- Where does LNG come from?
- Used just at Argyle, or elsewhere? ✓
- How much production? ✓
- In use all time? ✓
- Considered a closed loop system?
- Use sea water to reheat gas?
- Where else has this been done? ✓
- What would the construction be like? ✓
- Ocean Discharge Criteria - unreasonable degradation marine env.
- Cooling Water Intake - ~50 MGD *316(b)
  What kind of intake structure? ✓
- What would temperature of discharge be?
  thermal modelling? - FERC App
- metals, mercury "contaminants of concern" Jobos Bay -
- Use biofouling agents? ✓

RI- limits, Flow, TSS,

Permits Management office vs. EQB

hydrostatic test discharges do require NPDES
permit coverage
