Dave and Ken,

I asked our contractor to search Atlantic Richfield's files to see if we have copies of the records that CH2M said they were unable to locate in the SPS document archives. CH2M had listed several box numbers and empty file names, but not specific document identifiers. We obviously can't account for any empty files in the SPS archives, and it was difficult to precisely match the file descriptions provided by CH2M with our records, but we do appear to have some of the documents that CH2M is looking for. Due to file size, I will forward the documents as attachments to this and three following emails.

Please note that Atlantic Richfield has already spent a significant amount of time analyzing sulfur source information as it relates to characterizing the nature and extent of releases of hazardous substances to groundwater. We recognize that EPA is also interested in better understanding this information, but it's probably not necessary for CH2M to start from scratch in analyzing the historical records on this topic. It may be more efficient for us to convene a technical review meeting to discuss the results and findings of Atlantic Richfield's analysis. I could see scheduling such a meeting sometime later this summer. In the meantime, please feel free to contact me with any questions relating to the attached files.

Thanks,
-jack

Hi Jack:

I hope you are doing well and keeping busy. Following up with you on Dave's request below to see if progress has been made looking for these files? When this work occurred in 2011, I recall that Jere had asked for a copy of the documents that were scanned - do you recall if these files were ever sent to Jere via CD or flash drive? If so, they should reside with EPA and we could also pursue that avenue. If they were not copied/sent, can they be copied/sent to Dave so that EPA possess a copy of what was scanned? If a quick phone call would benefit the request, let me know what date/time works best and I will give you a ring.

Thanks Jack,

D. Ken Greene, CHMM

Dave,
I have someone looking into our files for the referenced documents. I'll let you know what we find.

Taurus,

Thanks for helping out with this information, I appreciate it.
CH2M is still trying to track down some information that isn't in the data base. Can Ken or Ilka contact you directly to follow up?

Jack,

Can you let us know whether this information might among the documents ARC previously scanned? I assume Brown and Caldwell used some of that information for their sulfur isotopic data interpretation. If possible I would prefer to have Ken and Ilka work with you and your staff to try and track these documents down. But let me know if I need to make a formal information request.

Thanks again for your help.

Best Regards
Dave Seter

Hi Dave,

I did a quick search of the electronic database that we got from CH2M and found some of the files. Sending 1 of 2.

Jack, Taurus,

EPA has tasked its contractor CH2M with reviewing information on sources of sulfur used by Anaconda and by Arimetco. CH2M reviewed the document archives at the SPS facilities back in October and couldn't locate some of the files they need. EPA would appreciate your assistance in tracking down the files, or if electronic scanned versions are available, that would be good, too. Please see the list of information we need below. If you could report back to me and copy CH2M on your reply that would be great. Thanks.
