Meeting @ Manchester Lab re: discussion of air sampling @ Hwy 36/Triangle Lake

Sampling Plan

Le ho-vol puff samplers on loan (EPA equipment)

possible 4 passive ("salad bowl") samplers

Manchester Lab would test samplers & media for the list of chemicals we want to test for.

ODEQ's passive sample can include puff material *and* resin packets in the same bowl setup, passive sampling for drift study can be installed together with the bowls

- deploy enough of them for 30 days will provide concentration gradient for "vector" information.
- staggered deployment (shorter & longer deployment times) to address loss of compounds over time
