Comment: Another issue is that Piney Creek existing use is cold water habitat. We'll change this in future rulemaking, but our rules require that existing use be protected (even if that use isn't in rule yet). So the modeling you've done will have to be for meet WQS for cold water habitat. I understand that may make a difference for some metals, e.g. cadmium, but not for TDS and sulfate. Please be prepared to address this in the modeling.
