facilities hold nearly 12 million laying hens, which produce 2.6 billion eggs, representing nearly 4 percent of the nation's eggs. The decrease in emissions for the three facilities, in Croton, Marseilles, and Mt. Victory, correlate to a reduction of 50 to 70 percent of the particulate matter and 50 percent of the ammonia. In addition to implementing these controls, which will minimize the negative impacts of these facilities on local residents, the company also paid civil penalties of nearly $900,000. If the controls do not provide sufficient emission reductions, the company will apply for all applicable federally enforceable permits.

Hi Colleen,

See below. Are you aware of the changes that he's talking about? Do you know if or when ADEQ is planning to incorporate them into the state SIP? This is related to Hickman Egg Farm.

Maeve,

Here in Arizona the Agricultural Best Management Committee made some rule changes. See below. The way the statutes/regulations are written there is no public notice or opportunity for the public to provide input and they immediately become effective. I believe the revisions to the regulations lack scientific research for BMPs; allow point sources to be regulated as non-point sources; bypass the new source review process; do not provide any limitations or oversight for trial testing, and there's more comments that I can make. I did not have the opportunity to make these comments and have them addressed in Arizona, but I'm hoping to have the opportunity when they are submitted to be included in the SIP. How can I find out when they are submitted to the EPA or how can I be notified?

Dan
