Stephen:

EPA issued an LOW to this facility on July 31st, 2018. A response was due September 2nd, 2018. Since no response was received, I contacted Mr. Mike Butikofer (563- 783-2420) on September 28th, 2018. Mr. Butikofer indicated that he "missed" the portion of the LOW that requested a response. He said he would send me an email the following week detailing actions taken to address concerns at his facility.

Thursday October 25th, 2018. I tried to contact Mr. Butikofer by phone since I had not received any response from him. No one answered this time and I was not allowed to leave a message.

This facility had approximately 1800 head of beef cattle in both open lots and confinement buildings (3 different adjacent locations) at the time of the EPA inspection in April, 2018. The facility does not have an NPDES permit and does not have adequate runoff controls to prevent wastewater from discharging into Howard/Roberts Creek. Recommend that this facility be re-inspected during a significant precipitation event. I plan to close this inspection. Let me know if you have any questions. Thanks.

Regards Don
