5/22/14

John Gear - Enviro-Sciences (of Delaware) Inc.

Alcoa

Building 12

There was a portion of larger site that Alcoa operated on/seperate from main site was Bldg 12 - he worked this portion only

Bldg 12 - walls/floors contained PCBs

1990's DEP required they be sealed/deed restriction

Then regs changed & no longer required indoor regulation. DEP contacted them to remove deed restriction and issue

RAO - because DEP no longer regulated.

Prior to that they had to submit reports every 2 years on maintenance of controls.

2-3 years ago remove deed restrictions

Not involved post demolition. Involved just prior to DEP RAO request.

Subsequent to that - 3 months ago contacted by company working on site looking for documents - found 2 tanks containing PCBs. → we have letter from them on pending cleanup

Bi-annual certification

Irv. Cohen - x203

same number

973-398-8183

remainder of site

Len Ramino - DEP few months ago

Contacted him to rescind RAO

Didn't make sense - changed from site wide RAO/area specific →

will email both original & revision

Irv was involved in greater site work on portion beyond Bldg 12. He believes that remainder of site dates back to 1990s as well.
Not familiar w/ project discussed on website. – Irv. may be.
