Brown bag on redevelopment at Treasure Island – Time to mark your calendars!!

Have you ever been to Treasure Island? How about Yerba Buena Island? Do you know these islands are being cleaned up and REdeveloped?

Treasure Island and Yerba Buena Island have been in the news a lot recently, as Treasure Island Community Development (TICD), a subdivision of Lennar, is making plans to start redevelopment at both Islands, in partnership with the Treasure Island Development Authority (TIDA). The project is being marketed as one of the most sustainable large development projects in the United States. As it is slated to become an entirely new San Francisco neighborhood, this is an exciting project! A lot of critics complain that long-time residents will be priced out of the islands, while others have questions about the thoroughness of the cleanup.

Christopher Glenn is a Senior Environmental Engineer and Project Manager with Langan Treadwell Rollo. He works on environmental assessment, remediation, and mitigation projects, specializing in solving environmental challenges that arise during all phases of property development. His career spans from interning with the Navy

BRAC office in Pearl Harbor, Hawaii, during graduate school, to assisting San Francisco's agencies responsible for transfer and reuse of Treasure Island and Hunter's Point Naval Shipyard. Chris is also an excellent presenter; this coming September 22, he will offer a very polished presentation about Treasure Island and its future developments, to us in a concise brown bag format. This is our opportunity to learn about a fascinating slice of history in the making.

Time to mark your calendars. Please RSVP to Michelle or me. For an early peek, you can check out an earlier presentation on the subject:
