General Comment

Glyphosate is a dangerous chemical that has been labeled a probable carcinogen by the World Health Organization. This chemical is contaminating everything, putting the health of all at risk. Several vaccines that contain gelatin and egg protein were recently tested for glyphosate contamination. Most of those vaccines were shown to be heavily contaminated with glyphosate! MMR contained the most glyphosate by far out of all that were tested. We cannot inject this known carcinogen into our children's bodies! Dr. Stephanie Seneff has research that clearly shows just how harmful this chemical is. It replaces the amino acid glycine in protein synthesis and causes nutritional deficiencies that lead to auto immune problems, autism, neurological problems, and cancer. It is clear that this chemical is strongly contributing to epidemic of health problems in the United States. It's also killing our bees at an alarming rate. This chemical MUST be banned immediately!
