Description of Waste Reduction Efforts During Odd-Numbered Reporting Calendar Year:	The following provides a partial list of waste minimization techniques: USEI will continue utilizing a less than 500,000 BTU heater for handling / re-use of oils from on-site equipment (heavy equipment) maintenance; USEI will continue utilizing bio-solvents in the parts washers in the maintenance department; Landfill leachate is minimized by proper solidification of liquids in waste received by USEI prior to placement in the landfill and the proper use of reagent water for stabilization of wastes requiring treatment; USEI has replaced the majority of high-mercury lamps with newer environmentally friendly low-mercury lamps manufactured by Phillips that do not contain larger quantities of mercury. USEI will continue with this policy as the high-mercury lamps exceed their service life; Recycle / Re-generation of Activated Carbon utilized during the treatment of air emissions associated with the historic silos; USEI employs off-site recycling of spent lead-acid batteries.
