Re: Forstel Metals

195894

- bring in source mat in form of ore + process to extract uranium + thorium and use as solid waste + stored in lined pond. - talk about further processing
- looking at application for renewal.
- non-all requires EA before permit renewal.
- does contain other valuable minerals which they use.
- NRC just received approval + currently under review.
- State has authority over ponds on where they do anyway - think they are ones to authorize const. of ponds. - OK wants to handle instead of NRC + NRC is happy to throw out
- NRC just licenses possession of source material + what happens through process. In absence of other authorities they will look at everything.
