LMS_Summary of April 5-12, 2017 ARC Activities.pdf

Excellent. Thank you! Much improved and appreciated!

We are reviewing now and will provide any additional questions/comments. A Couple initial comments:

•□□□□□□□□ On page 8 under April 10th, please clarify that: ARC determined it was unsafe to access the site and therefore….*No field activities were planned on April 8 and 9, 2017 (weekend) that would have required returning to the site on those days*"

•□□□□□□□□ On page 10 please add the surveyed pond dimensions and bank slope numbers and calculations. (as you know EPA conservative estimates 350,000 gallons without including the 2 inches of precipitation)

•□□□□□□□□ Also on page 10, please add : the pH 2.13 *water in Pond 4 at the time of this discharge would have been precipitation (snow melt and rain) and passive drainage from the seep drains that the Water Board installed south and east of the pond during initial pond construction,* for a full summary of the chemistry of the pond water refer table 3.

•□□□□□□□□ For consistency, I've copied the waterboard.

Thanks again. EPA will get back to you with any comments/questions and will be providing managers with an update for stakeholders today.
