-Emergency and Remedial Response
of Lees Lane Landfill Hazardous
waste site

Betty L. Husband
6705 Elmwood Ave
Louisville Ky 40216

In Concern of Hazardous waste at
Lees Lane Landfill went to meeting
on Oct 15. 1985 heard what was
said about waste and the test
that were done on surrounding
[illegible] there were no tests done
on the Methane gas that was the
threat back in 1975 There was
a system put in and around the
landfill which has not been
repaired and is not in working
order. I don't think even if the

LEE 001 000647-E

System is repaired or replaced
the danger of the Gas or
threat of the Migration of waste
will not be stopped. because each
year the Migration of waste
has spread closer to the
residents of River Side Gardens
from the Lees Lane Landfill I
don't think the system which
installed now has helped any
because the Maintence of the system
has not been kept up. the Methane
Gases have been Coming into our
lateral lines and septic tank
Systems and right into our homes
our water systems have been Contaminated
in river and homes, I think the
residents of Lees Lane & Riverside Gardens

LEE 001
000647-F

should be R. located somewhere
else. Not only because of
the Lees Lane Landfill but
because of the Local Businesses
of Chemicals Plants on three
sides of us we are Boxed in
between all these Chemicals
our Property has been depreciated
and we can't even Sell out
to any one. even if we wanted
to. I think our Community of RiverSide
Gardens should be bought out
and Made into Industrial Sites
all together
