Hi Bob,
Here is it! I hope your week has gone OK, digging out from email and re-acclimating after a week in Italy.
I'm sorry I had to miss the discussion with Joe M on his UFP testing plans – sounds potentially duplicative with what you are planning and doing but hopefully it is really more of a good synergy.
M

Marion,

Is the HEI report available somewhere? (Maybe you've already sent it to me?)

Thanks!
Bob

Jim

I'm sorry I never got a chance to review.

One very important new study for us on this issue is a recent 2013 hei report on fine pm, in which hei says mass is still the way to go, but more research on the issue is needed.

How did this meeting go?

Janet is meeting with Andreas Mayer (Vert program) and John Mooney this afternoon and it seems as though Andraes wants to take another run at us regarding controlling particle number instead of particle mass.

We just received the material that Andreas intends to review with Janet. I plan to be in the meeting as well.

I know this is very short notice but please take a quick look at the attachment and send me any reactions.

Thanks,
Jim
