Dear Miss Dunton:

My family lived in the Riverside Gardens area. As you are probably aware, the landfill is not being taken care of properly by our county government. Our homes are now sitting on top of methane gas and other chemicals. The vents at the landfill are deteriorating because it's not being handled properly. If the methane gas was in the homes of about seven families that they were brought out, you know it is there now. Some families in this community are complaining that chemicals are in their homes, but nothing is being done about it. When E.P.A. tested for chemicals in these homes, they failed to test for methane. We would like to know why this happened. If we are sitting on top of methane, then our homes ought to be tested for it.

On top of all of this, Bordons Chemical Plant is about 200 ft. from some families. Almost every day we can smell badly from chemicals. We would like to know how dangerous this is to our health but no one will answer our questions, not even (E.P.A.)

If it is dangerous to our Health, then we ought to be told.

We feel something needs to be done about this situation immediately.

Sincerely Yours.

Mr. + Mrs. Arnold Lickey
