Subject: Please Respond - Availability to Discuss: PFCs - Mapping Process for Identifying Potential Sources by DW

Hi All,

As discussed at our April state-EPA administrators meeting, Jeri Weiss of the drinking water program, has been participating in a project to identify potential sources of perfluorinated compounds (PFCs) and their proximity to public drinking water systems in Region 1. The project team worked with EPA New England's Federal Facility, Pre-remedial, Drinking Water and GIS programs to complete this work. In addition they have coordinated with EPA Regions 2 and 3, as they are conducting similar assessments. The result of this project is an analysis of sources: airports, fire training facilities, industrial sources based on NAICS codes and additional St. Gobain facilities.

We would like to share our process and the results with the state drinking water programs in an interactive webinar.

Please complete the Doodle Poll by Wednesday, May 18th and let us know your availability for a one-hour webinar.

If you have any questions, please let us know.

Thanks and have a great weekend,

Denise
