Good Afternoon:

How is everyone? I wanted to send information out to the group. Some of this information will go out eventually in the Pollution Report but I like to give you all an update .

Since the June 1st initiation of the removal action at the Niagara Falls Boulevard Site, I have been the EPA On-Scene Coordinator. Starting next week, I will have support from other regional OSCs. Christopher Jimenez will be overseeing the removal activities next week. In October, Carl Pellegrino will be covering some weeks moving forward through December. Their tours will be one week at a time with my 2-3 week tours in between. They are both copied to this email. This is just in case there are some activities planned at HTC and they oversee activities there.

As described in previous reports, we were requested by the Town of Lewiston to perform additional survey assessment work at the residences along Robert Street. The two homes next to the Area 5 residence (5380 Robert Street & 5382 Robert Street) are the only owners that requested the service. Today we conducted the gamma survey in both yards. Interior gamma surveys will be scheduled at later dates. Further assessment work will only be needed if we obtain elevated gamma readings on the properties. The soil results from the Area 5 residence and Robert Street should be in next week.

I stopped by the HTC office today and touched base with your admin assistant. As always, if there are any questions or public concerns, please contact me or Mike Basile.

Thanks

Regards,

Eric
