TO: Cate Jenkins/HQ
Barbara Cook IDWAWN

FROM: Jack Coakley

DATE: 7/28/83

TIME:

SUBJECT: North Star Steel IAD 000 223354

SUMMARY OF COMMUNICATION

Cate Jenkins (382-4801) is scientist, on Alan Corson staff, working on steel industry waste.

Problem arose when North Star did sampling of soil to verify closure of K061 waste pile. borings got into slag. - Cate said slag has been considered non hazardous but if it failed EP tox it would be hazardous. She suggested that the problem could be localized ie was this old slag that may have been contaminated with bag house dust. She will talk to some other people about the situation and get back to me.

Barbara will contact North Star to see

CONCLUSIONS, ACTION TAKEN OR REQUIRED

if they have sampled any other slag to see if this condition is typical or isolated

Company Contact is David Lewis 319-232-3231
Consultant (Shive Hattery) contact is Larry Davidson 319-354-3040
