ATT00001.txt

Dear Director Pruitt,
My name is Professor Paul Schultz, I am currently on sabbatical. I taught at the university level in both undergrad and graduate levels for approximately four years. I instructed non traditional students in the real estate development and urban planning areas.
Now that you are leading our EPA how about a great start in cleaning our air by removing the daily Chemtrail spraying from aircraft? I am former US Air Force and I do know the difference in vapor from natural jet fuel contrails and the release of chemical substances from Chemtrails.
I believe Obama has used this spraying for climate change and it has, according to some sources, many harmful and cancer causing agents. It also affects our plant life for garden growing and we all, including you, are breathing it.
I can start out the day with a clear and sunny blue sky and then it appears a dozen or so aircraft start spraying and in three hours the whole sky is overcast. Many Americans know about this deceptive spraying. We are not conspiracy theorists but use factual and empirical evidence to support our claim.
I am sure you will find it hard to discover who is doing this because the chemicals have been mixed in jet fuel and additionally sprayed by both military and private C-130 type aircraft. I include a photo.
Would you please stop the Chemtrails?
Thank you for any effort.
Sincerely yours,
Professor Paul Schultz
