Section 1
Introduction

1.1 Background

The Red Penn Landfill is located in Oldham County, Kentucky. Waste Management, Inc. (Waste Management), and Ford Motor Company (Ford) have been implementing the remedy for the Red Penn Landfill in accordance with the Scope of Work (SOW) (Waste Management, 1998), which is contained in an Agreed Order (KDWM, 1999).

As described in the SOW, the major components of the remedy for the site are as follows:

- Installation and maintenance of a multi-layer landfill cover
- Installation and maintenance of access controls
- Evaluation of leachate head within the landfill
- Implementation of annual groundwater monitoring

Remedial action (RA) construction activities began at the site on May 5, 2000, and were substantially completed by September 20, 2000. Following the completion of the construction activities, operation, maintenance, and monitoring (OM&M) activities commenced in January 2001 and continued through October 2005. The OM&M portion of the RA for the site includes activities such as inspections of the final cover system and site monitoring networks, general maintenance, and leachate head and groundwater/surface water monitoring.

The annual OM&M reports for 2001 through 2005, which document the activities performed during each annual reporting period, were prepared in accordance with the Post-Construction Performance Standards Verification Plan (Section 3 of the Final Remedial Design document) (RMT, October 1999) and the Operation, Monitoring, and Maintenance Plan (Appendix G of the Final Remedial Design). The purpose of these reports was to provide documentation of the OM&M activities that were performed during each annual reporting period following the installation of the upgraded final cover. The annual monitoring reports were submitted previously to the Kentucky Division of Waste Management or its predecessor, the Kentucky Natural Resources and Environmental Protection Cabinet, (collectively, the KDWM), and are also included in electronic format in Appendix A of this document.

A 5-year review was performed for the period of January 2001 through December 2005, which covers the 5 years of monitoring leachate head, groundwater, and surface water, and conducting site inspections, and the additional administrative and sampling activities

performed between April 2007, and April 2008, as requested by the KDWM in a letter dated February 26, 2007.

1.2 Purpose and Scope

The scope of this Second 5-year review of the remedy covers the period from January 2006 through December 2010, and documents the results of the site inspections, maintenance performed, and the surface water and groundwater monitoring results.

The effectiveness of the RA was evaluated by (1) reviewing the objectives contained in the SOW to address the potential threats to human health and the environment (identified in the Risk Assessment) (CDM, 1993), (2) summarizing the remedial actions that have been implemented to meet these objectives (refer to the Construction Documentation Report) (RMT, 2000), and (3) assessing the findings of the OM&M activities to determine if the objectives have been met.

Additional items requested in a February 26, 2007, letter from the KDWM are also addressed in this 5-Year Review Report.

1.3 Report Organization

The organization of this report generally follows the USEPA's Comprehensive Five-Year Review Guidance (USEPA, 2001), with modification to address the requirements of the Agreed Order. The following sections present the site chronology and background information, the remedial actions selected and implemented, and the review process and its findings and conclusions.

Section 2
Site Chronology

A summary of the site chronology, including a history of operational and regulatory activities from the early 1940s to 2008, is presented in the following table:

History of Operational and Regulatory Activities
Red Penn Landfill - Pewee Valley, Kentucky

DATE	ACTIVITY
Early 1940s	Site began accepting waste.
March 1, 1954	Site was leased as "dump ground" by Bert Logsdon and Chris P. Pennington.
November 6, 1959	Landfill permit was granted to the Red Penn Sanitation Company by the Oldham County Health Department.
March 1, 1962; July 27, 1964; September 14, 1964	Red Penn Sanitation Company purchased portions of the property now known as the Red Penn Landfill.
December 4, 1968	An Operation Permit to operate a sanitary landfill was granted to the Red Penn Sanitation Company by the Kentucky Department of Health.
January 29, 1970	Red Penn Sanitation Company purchased property to the west of the current site for use as a soil borrow area.
1972 to 1982	Red Penn Sanitation Company was cited for violations by the Kentucky Division of Solid Waste, which is now referred to as the Kentucky Division of Waste Management (KDWM) under the Natural Resources and Environmental Protection Cabinet.
1978	Red Penn Sanitation Company sold a 3.74-acre portion of the site to an employee, Fred Northup.
March 17, 1986	The KDWM was notified that suspected hazardous waste had been found at the site.
March 31, 1986	The KDWM collected soil samples from the drums and soil at the entrance to the landfill.
May 27, 1986	The KDWM completed a preliminary assessment report.
July 2, 1986	The KDWM initiated a site investigation at the landfill.
July 22, 1986	The State of Kentucky filed a Notice of Violation against the Red Penn Sanitation Company concerning removal of waste discovered on-site.
October 29, 1986	The KDWM completed the site investigation report.
September to October 1986	Drums and soil were removed from the entrance of the landfill and the drum excavation area.
December 1, 1986	The final permit for operation of the Red Penn Landfill expired.

History of Operational and Regulatory Activities (continued)
Red Penn Landfill - Pewee Valley, Kentucky

DATE	ACTIVITY
April 1987	The KDWM requested voluntary cooperation of several parties responsible for the disposal of hazardous waste at the landfill.
August 14, 1987	The KDWM ordered that the landfill be closed in accordance with Kentucky statutes and regulations.
August 27, 1987	The Red Penn site was given a Hazard Ranking System score of 38.1.
March 31, 1989	The Red Penn Landfill was placed on the National Priorities List.
September to October 1989	An investigation was conducted by the United States Environmental Protection Agency (USEPA) Region IV Emergency Response Contractor (Weston TAT).
September 14, 1990	A preliminary health assessment was issued by the Agency for Toxic Substances and Disease Registry.
September 11, 1990	The USEPA issued a work assignment to CDM Federal Programs Corporation to conduct the Remedial Investigation for the Red Penn site.
June 18, 1993	CDM Federal Programs Corporation submitted the Revised Draft Remedial Investigation Report to the USEPA.
April 7, 1994	The KDWM met with several "potentially responsible parties" (PRPs) regarding performance of remedial activities at the site.
August 29, 1994	Several of the PRPs (Waste Management, Ford, and ARCO) submitted to the KDWM a Scope of Work (SOW).
Spring/Summer 1995	A revised SOW was submitted to the KDWM on April 7, 1995, and approved by the KDWM in May 1995. The PRPs and the KDWM began negotiating an Agreed Order for performance of the remedy, and the PRPs asked the KDWM to notice other PRPs.
Spring/Summer 1997	The KDWM notified the PRPs that it had reviewed the additional information submitted and was declining to notice any additional PRPs. The PRPs and the KDWM met to discuss the terms of the Agreed Order; the KDWM informed the PRPs that additional work needed to be incorporated into the SOW.
October 8, 1997; March 30, 1998	Revised SOW was submitted to the KDWM.
May 1, 1998	The PRPs submitted the final SOW.
May 5, 1998	The KDWM approved the Final SOW submitted by the PRPs.
Summer 1998 – Summer 1999	Negotiations continued between the KDWM and the PRPs, and amongst the PRPs themselves, including Red Penn Sanitation and its shareholders.
August 13, 1999	An Agreed Order between the KDWM and seven PRPs was issued.
May 1999	RMT, Inc., conducted a predesign field study, which included the installation of three leachate head wells.
October 11, 1999	RMT, Inc., submitted the Final Remedial Design for the Red-Penn Landfill for Waste Management, Inc., and Ford Motor Company.

History of Operational and Regulatory Activities (continued)
Red Penn Landfill - Pewee Valley, Kentucky

DATE	ACTIVITY
October 29, 1999	The KDWM approved the Remedial Design report.
May to October 2000	A multi-layer landfill cover was constructed over the Red Penn Landfill.
September 2000	The USEPA issued a Record of Decision, which stated that, based on the results of the RI, including the Risk Assessment, no CERCLA-funded remedial action was necessary to ensure that human health and the environment were protected.
December 2000	RMT, Inc., submitted the Construction Documentation Report for the Red Penn Landfill.
January 2001 to October 2005	Operation, monitoring, and maintenance activities were performed.
March 26, 2001	The KDWM approved the Construction Documentation Report.
April 10, 2002	RMT, Inc., submitted the Year 2001 Annual OM&M Report.
July 23, 2002	The KDWM reviewed the Year 2001 Annual OM&M Report.
February 24, 2003	Waste Management filed a Deed Restriction for the Red Penn property with Oldham County.
March 13, 2003	RMT, Inc., submitted the Year 2002 Annual OM&M Report.
March 13, 2003	A request to eliminate MW8002-8975 and MW8002-8979 from the monitoring program was sent by RMT, Inc., on behalf of the PRPs, to the KDWM.
April 2, 2003	The KDWM approved a reduction in the sampling frequency for MW8002-8975 and MW8002-8979 from quarterly to annually instead of eliminating these wells from the sampling program.
December 19, 2003	RMT, Inc., submitted the Year 2003 Annual OM&M Report.
February 11, 2004	The KDWM reviewed the Year 2003 Annual OM&M Report.
January 17, 2005	RMT, Inc., submitted the Year 2004 Annual OM&M Report.
December 5, 2005	RMT, Inc., submitted the Year 2005 Annual OM&M Report.
February 1, 2006	Waste Management submitted the Agreed Order 5-Year Review Report that was prepared by RMT, Inc.
February 26, 2007	The KDWM requested that additional items be addressed in the Agreed Order 5-Year Review Report prior to approval. The additional items included the Biological Study, sampling of the Deep Aquifer, registration of an Environmental Covenant at the Oldham County Courthouse, and completion of the 5-year final landfill inspection.
April 19, 2007	The PRPs performed the additional sampling of the Deep Aquifer, as requested by the KDWM in its February 26, 2007, letter.
Fall 2007	The PRPs finalized the Environmental Covenant between the KDWM and the PRPs, as requested by the KDWM in its February 26, 2007, letter.

History of Operational and Regulatory Activities (continued)
Red Penn Landfill - Pewee Valley, Kentucky

DATE	ACTIVITY
April 23, 2008	The PRPs performed the 5-year final landfill inspection with KDWM, as requested by the KDWM in its February 26, 2007, letter.
May 2008	The PRPs submitted a revised Agreed Order 5-Year Review Report, which included the additional information requested by the KDWM in its February 26, 2007, letter.
June 30, 2008	The PRPs recorded the signed Environmental Covenant in the office of the Clerk of the Oldham County Court.
November 6, 2008	KDWM submitted a letter to the PRPs concluding that the first 5-year review is complete, however due to the continued presence of waste at the site, additional 5 year reviews will be necessary.
February 4, 2009	The PRPs submitted a letter to the KDWM reiterating the items that will be required for compliance going forward.
February 26, 2009	The PRPs submitted a revised Operation, Maintenance, and Monitoring Plan to the KDWM.
March 3, 2009	KDWM approved the Operation, Maintenance, and Monitoring Plan on the condition that two minor additions to the text be made.
March 10, 2009	The PRPs submitted a Final Revised Operation, Maintenance, and Monitoring Plan to the KDWM that included the minor additions requested by KDWM.
April 22, 2009	The PRPs submitted a Workplan for the abandonment of the leachate head wells to the KDWM.
July 15, 2009	KDWM approved the Workplan for the abandonment of the leachate head wells via an e-mail.
August 2009	The PRPs had American Drilling Services of Indianapolis, IN, abandon the leachate head wells.
September 17, 2009	RMT, Inc. submitted documentation of the abandonment of the leachate head well to Waste Management, Inc.
September 2010	The PRPs performed the second 5-year review landfill inspection with KDWM and performed a round of surface water and groundwater monitoring.
December 2010	The PRPs submitted a Second Agreed Order 5-Year Review Report.

Section 3
Site Background

3.1 Physical Characteristics

The site is located approximately 1.5 miles southeast of Pewee Valley, Kentucky, at the southern tip of Oldham County (refer to Figure 1). Shelby County lies to the east and southeast of the site, and Jefferson County lies to the south and southwest. The property is bounded to the east and southeast by Floyd's Fork Creek, to the southwest by Kentucky State Highway 362 (Ash Avenue) and an unnamed tributary of Floyd's Fork Creek, and to the northwest by Hawley Gibson Road. Floyd's Fork Creek is a perennial southwesterly flowing fork of the Salt River. The Salt River is located approximately 12 miles south of the site and flows westward into the Ohio River.

The landfill is located on approximately 151 acres of property owned by Red Penn Sanitation Company. Waste was disposed on approximately 48 of the 151 acres. The remaining 103 acres were used as a borrow area for landfill cover soil or were left as a wooded buffer area. After the installation of the upgraded cover, the elevation of the crest of the landfill was approximately 710 feet above mean sea level (M.S.L.) and approximately 100 feet above Floyd's Fork Creek. Before the construction of the upgraded cover, surface water drained radially off of the landfill. Diversion berms were installed as part of the upgraded cover to divert a portion of the surface water runoff to a riprap spillway and the perimeter ditch along the eastern side of the site (refer to Figure 2).

3.2 Local Land and Resource Use

Current land use around the site is primarily agricultural and residential. Agricultural activities include crop, pasture, and livestock operations. The Kentucky Correctional Institute for Women is located approximately 1,000 feet southeast of the site. Residential areas are located to the north, south, and west of the site. A residential subdivision was recently constructed to the north of the site, and municipal water was extended to this subdivision.

Commercial and industrial activity is limited near the site. The Ash Avenue Wastewater Treatment Facility is located to the northwest.

3.3 History of Contamination

The Red Penn Landfill began receiving waste in the 1940s, obtained a solid waste permit in 1959, and operated until 1986, when the KDWM closed the facility. A few months after the

landfill ceased operation, drums of hazardous waste were discovered at both the entrance to the landfill and buried in a borrow area adjacent to the landfill. The KDWM conducted a Preliminary Assessment and a Site Investigation of the site in 1986. On the basis of the results of the Preliminary Assessment and Site Investigation, which indicated high concentrations of metals and organics in the samples collected from the drum excavation area, the KDWM filed a Request for Appropriate Action for immediate removal of the industrial waste discovered on-site. The contaminated soil and drums were removed from the site entrance and the drum excavation area in September and October 1986.

In August 1987, the KDWM scored the Red Penn site using the Hazard Ranking System; a score of 38.1 was given. The site was placed on the USEPA's National Priority List in March 1989. On September 11, 1990, the USEPA issued a work assignment to CDM Federal Programs Corporation (CDM) to conduct a Remedial Investigation (RI) (CDM, 1993) at the Red Penn site. On the basis of the results of the RI, including the risk assessment, the USEPA determined that a CERCLA-funded remedial action was not justified for the site. However, because the landfill had not been properly closed by the Red Penn Sanitation Company, KDWM noticed the PRPs in order to have them conduct a corrective action at the site. In August 1999, the Commonwealth of Kentucky and several of the PRPs entered into an Agreed Order (KDWM, 1999) that required the PRPs to remediate the site in accordance with the KDWM-approved Scope of Work dated May 1, 1998.

Waste Management and Ford, two of the seven PRPs, retained RMT to perform predesign studies and to prepare a Remedial Design in accordance with the Scope of Work dated May 1, 1998, and the Agreed Order dated August 13, 1999. On October 29, 1999, the KDWM approved the Remedial Design report. The PRPs completed the construction of the approved remedy on October 10, 2000.

On September 19, 2000, the USEPA issued a Record of Decision (ROD), which stated that, based on the results of the RI, including the Risk Assessment, no CERCLA-funded remedial action was required to ensure that human health and the environment would be protected.

3.4 Basis for Taking Action

The hydrogeologic investigation that was part of the RI (CDM, 1993) included a geophysical evaluation, fracture trace studies, dye tracing studies, and private well surveys. Groundwater flow in the surficial aquifer was believed to be wholly intercepted by Floyd's Fork Creek and the unnamed tributary west of the site. The dye tracing investigation provided no evidence that groundwater was migrating off-site, except via discharge into Floyd's Fork Creek and the tributary west of the site.

Other fieldwork conducted as part of the RI included a topographic survey; soil gas screening; surficial soil, surface water, sediment, groundwater, and leachate sampling; and an ecological investigation. Soil sample locations were chosen to coincide with the highest soil gas anomalies determined during the soil gas screening. Surface water and sediment samples were collected from Floyd's Fork Creek and the unnamed tributary to the west of the site, and from surface flows traversing the landfill. Leachate seeps were sampled and analyzed. Low concentrations of metals and various organic compounds, including pesticides and PCBs, were detected in most of the sampled media.

The leachate seeps contained the highest levels of contaminants at the site. Of the 10 contaminants indicated as contaminants of concern (COCs), six were detected in the leachate (benzene; cadmium; chromium; and the pesticides alpha-BHC, beta-BHC, and gamma-BHC). Cyanide was detected at low levels in the surface soil and surface water samples, and lead was detected at low levels in several of the soil samples. Low levels of carbon disulfide and concentrations of iron and manganese that exceeded Federal Secondary Drinking Water Standards were detected in the two on-site monitoring wells (Secondary Standards are not health-based criteria and pertain to aesthetic qualities, such as odor, taste, and color). Bis(2-ethylhexyl)phthalate, a common laboratory contaminant, was detected at a low concentration in one of the monitoring wells.

As reported by CDM, the results of the ecological risk assessment indicated that the most significant adverse ecological impact was related to the leachate seeps, which apparently limited plant growth, and killed test aquatic microorganisms upon direct contact. However, the findings noted that leachate outbreaks were localized and the flow was restricted to the site. The study of flora and fauna during the RI concluded that there were no endangered species or habitats in the area. Furthermore, the RI indicated that chemicals that may potentially bioaccumulate in the food chain were randomly encountered in samples analyzed during the ecological investigation. In light of the concentrations detected and the area potentially affected, CDM determined that these chemicals were not likely to bioaccumulate in the food chain to the extent that a threat would be posed to human health and the environment. Therefore, the RI concluded that no major ecological risks were associated with the landfill.

The RI risk assessment considered the analytical results from the sampled media and evaluated potentially completed exposure scenarios and migration pathways. The noncancer risk associated with ingestion of soil, inhalation of dusts, dermal contact with soil, ingestion and dermal contact with leachate, ingestion of groundwater, and inhalation of volatile organic compounds released from groundwater was shown to be within acceptable regulatory standards. The USEPA's acceptable risk level for noncancer risk is a Hazard Index (HI) of less than 1.0. The summed HI for a child and an adult was calculated to be 0.98. In addition, by

summing the risks for a child and an adult across all pathways, the total site cancer risk was calculated to be 1.3 in 100,000. This level of risk was within the EPA's acceptable range of 1 in 10,000 to 1 in 1,000,000. Therefore, no COCs were identified for the site and the USEPA issued a no further action ROD on September 19, 2000.

Section 4
Remedial Actions

4.1 Remedy Selection

4.1.1 Objectives

On the basis of the findings of the Remedial Investigation, including the risk assessment (CDM, 1993), the SOW identified the following objectives in protecting human health and the environment:

- To prevent exposure to waste materials
- To install access controls
- To monitor for the effectiveness of the remedial actions

In addition, the SOW required that the remedial design be developed to address the following criteria:

- Protection of human health and the environment by preventing direct contact with the buried waste
- Installation of access controls
- Minimization of leachate generation from precipitation
- Prevention of surface water from coming in direct contact with the waste
- Stability of the cover for both the short and the long term

4.1.2 Selected Remedy

The Final Remedial Design (RMT, 1999) describes the components of the selected remedy, which included the following major components:

- **Access controls** - Site security improvements will be implemented to control access, preclude inadvertent exposure to landfill materials, and prevent vandalism at the site.
- **Landfill cover** - A multi-layer landfill cover will be installed to be compliant with the SOW. Routine maintenance of the cover will be performed in accordance with the approved OM&M Plan.
- **Leachate head monitoring** - The leachate head levels at three monitoring points will be measured and recorded. After 5 years, trend analyses will be prepared and

evaluated, along with groundwater quality data, to determine if further monitoring or leachate management is necessary.

- **Groundwater monitoring** - The groundwater monitoring program will be implemented to assess the effectiveness of the remedial action. After 5 years, trend analyses will be prepared and evaluated to determine if further monitoring or leachate management is necessary.

4.2 Remedy Implementation

Waste Management and Ford initiated the RA activities on May 5, 2000, in accordance with the requirements of the SOW and the Agreed Order between the Commonwealth of Kentucky and the PRPs. The construction of the upgraded landfill cover was completed in conformance with the Final Remedial Design (RMT, 1999). Documentation of the construction is contained in the Construction Documentation Report (RMT, 2000). The construction was approved by the KDWM on March 26, 2001 (refer to Appendix B). In January 2001, operation, monitoring, and maintenance activities commenced. A list of the contractors performing operation and maintenance at the site is provided in Table 1.

The following subsections describe the implementation of the remedy in more detail.

4.2.1 Access Controls

The site is located in a rural setting, and unauthorized entrance via a paved road is restricted by a locked entrance gate on Ash Avenue. Several natural topographic features restrict access to the site as follows:

- Floyd's Fork Creek on the southern and eastern sides of the landfill
- The dense vegetation and the distance from Hawley Gibson Road on the western and northwestern sides of the landfill
- The extreme relief and the dense vegetation adjacent to the entrance gate on the western and southwestern sides of the landfill (Ash Avenue)

On August 31, 1999, the Agreed Order was recorded against the deed for the property containing the Red Penn Landfill by counsel for the Red Penn Sanitation Company. Waste Management filed a deed restriction with Oldham County on the property containing the Red Penn Landfill, in order to fulfill the requirements of the Agreed Order. The deed restriction filed by Waste Management is included in Appendix C.

In addition, during the fall of 2007, Red-Penn Sanitation Company, Inc.; Waste Management of Kentucky, L.L.C.; Ford Motor Company; and John G. Guelda finalized the Environmental Covenant (EC) for the property containing the Red Penn Landfill in

order to fulfill the requirements stated in the February 26, 2007, letter from the KDWM to Waste Management, regarding the 5-Year Review Report for the Red Penn Landfill. The signed EC is included in Appendix C.

4.2.2 Upgraded Cover

The upgraded cover was constructed to be compliant with the SOW and the approved Final Remedial Design. The upgraded cover consists of a 3- to 4-inch–thick general fill grading layer, a Bentomat® geosynthetic clay liner (GCL), a geocomposite layer, and a minimum 18-inch–thick vegetative layer. The final waste grades were adjusted from the grades in the Remedial Design, which were based on a 1996 aerial photograph, to account for differential settlement that had taken place since the time of the aerial photograph. The intent of the Remedial Design grading plan was to establish a minimum slope of approximately 2 percent and a maximum slope of approximately 25 percent. In addition to the upgraded cover, surface water controls, including diversion berms, and a riprap spillway and riprap check dams, were installed.

Since the cover was constructed, Waste Management, Ford, and RMT have performed regular site inspections, including inspecting for evidence of stressed or sparse vegetation, erosion, settlement, and burrowing animals. When a problem has been identified, repairs to the cover have been made as soon as practicable. Documentation of the site inspections, and of the repair or maintenance activities performed, has been submitted to the KDWM in the annual OM&M reports (Refer to Appendix A).

4.2.3 Leachate Monitoring Program

Leachate head monitoring commenced following the installation of the leachate head wells in May 1999. The leachate head levels in LH-1, LH-2, and LH-3 (refer to Figure 2 for the location of the leachate head wells) were measured in accordance with the OM&M Plan (Appendix G of the Final Remedial Design) (RMT, 1999) and the Post-Construction Performance Standards Verification Plan (Section 3 of the Final Remedial Design). The leachate head elevations have been reported to the KDWM as part of the annual OM&M reports (refer to Appendix A).

The PRPs abandoned the leachate head wells in August 2009, following receiving approval from the KDWM that monitoring the leachate head wells was no longer required and the wells could be abandoned.

4.2.4 Groundwater Monitoring Program

Groundwater monitoring commenced upon completion of the construction of the upgraded final cover. Groundwater was sampled at three monitoring wells and five springs in accordance with the requirements of the OM&M Plan (Appendix G of the Final Remedial Design) (RMT, 1999) and the Post-Construction Performance Standards Verification Plan (PSVP) (Section 3 of the Final Remedial Design). The locations of the groundwater monitoring wells and the springs are shown on Figure 2. The water samples were analyzed for the parameters listed in Table 2. The results of the groundwater analyses were reported to the KDWM as part of the annual OM&M reports (refer to Appendix A).

In addition to the groundwater sampling performed as part of the OM&M Plan and the PSVP, the PRPs performed the additional sampling of the two Deep Aquifer wells, per the KDWM letter dated February 26, 2007 (refer to Appendix A).

In accordance with the Revised OM&M Plan dated March 2009, groundwater monitoring is required once every 5 years as part of the 5-Year Review. A round of surface water and groundwater samples were collected and analyzed for the parameters listed in Table 2, in September 2010. During the second 5-year sampling event, only two locations (MW-6 and Spring #1) had sufficient water to collect a sample for laboratory analysis.

4.2.5 Drum Removal Activities

An area of buried drums was encountered during the construction of the upgraded cover in 2000. The drums were discovered when general fill for the upgraded cover was excavated from the western end of the borrow area, northwest of the landfill. Forty-two crushed or partially crushed drums, as well as the visually impacted soil surrounding the drums, were removed and disposed off-site at Von Roll America, Inc., located in East Liverpool, Ohio.

Section 5
5-Year Review Process

5.1 Review Team

This 5-Year Review report was prepared by RMT, Inc., on behalf of Waste Management and Ford, based on the site inspections performed since the first 5-Year Review and the surface water and groundwater monitoring data collected by RMT in September 2010.

5.2 Review Methodology

This 5-Year Review report includes a review of the construction report, the annual OM&M reports, the site inspections performed since the first 5-Year Review, and the surface water and groundwater monitoring data collected by RMT in April 2007 and September 2010.

5.3 Community Notification and Involvement

This 5-Year Review report has been prepared for submission to the KDWM.

5.4 Document Review

This 5-Year Review report includes a review of the project documents listed in Appendix D of this report.

5.5 Data Review

This 5-Year Review report includes a review of the requirements of the Agreed Order, the monitoring data that were included in the annual OM&M reports and the monitoring data that has been collected since the last 5-Year Review. A summary of the design basis for the site was presented in Subsection 4.1.1, and a summary of the monitoring program for the site is presented in Table 2. Surface water and groundwater monitoring data is included in Appendix E and time trends are provided on Figures 3 through 9. Although the leachate head wells were abandoned in August 2009, the leachate head data from May 1999 through August 2005 is included on Figure 10.

5.5.1 Access Control

On February 24, 2003, Waste Management filed a declaration of restrictions with Oldham County to inform the current and potential future property owners of the land use restrictions placed on the Red Penn Landfill property in accordance with the Agreed Order.

During the fall of 2007, Red-Penn Sanitation Company, Inc.; Waste Management of Kentucky, L.L.C.; Ford Motor Company; and John G. Guelda finalized the EC for the property containing the Red Penn Landfill in order to fulfill the requirements stated in the February 26, 2007, letter from the KDWM to Waste Management, regarding the 5-Year Review Report for the Red Penn Landfill. On June 30, 2008, the EC was recorded in the office of the clerk of the Oldham County Court. The signed EC is included in Appendix C.

The findings of the site inspections performed during this 5-year review period indicate that the security measures in place are adequate. The entrance gate was replaced in 2010 and has remained locked. No vandalism has occurred at the site.

5.5.2 Landfill Cover

The findings of the site inspections performed during this 5-year review period indicate no situations in which waste has been exposed as a result of damage to the landfill cover due to erosion or burrowing animals. The cover vegetation appears to be healthy and no areas requiring maintenance were observed during the site inspections. Landfill cover settlement has been minor and uniform; thus, ponding of surface water has not been an issue.

During the September 2010 site inspection, no areas on the upgraded cover required repair.

In 2004, Waste Management and Ford retained the services of Simply Natural Landscaping Consulting of Louisville, Kentucky, to plant native plant species in areas outside of the limits of the upgraded cover to minimize future erosion of areas off of the cover, and to provide additional wildlife habitat. The plantings consisted of native grasses and 14 kinds of bushes and trees. Over 200 bushes and trees were planted.

Although it appears the majority of the bushes and trees did not survive, no areas off the final cover required maintenance based on the September 2010 site inspection.

5.5.3 Leachate Monitoring

In accordance with the Post-Construction Performance Standards Verification Plan (PSVP), the leachate head monitoring results were used to prepare trend analyses over time. The time trends for leachate elevations are presented in Table 3 and on Figure 10. The leachate level at LH-1 has been decreasing since the beginning of monitoring in May 1999, for a total decrease of approximately 24 feet. The current leachate level at LH-1 is approximately 3 feet above what is believed to be the base of the landfill. The leachate

level at LH-2 has decreased approximately 13 feet from the initial reading. The current leachate level at LH-2 is approximately 33 feet above what is believed to be the base of the landfill. The leachate level at LH-3 began decreasing shortly after the construction of the cover and has stabilized at or near (within a few feet) what is believed to be the base of the landfill.

Following receiving approval from the KDWM, the PPRs abandon the leachate head wells in August 2009. A letter documenting the abandonment of the leachate head wells was submitted by RMT to the KDWM on September 17, 2009.

5.5.4 Surface Water and Groundwater Monitoring

The surface water and groundwater analytical results from the first 5-year review period, the additional Deep Aquifer groundwater data requested in the February 26, 2007, KDWM letter, and the surface water and groundwater analytical results from the second 5-year review period are contained in Appendix E. Table 4 summarizes the number of times each parameter was detected since the upgraded cover was installed in 2000, and the minimum and maximum concentrations detected. As detailed in the PSVP, the data from the groundwater monitoring activities were used to prepare time trends (Figures 3 through 9) to determine if further groundwater and/or surface water monitoring, or leachate management is necessary.

5.5.5 Site Inspections

The findings of the site inspection performed during this 5-year review period indicated no situations in which waste has been exposed as a result of damage to the upgraded cover due to erosion or burrowing animals. Repairs and maintenance to the cover have included repairing erosion and tire ruts, and seeding and fertilizing the landfill cover. In addition, riprap was installed in areas off the upgraded cover to help stabilize the slopes and reduce erosion. The site inspection information for 2006 through 2010 is included in Appendix F.

5.6 Site Interviews

A site interview was conducted by Waste Management with KDWM staff on September 29, 2010 during a site visit, as a part of this report preparation.

Section 6
Findings and Conclusions

The remedy that was implemented at the Red Penn Landfill continues to be protective of human health and the environment after 5 years of OM&M, per the OM&M Plan and the PSVP, and the additional 5 years of monitoring and inspections performed through 2010. This is based on the implementation and performance of the site remedy described in Sections 4 and 5, and the monitoring results contained in Tables 3 through 5, and Appendix E.

In accordance with the Agreed Order and the PSVP, the leachate head monitoring results were evaluated following the Agreed Order 5-year period to determine if continued monitoring was necessary. Analysis of the time trends for leachate head (Figure 10) indicated that the installation of the upgraded final cover had reduced the overall leachate head within the landfill. Specifically, the leachate head elevations at LH-1 and LH-3 decreased since the installation of the upgraded cover, to the point where the elevations were within approximately 3 feet of the base of the landfill. The leachate head elevation at LH-2 also trended downward during the first 2 years following the installation of the upgraded cover. The leachate head reduction at LH-2 fluctuated between 11 to 18 feet below the ground surface during the during the period from 2003 through 2005. The results of the leachate head measurements indicated that the infiltration of precipitation through the cover has been minimized, and that the leachate head was reduced as a result. This reduction in the leachate head reduced the driving force and reduced the potential for leachate to migrate into the environment. As a result, in April 2009, the PRPs submitted a request to abandon the leachate head wells, which was approved on April 22, 2009, by the KDWM; and the leachate head wells were abandoned in August 2009.

In accordance with the Agreed Order and the PSVP, the groundwater monitoring results were evaluated after the first 5-years of monitoring to determine if additional monitoring or leachate management was necessary. In March 2009, a revised OM&M Plan was approved by KDWM, which requires groundwater monitoring only once every 5 years. During the second 5-year sampling event, only two locations (MW-6 and Spring #1) had sufficient water to collect a sample for laboratory analysis. The results of the second 5-year review samples were non-detect for all parameters, with the exception of barium and nickel at MW-6, and barium at Spring #1. The analytical results for barium and nickel were with the historical range indicated in Table 4 and are included in Appendix E. The time trends for the groundwater data indicate that more than half of the parameters analyzed have never been detected and the remainder of the constituents are stable or trending downward.

During the last 10 years of surface water and groundwater monitoring, only one parameter (lead) that was identified as a potential constituent of concern in the RI, exceeded the maximum concentrations detected at the time of the RI and used in the Risk Assessment. The highest concentration of lead detected during the RI was 9 μg/L. During the first monitoring event following the construction of the upgraded cover, lead was detected above this concentration at MW-8002-8979, Spring #3, and Spring #4 at concentrations of 22, 13, and 11 μg/L, respectively. Lead has not been detected above the Estimated Quantitation Limit (EQL) since 2001, including the samples collected in April 2007 and September 2010. Therefore, the conclusions of the RI, including the Biological Study, and the Risk Assessment, which stated that the noncancer risks and cancer risks associated with the landfill were within the USEPA's acceptable target range, are still applicable (refer to Subsection 3.4 of this report regarding the findings of the USEPA). Furthermore, as previously identified by the USEPA there are no impacts from leachate to Floyds Fork Creek nor are there any to the surrounding vegetation. This was verified as part of the 5-year review Final Inspections on both April 23, 2008 and September 29, 2010.

Monitoring wells MW-8002-8975 and MW-8002-8979 have been dry or have not sufficiently recharged during the monitoring events to obtain a sample 10 out of 13 events and 11 out of 13 events, respectively. Therefore, the PRPs are proposing that these two wells be abandoned and no longer be part of the monitoring program.

Section 7
Agreed Order Termination Requirements

The Agreed Order (KDWM, 1999) states that the Agreed Order shall terminate upon the Settling Parties' completion of all requirements described therein. The following table contains the requirements of the Agreed Order and documents the completion of these items.

Agreed Order Termination Requirements
Red Penn Landfill - Pewee Valley, Kentucky

REQUIREMENTS OF THE AGREED ORDER	
ACTION REQUIRED	ACTION TAKEN
Develop a Remedial Design (RD) in accordance with the provisions of all applicable state requirements and as outlined in the Scope of Work (SOW).	**Completed** as the Remedial Design was prepared in accordance with the SOW dated May 1, 1998. The Final Remedial Design was submitted on October 11, 1999, and approved by the KDWM on October 29, 1999.
Prepare and submit a prefinal design for approval by the KDWM.	**Completed** as the prefinal design was submitted in July 1999; and the KDWM provided comments on August 10, 1999.
Within 45 days of approval of the prefinal design, prepare and submit a final design for approval by the KDWM.	**Completed** as the Final Remedial Design was submitted on October 11, 1999, and was approved by the KDWM on October 29, 1999.
Within 45 days of approval of the RD, prepare and submit a Remedial Action Workplan (RAW) for approval by the KDWM.	**Completed** as the RAW was submitted on December 10, 1999; and the KDWM provided comments on December 27, 1999.
Implement the RAW.	**Completed** as Remedial Action construction began on May 5, 2000, and was completed on October 10, 2000.
Within 60 days of completion, prepare and submit a final report documenting the work outlined in the RAW.	**Completed** as the Construction Documentation Report was submitted on December 22, 2000, and was approved by the KDWM on March 26, 2001.
Perform operation and maintenance work as outlined in the Operations and Maintenance Plan included in the RD.	**Completed** as the operation and maintenance work was conducted in accordance with the Operations, Maintenance, and Monitoring Plan included in Appendix G of the Final Remedial Design. Annual OM&M Reports documenting the operations and maintenance work were submitted to the KDWM on April 10, 2002; March 13, 2003; December 13, 2003; January 17, 2005; and December 5, 2005.

Agreed Order Termination Requirements (continued)
Red Penn Landfill - Pewee Valley, Kentucky

REQUIREMENTS OF THE AGREED ORDER	
ACTION REQUIRED	**ACTION TAKEN**
Provide access to the site to the KDWM.	**Completed** as the Owner Settling Party, upon signature of the Agreed Order (per paragraph 27 of the Agreed Order), provided the KDWM access to the site.
Record an executed copy of the Agreed Order with the Oldham County Clerk, La Grange, Kentucky.	**Completed** as the attorney for the Owner Settling Party, Matthew Carey, recorded the Agreed Order with Oldham County on August 31, 1999 (Book D622, page 223-52).
REQUIREMENTS OF THE SCOPE OF WORK	
ACTION REQUIRED	**ACTION TAKEN**
Prepare the remedial design and the leachate evaluation study, addressing the following issues: ▪ Access controls ▪ Landfill cover design ▪ Leachate evaluation study ▪ Groundwater monitoring	**Completed** as these items were included in the approved Final Remedial Design submitted to the KDWM on October 11, 1999, and approved on October 29, 1999.
Prepare the RD addressing, at a minimum, the following items: ▪ Landfill cover configuration ▪ Erosion control and surface water flow ▪ Existing leachate ponds and ponded surface water ▪ Slope stability ▪ Remedial costs	**Completed** as these items were included in the approved Final Remedial Design submitted to the KDWM on October 11, 1999, and approved on October 29, 1999.
Design the landfill to meet the following minimum criteria: ▪ Protection of human health and the environment by preventing direct contact with buried waste ▪ Minimization of leachate generation from precipitation ▪ Minimization of final cover erosion	**Completed** as these design criteria were included in the approved Final Remedial Design submitted to the KDWM on October 11, 1999, and approved on October 29, 1999.
Fill in the two existing leachate ponds on the southern side of the landfill to match existing site contours. Water in the ponds will be removed prior to filling in the ponds. Existing surface water ponds located on top of the landfill will be drained prior to installation of the landfill cover.	**Completed** as the two leachate ponds on the southern side of the landfill were filled to match the existing site contours and minimize standing water. At the time of construction, standing water was not encountered in the leachate ponds or in low areas within the limits of waste.

Agreed Order Termination Requirements (continued)
Red Penn Landfill - Pewee Valley, Kentucky

REQUIREMENTS OF THE SCOPE OF WORK	
ACTION REQUIRED	ACTION TAKEN
A slope stability analysis will be performed for the following conditions: prior to landfill cover construction, during landfill cover construction, and after the landfill cover has been constructed.	**Completed** as part of the approved Final Remedial Design submitted to the KDWM on October 11, 1999, and approved on October 29, 1999, a global stability analysis was performed. This analysis included a discussion and the necessary calculations for the following conditions: ▪ prior to landfill cover construction ▪ during landfill cover construction ▪ after landfill cover construction
In addition to drawings and specifications, submit the following supporting documents as part of the prefinal design: ▪ Construction Quality Assurance Plan for construction of the landfill cover ▪ Post-Construction Performance Standard Verification Plan, including methods and procedures for monitoring the effectiveness of the design components	**Completed** as these items were included in the prefinal design document submitted to the KDWM in July 1999.
As part of the landfill Cover Design, conduct a leachate evaluation study. The purpose of the leachate study will be to determine the following: ▪ Estimate the quantity of leachate by installing piezometers within the waste mass. ▪ Determine the effect of the updated cover on minimizing the generation of leachate (to include using the HELP model). ▪ Estimate a water balance for leachate at the site. Based on the above information, a leachate evaluation report will be written and submitted with the prefinal design documents. This report will discuss if engineering controls may be required, and if required, the types of controls and the potential timeframe for installing these controls.	**Completed** as these items were included in the prefinal design documents submitted in July 1999, and the approved Final Remedial Design submitted to the KDWM on October 11, 1999, and approved on October 29, 1999. During the 5 years of operation and maintenance at the site, the leachate levels have decreased. In addition, no impacts from the leachate were observed during the site inspections that were conducted as part of the operation and maintenance activities.
The Remedial Design will include a groundwater monitoring program as part of the Operation and Maintenance Plan to assess the effectiveness of remedial action.	**Completed** as the Operations, Maintenance, and Monitoring Plan was included as Appendix G of the approved Remedial Design.

Agreed Order Termination Requirements (continued)
Red Penn Landfill - Pewee Valley, Kentucky

REQUIREMENTS OF THE SCOPE OF WORK	
ACTION REQUIRED	ACTION TAKEN
Upon completion of the remedial action, collect and analyze samples from the five springs and the three monitoring wells on a semiannual basis for 5 years. At the completion of 5 years, the data will be evaluated to determine if continued monitoring is necessary. Prepare a Groundwater Monitoring Plan, outlining the methods, procedures, and quality control measures to be used to implement the groundwater program. The Groundwater Monitoring Plan will include a Health and Safety Plan and a Field Sampling and Analysis Plan for the collection, sampling, field filtering, and analyses associated with groundwater monitoring. Sampling and analysis procedures for the water located in the leachate ponds and the ponded surface water on the landfill will also be included in the Groundwater Monitoring Plan. The Groundwater Monitoring Plan will be submitted to the KDWM as part of the Prefinal and Final Design.	**Completed** as samples were collected and analyzed in accordance with the approved Post-Construction Performance Standards Verification Plan (Section 3 of the Final Remedial Design); the OM&M Plan; and revisions to these plans as approved by the Kentucky Department of Environmental Protection, dated April 2, 2003. A Groundwater Monitoring Plan was included in the Final Remedial Design submitted and approved by the KDWM on October 11, 1999, and October 29, 1999, respectively.

Additional Requirements Requested by the KDWM
Red Penn Landfill - Pewee Valley, Kentucky

ADDITIONAL REQUIREMENTS REQUESTED	
ACTION REQUIRED	ACTION TAKEN
Prior to the 5-Year Review Report being accepted, the following items need to be addressed, as stated in the February 26, 2007, letter from the KDWM: ▪ The Biological Study must be addressed as in the original documents. ▪ The Deep Aquifer must be sampled off-site as in the original documents. ▪ An Environmental Covenant (EC) signed by the owner(s) of the property must be registered at the Oldham County Courthouse as per our Office of Legal Services. ▪ The 5-Year Inspection and walk-over of the site by the interested parties must occur after the EC has been registered, and must include a representative of KDWM.	▪ The Biological Study has been addressed in this revised 5-Year Review Report. ▪ The Deep Aquifer was sampled on April 19, 2007; and the results are contained in this revised 5-Year Review Report (Appendix E). ▪ A signed Environmental Covenant that was registered at the Oldham County Court on June 30, 2008, has been included in this document. ▪ The First 5-Year final landfill inspection was conducted on April 23, 2008. ▪ The Second 5-Year Review was completed and submitted to the KDWM in December 2010.

Additional Requirements Requested by the KDWM
Red Penn Landfill - Pewee Valley, Kentucky

ADDITIONAL REQUIREMENTS REQUESTED	
ACTION REQUIRED	**ACTION TAKEN**
In a letter dated November 6, 2008, KDWM determined the following as part of the acceptance of the first 5-Year Review Report: ▪ Yearly monitoring and site mowing may be discontinued. ▪ The site access must continue to be controlled by means of a locked gate. ▪ The property owner must provide annual certification in the form of a letter that the condition of the site has not changed. The letter will describe all changes made at the site, if any. The letter will be due on January 30 of each year. ▪ The next 5-year review will be due on January 30, 2011. This will be the responsibility of the original PRPs listed in the Agreed Order. It will include a round of groundwater sampling (the three wells and five springs), a description of the condition of the landfill cover and site access controls, and a brief site walkover with personnel from KDWM Superfund Branch. ▪ The OM&M Plan needed to be updated to reflect these changes.	▪ The site access continues to be controlled by a locked gate. A new gate was installed in 2010. ▪ The property owner has provided annual certification in the form of a letter to KDWM that indicates the condition of the site. ▪ The PRPs completed the second 5-year review and submitted it to KDWM prior to January 30, 2011. ▪ The PRPs revised the OM&M Plan to reflect the changes at the site and submitted a final revised document to KDWM on March 10, 2009.

Based on the conclusions stated above, the PRP Group has completed all the requirements of the Agreed Order and the additional requirements discussed in the February 26, 2007, and November 6, 2008, letters from KDWM to the PRPs. However, as stated in the November 6, 2008, letter, the KDWM has determined that due to the continued presence of waste at the site, additional 5-year reviews will be necessary and that the Agreed Order cannot be terminated. Assuming the requirement continues, the Third 5-Year Review will be due on January 30, 2016. As discussed in this 5-Year Review, the site is in compliance with all the requirements of the 1999 Agreed Order.

Table 1
List of Contractors Performing OM&M
Red-Penn Landfill
Peewee Valley, Kentucky

CONTRACTOR	O&M DUTIES
RMT, Inc.	General OM&M and reporting
EnChem Laboratories (2001) and Test America (formerly known as Severn Trent Laboratories) (2002 through 2010)	Environmental sample analyses
Simply Natural Landscape Consulting	Landscaping
Martin Landscaping, Inc.	Landscaping and mowing
American Drilling Services	Leachate head well abandonment

Table 2
Post-Construction Performance Standards Verification Plan
Red-Penn Landfill
Peewee Valley, Kentucky

TASK	FREQUENCY	PARAMETERS
I. Groundwater Monitoring[1]		
Collect samples at MW-6, MW8002-8975, MW8002-8979, and Springs #1 through #5[2].	▪ Every 5 years[3]	Observe and compare concentrations of benzene; chlorobenzene; chloroethane; cis-1,2-dichloroethene; PCBs[4]; cyanide (total); antimony; arsenic; barium; cadmium; chromium; lead; and nickel with previous monitoring results.
II. Land Surface Care		
Inspect final cover, site condition, and access points.	▪ Every 5 years[3]	Note visual evidence of exposed waste, vandalism, etc.

Footnotes:
(1) The locations of the monitoring points are shown on Figure 2.
(2) The five springs at the site have been given identification numbers as follows:
Spring #1 – Thibocillis Spring
Spring #2 – Fairlane 500 Spring
Spring #3 – Garbage Spring
Spring #4 – Pond seep area
Spring #5 – Bedding plane spring
(3) In accordance with the November 6, 2008, letter from KDWM and the revised Sampling and Analysis Plan.
(4) The following PCB Aroclors were analyzed: 1016, 1221, 1232, 1242, 1248, 1254, and 1260.

21-May-02	709.35	24.02	685.33	675.30	10.03
08-Aug-02	709.35	23.98	685.37	675.30	10.07
18-Nov-02	709.35	23.99	685.36	675.30	10.06
25-Mar-03	709.35	24.14	685.21	675.30	9.91
29-Oct-03	709.35	26.47	682.88	675.30	7.58
21-Apr-04	709.35	28.30	681.05	675.30	5.75
13-Oct-04	709.35	27.60	681.75	675.30	6.45
14-Apr-05	709.35	30.30	679.05	675.30	3.75
11-Oct-05	709.35	31.35	678.00	675.30	2.70

Footnotes:

(1) Bottom of PVC screen is approximately 1 foot above the base of the landfill.

(2) Leachate head well LH-3 was initially dry when the well was completed. The depth of leachate in LH-3 on May 6, 1999, was measured 24 hours after the completion of LH-3, in accordance with the Leachate Head Well Installation Workplan; however, the leachate level was still rising at the time of the measurement. Therefore, it is not believed that this was a representative leachate head level.

(3) The actual depth of leachate below the top of the PVC casing was recorded as 27.00 ft and 27.10 ft. The leachate head well depth is 26.91 ft; thus, it is assumed that water was present at the bottom of the well in the end cap and the measurement contained a small amount of error.

Footnotes:
(1) Bottom of PVC screen is approximately 1 foot above the base of the landfill.
(2) Leachate head well LH-3 was initially dry when the well was completed. The depth of leachate in LH-3 on May 6, 1999, was measured 24 hours after the completion of LH-3, in accordance with the Leachate Head Well Installation Workplan; however, the leachate level was still rising at the time of the measurement. Therefore, it is not believed that this was a representative leachate head level.
(3) The actual depth of leachate below the top of the PVC casing was recorded as 27.00 ft and 27.10 ft. The leachate head well depth is 26.91 ft; thus, it is assumed that water was present at the bottom of the well in the end cap and the measurement contained a small amount of error.

Annual Reports in Electronic Format

April 10, 2002

Ms. Susan Mallette
Geologist
Kentucky Division of Waste Management
18 Reilly Road
Frankfort, KY 40601

Subject: Red Penn Landfill, Pewee Valley, Kentucky
Year 2001 Annual OM&M Report

Dear Susan:

This letter report presents the results of the first year (2001) of post-construction operation, maintenance, and monitoring (OM&M) activities at the Red Penn Landfill. The quarterly OM&M activities, which included groundwater sampling, leachate head monitoring, and site inspection, were performed in accordance with the Post-Construction Performance Standards Verification Plan (Section 3 of the Final Remedial Design [RMT, October 1999]), and the Operation, Monitoring, and Maintenance Plan (Appendix G of the Final Remedial Design).

Operation, maintenance, and monitoring activities were conducted in February, May, August, and November 2001 and consisted of the following activities:

- Sampling three groundwater monitoring wells
- Sampling five surface water springs
- Measuring the levels in three leachate head wells
- Conducting site inspections

As will be discussed below, not all of the groundwater monitoring wells and springs could be sampled during each monitoring event, because some were dry when the OM&M activities were conducted.

Groundwater and Spring Monitoring Results

The groundwater and spring samples were analyzed for VOCs, PCBs, metals, and total cyanide, as specified in the OM&M Plan (the locations of the monitoring points are shown on Figure 1). At the time of the OM&M activities, the following groundwater monitoring wells and springs could not be sampled because they were either dry (springs and wells) or the water did not recharge within a reasonable amount of time after being bailed dry (wells):

May	September	December
MW-8002-8975	MW-8002-8975	MW-8002-8975
MW-8002-8979	MW-8002-8979	MW-8002-8979
Spring #2	Spring #2	
	Spring #5	

No VOCs, PCBs, or total cyanide were detected in any of the water samples, with the exception of benzene in MW-8002-8979 in February and total cyanide at Spring #3 in May and August. Benzene was detected at a concentration of 1.1 µg/L and total cyanide was detected at a concentration of 0.012 mg/L. These concentrations are just above their associated Estimated Quantitation Limit. The laboratory reports and a summary report, with data validation flags (when applicable), are contained in Appendix A.

Metals were detected in the following ranges during the 2001 monitoring activities, in at least one monitoring well or surface water sample:

METAL	MINIMUM CONCENTRATION (µg/L)	MAXIMUM CONCENTRATION (µg/L)	FREQUENCY OF DETECTION ABOVE THE EQL
Antimony	< 10	< 10	0/23
Arsenic	< 10	11	1/23
Barium	24	530	23/23
Cadmium	< 1.0	2.3	3/23
Chromium	< 3.0	35	9/23
Lead	< 5.0	22	5/23
Nickel	< 5.0	52	15/23

Figures 2 through 7 show the metals that were detected in the groundwater and surface water samples at levels higher than the Estimated Quantitation Limit. These figures show the time trends for the following parameters: arsenic, barium, cadmium, chromium, lead, nickel, and total cyanide.

Leachate Head Levels

The pre- and post-construction leachate head data are presented in Table 1 and graphed on Figure 8. Placement of the low-permeability geosynthetic clay liner (GCL) portion of the final cover began on August 3, 2000, and was completed on September 20, 2000. The initial leachate head data indicate that the placement of the final cover has decreased surface water infiltration and has reduced the leachate head levels. Leachate head level trends will be evaluated following the 5-year post-construction monitoring period, as required in the Final Remedial Design.

Site Inspections

Site inspection activities include inspecting the final cover and performing maintenance or repairs as necessary for the following items:

- Surface water controls (*e.g.*, diversion berms and the spillway)
- Cover (*e.g.*, vegetation, erosion, settlement, and burrowing animals)
- Groundwater and leachate monitoring wells

- Site access control

A summary of the maintenance and repairs performed during 2001 is included in Table 2. The quarterly facility inspection reports are included in Appendix B. Many of the maintenance items that were identified during the 2001 inspections were either addressed during the same site visit as the inspection in which they were identified, or during the next site visit, while other maintenance items had to be scheduled for spring or summer 2002, when the cover can support truck traffic without rutting the cover soil.

Please call me, at (608) 662-5271, if you have any questions regarding this report.

Sincerely,

RMT, Inc.

Michael J. Amstadt P.E.
Project Manager

15-Sep-99	704.49	14	690.49	677.58	12.91
12-Aug-00	704.49	19.4	685.09	677.58	7.51
29-Aug-00	704.49	19.5	684.99	677.58	7.41
26-Sep-00	704.49	20.4	684.09	677.58	6.51
28-Feb-01	704.49	22.39	682.10	677.58	4.52
4-May-01	704.49	22.06	682.43	677.58	4.85
21-Aug-01	704.49	22.92	681.57	677.58	3.99
27-Nov-01	704.49	23.12	681.37	677.58	3.79

Note:
(1) Bottom of PVC screen is approximately 1 foot above the base of the landfill.
(2) Leachate head well LH-3 was initially dry when the well was completed. The depth of leachate in LH-3 on May 6, 1999, was measured 24 hours after the completion of LH-3, in accordance with the Leachate Head Well Installation Workplan; however, the leachate level was still rising at the time of the measurement. Therefore, it is not believed that this was a representative leachate head level.

Table 2
Red Penn Landfill
Pewee Valley, Kentucky
Status of Maintenance Items

Item	Description of Maintenance Item	Date Identified	Date Repair/ Maintenance Completed	Scheduled Date for Repair
1	Erosion is noted along the site access road.	2/23/01	5/01	
2	Silt fence needs to be replaced in some areas.	2/23/01	6/01	
3	The areas of sparse vegetation on the final cover need reseeding.	8/21/01	9/01	
4	Erosion of the final cover (along the sideslopes of the cap in the northwestern area west of LH-1, in the area south of Spring #4, and in the area north of Spring #3).	8/21/01		Spring 2002
5	Erosion along the northern side of the diversion berm (closest to Springs #2 and #3).	8/21/01		Spring 2002
6	Erosion along the northern side of the main entrance road. This portion of the road has eroded next to riprap, leaving the geotextile exposed.	8/21/01	11/01	
7	The lock on well LH-2 was corroded. (It was replaced with Master Lock 0536.) This lock will be replaced with a standard Waste Management lock.	8/21/01	8/21/01	
8	A new Waste Management master lock was placed on the entrance gate.	8/21/01	8/21/01	
9	The PVC riser in LH-1 needs to be cut so that the protective casing can be closed and locked.	11/27/01	1/02	
10	Some areas in the final cover require reseeding to re-establish vegetative cover.	11/27/01		Spring 2002

Organic Data Qualifier Sheet

B	Analyte is present in the method blank(See Form3). Method blank criteria is evaluated to the laboratory LOD. Additionally, method blank acceptance may be based on project specific criteria or determined from analyte concentrations in the sample and are evaluated on a sample by sample basis.
C	Elevated detection limit (see Sample Narrative).
D	Analyte value from diluted analysis.
DL	No surrogate recovery available due to sample dilution.
E	Analyte concentration exceeds calibration range (see Sample Narrative).
F	Repeated surrogate failure (see Sample Narrative).
G	Sample exhibits hydrocarbon pattern resembling gasoline.
H(n)	Analysis performed "n" days past holding time.
J	Qualitative evidence of analyte present: concentration detected is greater than the method detection limit but less than the reporting limit.
K	Detection Limit may be elevated due to the presence of an unrequested analyte (see Sample Narrative).
L	Detects in trip blank.
M	Methanol leakage.
ND	Not Detected.
NR	Not Required.
P	The relative percent difference for detected concentrations between the two GC columns was greater than 40 % difference.
Q	The analyte has been detected between the Limit of Detection (LOD) and limit of Quantitation (LOQ). The results are qualified due to the uncertainty of analyte concentrations within this range.
U#	Elevated LOD due to matrix interference.
V	Heavy hydrocarbon present.
W	Sample received with headspace.
X	See Sample Narrative
Z	See Sample Narrative
SUB	Assay was subcontracted to an approved lab.

SAMPLE NARRATIVE

PROJECT NAME	:	RED PENN
WORKORDER NUMBER	:	910520
DATE	:	03/05/01

PCB's: Sample 910520-003 had a TCX surrogate recovery below QC limits. There was no sample remaining for re-extraction.

Site Inspection Reports

Red-Penn Landfill

Inspection Report

Date: February 23, 2001

Temperature: 35°F

Inspector: MG Zoellner

Weather: Sunny

Ground Conditions: Moist

Item	Adequate	Requires Maintenance	Comments/Observations
Final Cover			
Vegetation	X		
Erosion		X	Erosion is evident along site access road.
Burrowing animals	X		
Settlement	X		
Other		X	The silt fence needs to be replaced in some areas.
Surface Water Controls			
Diversion berms	X		
Final cover spillway	X		There is some sediment buildup in riprap; however, the riprap is functioning properly.
Other	X		There is some water on the southeastern corner of the landfill, south of Spring #4, due to wet weather. No maintenance is necessary.
Groundwater and Leachate Head Wells			
Locks	X		
Structural integrity	X		Settlement around the LH-1 has caused the PVC casing to come in contact with the protective cover, however, the cover can still be closed and locked.
Entrance Gate and Lock	X		

Red-Penn Landfill

Inspection Report

Date: May 4, 2001

Temperature: 50's°F

Inspector: Matt G. Zoellner/ W. Lew Ditto

Weather: Sunny

Ground Conditions: Dry, except where noted.

Item	Adequate	Requires Maintenance	Comments/Observations
Final Cover			
Vegetation	X		Areas of the soil cover have been seeded (noted seed on ground) by Martin Landscaping.
Erosion	X		Recent actions (hay bales, and rocks) by Martin Landscaping to reduce erosion near the access road were apparent.
Burrowing animals	X		
Settlement	X		
Other			
Surface Water Controls			
Diversion berms	X		
Final cover spillway	X		There is some sediment buildup in the riprap. The riprap is functioning properly.
Other	X		There is some standing water on the southeastern corner of the landfill, south of Spring #4 due to wet weather. No maintenance is necessary.
Groundwater and Leachate Head Wells			
Locks	X		
Structural integrity	X		
Entrance Gate and lock	X		

Red-Penn Landfill

Inspection Report

Date: August 21, 2001

Temperature: 80's°F

Inspector: W. Lew Ditto

Weather: Clear and sunny

Ground Conditions: Dry

Item	Adequate	Requires Maintenance	Comments/Observations
Final Cover(1)			
Vegetation		X	Some areas need reseeding to fill in areas of sparse vegetation.
Erosion		X	Erosion is evident along the sideslopes of the cap in the following areas: northwest of LH-1 has 1-foot gullies; area south of Spring #4 has 6-inch gullies; area north of Spring #3 has 8-inch gullies. Erosion will be repaired during the spring 2002 monitoring period.
Burrowing animals	X		
Settlement	X		
Other	X		Silt fence identified as missing 2/01 was replaced in 6/01.
Surface Water Controls(2)			
Diversion berms		X	Erosion was noted on northern side of the diversion berm closest to Springs #2 and #3. Erosion evident next to riprap approximately 100 feet from final cover spillway. Erosion will be repaired during the spring 2002 monitoring period.
Final cover spillway	X		Silt fence missing in final cover spillway. However, the riprap is controlling drainage and the silt fence does not need to be replaced.
Other		X	Drainage from final cap on the northern side of the main entrance road has eroded the material next to the riprap and has removed riprap from the area, leaving the geotextile exposed.
Groundwater and Leachate Head Wells(3)			
Locks	X		The lock on well LH-2 is corroded (it could not be opened). The lock was removed and replaced with Master Lock 0536. No lock is present on the well located at the northern/northwestern side of the cap next to the gas line right-of-way. This well is not included in the routine monitoring program.
Structural integrity	X		
Entrance Gate and lock(4)	X		Placed new Waste Management Master Lock on gate.

Red-Penn Landfill

Inspection Report

Date: November 27, 2001

Temperature: 50's°F

Inspector: Lew Ditto

Weather: Cloudy, overcast, rain yesterday

Ground Conditions: Wet, soft, some standing water

Item	Adequate	Requires Maintenance	Comments/Observations
Final Cover			
Vegetation		X	The areas identified in the August 2001 inspection report were seeded in September 2001. Some areas still need to be seeded to establish vegetative cover.
Erosion		X	Because of the soft soil conditions, the inspection was limited to areas that could be observed while walking to the sampling points. Erosion was noted along the sideslopes of the cap in the following areas: the area south of Spring #4 had 6-inch gullies, and the area north of Spring #3 had 8-inch gullies. Erosion will be repaired during the spring 2002 monitoring period.
Burrowing animals	X		
Settlement	X		
Other			
Surface Water Controls			
Diversion berms		X	Erosion was noted on the northern side of the diversion berm closest to Springs #2 and #3. Erosion is next to riprap approximately 100 feet from the final cover spillway. Erosion will be repaired during the spring 2002 monitoring period.
Final cover spillway	X		
Other	X		Work has been completed to control erosion where sheet flow from the cap flows on the northern side of the entrance road. Riprap was restored to the area.
Groundwater and Leachate Head Wells			
Locks		X	The lock on leachate well LH-1 is bent and unusable. Additionally, the protective casing cannot be locked with the length of PVC extending above the protective casing. Leachate well LH-2 still has an RMT Master Lock 0536. The lock on leachate well LH-3 is highly corroded, but still useable.
Structural integrity		X	Leachate head well LH-1 must be modified. The protective casing cannot be locked due to settlement.
Entrance gate and lock	X

Subject: Red Penn Landfill, Pewee Valley, Kentucky
Year 2002 Annual OM&M Report

Dear Susan:

This letter report presents the results of the second year (2002) of post-construction operation, maintenance, and monitoring (OM&M) activities at the Red Penn Landfill. The quarterly OM&M activities, which included groundwater sampling, leachate head monitoring, and site inspection, were performed in accordance with the Post-Construction Performance Standards Verification Plan (Section 3 of the Final Remedial Design [RMT, October 1999]), and the Operation, Monitoring, and Maintenance Plan (Appendix G of the Final Remedial Design).

Monitoring and site inspection visits were conducted in February, May, August, and November 2002, and consisted of the following activities:

- Sampling three groundwater monitoring wells
- Sampling five surface water springs
- Measuring the liquid levels in three leachate head wells
- Conducting site inspections

As discussed below, not all of the groundwater monitoring wells and surface water springs could be sampled during each quarterly monitoring event, because some were dry when the OM&M activities were conducted.

Groundwater and Spring Monitoring Results

The groundwater and spring samples were analyzed for VOCs, PCBs, metals, and total cyanide, as specified in the OM&M Plan (the locations of the monitoring points are shown on Figure 1). At the time of the OM&M activities, the following groundwater monitoring wells and springs could not be sampled because either they were dry (springs and wells) or the water did not recharge within a reasonable amount of time after being bailed dry (wells):

February	May	August	November
■ Spring #4	■ MW-8002-8975	■ MW-8002-8975[1]	■ MW-8002-8975[1]
■ MW-8002-8979	■ MW-8002-8979	■ MW-8002-8979	■ MW-8002-8979
	■ Spring #4	■ Spring #2	■ Spring #4
		■ Spring #3	
		■ Spring #4	
		■ Spring #5	

Note:
[1] This well recovered only enough to obtain samples for VOC analysis.

No VOCs, PCBs, or total cyanide was detected in any of the water samples, with the exception of benzene at MW-8002-8975 in February and November, and total cyanide at Spring #2 and Spring #3 in November. Benzene was detected at concentrations of 1.2 µg/L (February) and 2.4 µg/L (November), and total cyanide was detected at concentrations of 0.11 mg/L (Spring #2) and 0.011 mg/L (Spring #3). The benzene concentrations and the cyanide concentration of 0.011 mg/L are just above their Estimated Quantitation Limits (EQLs). The cyanide concentration of 0.11 mg/L is at a level higher than has previously been observed; however, this was the only detection in the 40 samples collected over the last 2 years of monitoring. The result from the next monitoring event will be reviewed to assess if an increasing trend for cyanide is occurring at Spring #2. The laboratory reports and a summary report, with data validation flags (as applicable), are contained in Appendix A.

PCBs were initially reported in the Spring #3 sample in November; however, the laboratory suspected that this was the result of laboratory contamination. Therefore another sample was extracted and analyzed for PCBs to verify the original result. PCBs were not detected in the re-extracted sample; however, because the re-extracted sample was extracted past the sample hold time, the data did not meet the laboratories acceptance criterion. Consequently, Spring #3 was resampled in December, and PCBs were not detected in this sample. Because neither the analytical results from the re-extracted laboratory sample nor the confirmation sample indicates the presence of PCBs at Spring #3, the original result for PCBs was most likely the result of laboratory contamination.

The following metals were analyzed during each sampling event: antimony, arsenic, barium, cadmium, chromium, lead, and nickel. The metals that were detected during the 2002 monitoring activities were as follows:

Metal	Minimum Concentration (µg/L)	Maximum Concentration (µg/L)	Frequency of Detection Above the EQL
Barium	39.7	218	17/17
Chromium	< 3.0	5.4	2/17
Nickel	< 5.0	41.0	6/17

Figures 2 through 8 show the time trends for the following parameters: arsenic, barium, cadmium, chromium, lead, nickel, and total cyanide. On Figures 2 through 8, the parameters that were detected in the groundwater samples in 2002 show a stable or downward trend when compared to the results from 2001, with the exception of cyanide at Spring #2. Additional data are needed to assess a potential trend for cyanide at Spring #2.

Leachate Head Levels

The pre- and post-construction leachate head data are presented in Table 1 and graphed on Figure 9. Completion of the final cover occurred in the fall of 2000. The leachate head data indicate that the final cover continues to reduce surface water infiltration into the waste and has significantly reduced the leachate head levels. Leachate head level trends will be evaluated following the 5-year post-construction monitoring period, as required in the Final Remedial Design.

Site Inspections

Site inspection activities included inspecting the final cover and performing maintenance or repairs as necessary for the following items:

- Surface water controls (*e.g.*, diversion berms and the spillway)
- Final cover (*e.g.*, vegetation, erosion, settlement, and burrowing animals)
- Groundwater and leachate monitoring wells
- Site access control

A summary of the maintenance and repair activities performed during 2002 is included in Table 2. The quarterly site inspection reports are included in Appendix B. Many of the maintenance items that were identified during the 2002 inspections were addressed either during the same site visit as the inspection in which they were identified, or during the following site visit. The remaining maintenance items are scheduled for spring or summer 2003, when the final cover can support truck traffic without it causing rutting or other damage to the cover soil.

Please call me, at (608) 662-5271, if you have any questions regarding this report.

Sincerely,

RMT, Inc.

Michael J. Amstadt P.E.
Project Manager

18-Nov-02	704.49	24.66	679.83	677.58	2.25

Note:
(1) Bottom of PVC screen is approximately 1 foot above the base of the landfill.
(2) Leachate head well LH-3 was initially dry when the well was completed. The depth of leachate in LH-3 on May 6, 1999, was measured 24 hours after the completion of LH-3, in accordance with the Leachate Head Well Installation Workplan; however, the leachate level was still rising at the time of the measurement. Therefore, it is not believed that this was a representative leachate head level.

Table 2

Pewee Valley, Kentucky
Status of Maintenance Items

Item	Description of Maintenance Item	Date Identified	Date Repair/ Maintenance Completed	Scheduled Date for Repair
1	Areas of sparse vegetation on the final cover need reseeding. Areas were reseeded.	2/18/02	7/02	_____
2	Erosion of the final cover was noted along the sideslopes in the northwestern area west of LH-1, in the area west of Spring #4, in the area north of Spring #3, and in the vicinity north of both diversion berms. Areas were repaired and reseeded.	2/18/02	7/02	_____
3	The PVC riser at LH-2 needs to be cut so that the protective casing can be closed and locked. The casing has settled around the riser pipe. The riser pipe was cut down to allow the casing to be locked.	2/18/02	8/9/02	_____
4	Some debris was noted outside of the locked entrance gate. The debris was removed.	2/18/02	7/02	_____
5	Erosion ruts are present in the northwestern area of the final cover, in the vicinity of Spring #4, and along the diversion berms. Areas were repaired and reseeded.	5/29/02	7/02	_____
6	Erosion was noted beyond the final cover limits along the eastern side of the landfill.	8/9/02	_____	Spring 2003
7	The locks at LH-1, LH-2, and LH-3 were corroded. All locks were replaced with Waste Management Master Lock #2126.	8/9/02	8/9/02 and 11/19/02	_____
8	Erosion ruts are present in the northwestern area of the final cover, and along the eastern side between Springs #4 and #5.	11/19/02	_____	Spring 2003
9	Some bare areas in the final cover require additional reseeding to re-establish vegetative cover.	11/19/02	_____	Spring 2003
10	Installed 10-foot–long ¾-inch PVC pipe adjacent to LH-1, LH-2 and LH-3 to facilitate locating wells more easily.	8/9/02	11/19/02	_____
11	Vehicle tire rutting on surface of final cover was noted.	11/19/02	_____	Spring 2003

RE: Analytical Results A02-1607

Dear Mr. Amstadt:

Please find enclosed analytical results concerning the samples recently submitted by your firm. The pertinent information regarding these analyses is listed below:

Quote #:	NY01-431
Site Name:	Red Penn Landfill
Project Name:	Quarterly Wells & Springs
Matrix:	Groundwater
Samples Received:	02/20/02
Sample Date:	02/18/02

If you have any questions concerning these data, please contact the Program Manager at (716) 691-2600 and refer to the I.D. number listed below. It has been our pleasure to provide Waste Management, Inc. with environmental testing services. We look forward to serving you in the future.

Sincerely,

STL Buffalo

Amy Haag

Amy L. Haag
Program Manager

I.D. #A02-1607
#NY2A8892

This report contains 40 pages which are individually numbered.

METHODOLOGY

The specific methodology employed in obtaining the enclosed analytical results are indicated on the specific data table. The method number presented refers to the following U.S. Environmental Protection Agency reference:

- "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods" (SW-846), Third Edition, Update III, December 1996, U.S. Environmental Protection Agency Office of Solid Waste.

COMMENTS

The enclosed data has been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Sample dilutions were performed for Method 8260 as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

The cooler was received at a temperature of 3°C.

No deviations from protocol were encountered for Method 8082, Metals, or Wet Chemistry analyses.

Deviations from protocol were encountered for the following:

METHOD 8260

Sample MW8002-8975 exhibited surrogate recovery results above quality control limits for p-Bromofluorobenzene. However, the sample was compliant for all other surrogates.

The Method Blank, VBLK33 exhibited results below the reporting limit for Chlorobenzene. All affected samples will be indicated with a "B" qualifier.

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

DATA COMMENT PAGE

ORGANIC DATA QUALIFIERS

ND or U	Indicates compound was analyzed for, but not detected.
J	Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed, or when the data indicates the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit but greater than zero.
C	This flag applies to pesticide results where the identification has been confirmed by GC/MS.
B	This flag is used when the analyte is found in the associated blank, as well as in the sample.
E	This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at the secondary dilution factor.
N	Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds, where the identification is based on the Mass Spectral library search. It is applied to all TIC results.
P	This flag is used for a pesticide/Aroclor target analyte when there is greater than 25% difference for detected concentrations between the two GC columns. The lower of the two values is reported on the data page and flagged with a "P".
A	This flag indicates that a TIC is a suspected aldol-condensation product.
1	Indicates coelution.
*	Indicates analysis is not within the quality control limits.

INORGANIC DATA QUALIFIERS

ND or U	Indicates element was analyzed for, but not detected. Report with the detection limit value.
J or B	Indicates a value greater than or equal to the instrument detection limit, but less than the quantitation limit.
N	Indicates spike sample recovery is not within the quality control limits.
K	Indicates the post digestion spike recovery is not within the quality control limits.
S	Indicates value determined by the Method of Standard Addition.
M	Indicates duplicate injection results exceeded quality control limits.
W	Post digestion spike for Furnace AA analysis is out of quality control limits (85-115%) while sample absorbance is less than 50% of spike absorbance.
E	Indicates a value estimated or not reported due to the presence of interferences.
H	Indicates analytical holding time exceedance. The value obtained should be considered an estimate.
*	Indicates analysis is not within the quality control limits.
+	Indicates the correlation coefficient for the Method of Standard Addition is less than 0.995.

NON-CONFORMANCE SUMMARY

Job#: A02-5155

STL Project#: NY2A8892
Site Name: Red Penn Landfill

General Comments

The enclosed data have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual and Dissolved Oxygen analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A02-5155
Sample Cooler(s) were received at the following temperature(s); 4°C.

GC/MS Volatile Data

No deviations from protocol were encountered during the analytical procedures.

GC Extractable Data

The recovery of surrogate Decachlorobiphenyl for the Method 8082 analysis of sample Spring #3 was outside of established quality control limits. The recovery of surrogate Tetrachloro-m-xylene was within quality control limits, no corrective action was required.

Metals Data

No deviations from protocol were encountered during the analytical procedures.

Wet Chemistry Data

No deviations from protocol were encountered during the analytical procedures.

****

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

Dilution Log W/Code Information
For Job A02-5155

Client Sample ID	Lab Sample ID	Parameter (Inorganic)/Method (Organic)	Dilution	Code
Spring #3	A2515505	8260	10.00	003
Spring #3	A2515505MS	8260	10.00	003
Spring #3	A2515505SD	8260	10.00	003

000004

Dilution Code Definition:

002 - sample matrix effects
003 - excessive foaming
004 - non-target compounds (TICS) exceeded 5X the total response of one of the Internal Standards
005 - sample matrix resulted in method non-compliance for an Internal Standard
006 - sample matrix resulted in method non-compliance for Surrogate
007 - nature of the TCLP matrix
008 - high concentration of target analyte(s)
009 - sample turbidity
010 - sample color
011 - insufficient volume for lower dilution
012 - sample viscosity
013 - other

DATA COMMENT PAGE

ORGANIC DATA QUALIFIERS

ND or U Indicates compound was analyzed for, but not detected.

J Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed, or when the data indicates the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit but greater than zero.

C This flag applies to pesticide results where the identification has been confirmed by GC/MS.

B This flag is used when the analyte is found in the associated blank, as well as in the sample.

E This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.

D This flag identifies all compounds identified in an analysis at the secondary dilution factor.

N Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds, where the identification is based on the Mass Spectral library search. It is applied to all TIC results.

P This flag is used for a pesticide/Aroclor target analyte when there is greater than 25% difference for detected concentrations between the two GC columns. The lower of the two values is reported on the data page and flagged with a "P".

A This flag indicates that a TIC is a suspected aldol-condensation product.

1 Indicates coelution.

* Indicates analysis is not within the quality control limits.

INORGANIC DATA QUALIFIERS

ND or U Indicates element was analyzed for, but not detected. Report with the detection limit value.

J or B Indicates a value greater than or equal to the instrument detection limit, but less than the quantitation limit.

N Indicates spike sample recovery is not within the quality control limits.

K Indicates the post digestion spike recovery is not within the quality control limits.

S Indicates value determined by the Method of Standard Addition.

M Indicates duplicate injection results exceeded quality control limits.

W Post digestion spike for Furnace AA analysis is out of quality control limits (85-115%) while sample absorbance is less than 50% of spike absorbance.

E Indicates a value estimated or not reported due to the presence of interferences.

H Indicates analytical holding time exceedance The value obtained should be considered an estimate.

* Indicates analysis is not within the quality control limits.

+ Indicates the correlation coefficient for the Method of Standard Addition is less than 0.995

NON-CONFORMANCE SUMMARY

Job#: A02-8078

STL Project#: NY2A8892
Site Name: Red Penn Landfill

General Comments

The enclosed data have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual and Dissolved Oxygen analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A02-8078
Sample Cooler(s) were received at the following temperature(s); 2 °C
All samples were received in good condition.

GC/MS Volatile Data

The analyte Chlorobenzene was detected in the Method Blank (VBLK87) at a level below the project established reporting limit. No corrective action is necessary for any values in Method Blanks that are below the requested reporting limits. All samples were non-detect for this analyte.

GC Extractable Data

The recovery of surrogate Decachlorobiphenyl for the Method 8082 (PCB) analysis of sample MW-6 was outside of established quality control limits. The recovery of surrogate Tetrachloro-m-xylene was within quality control limits, no corrective action was required.

Metals Data

No deviations from protocol were encountered during the analytical procedures.

Wet Chemistry Data

No deviations from protocol were encountered during the analytical procedures.

****

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

DATA COMMENT PAGE

ORGANIC DATA QUALIFIERS

ND or U	Indicates compound was analyzed for, but not detected.
J	Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed, or when the data indicates the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit but greater than zero.
C	This flag applies to pesticide results where the identification has been confirmed by GC/MS.
B	This flag is used when the analyte is found in the associated blank, as well as in the sample.
E	This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at the secondary dilution factor.
N	Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds, where the identification is based on the Mass Spectral library search. It is applied to all TIC results.
P	This flag is used for a pesticide/Aroclor target analyte when there is greater than 25% difference for detected concentrations between the two GC columns. The lower of the two values is reported on the data page and flagged with a "P".
A	This flag indicates that a TIC is a suspected aldol-condensation product.
1	Indicates coelution.
*	Indicates analysis is not within the quality control limits.

INORGANIC DATA QUALIFIERS

ND or U	Indicates element was analyzed for, but not detected. Report with the detection limit value.
J or B	Indicates a value greater than or equal to the instrument detection limit, but less than the quantitation limit
N	Indicates spike sample recovery is not within the quality control limits.
K	Indicates the post digestion spike recovery is not within the quality control limits.
S	Indicates value determined by the Method of Standard Addition.
M	Indicates duplicate injection results exceeded quality control limits.
W	Post digestion spike for Furnace AA analysis is out of quality control limits (85-115%) while sample absorbance is less than 50% of spike absorbance.
E	Indicates a value estimated or not reported due to the presence of interferences
H	Indicates analytical holding time exceedance The value obtained should be considered an estimate.
*	Indicates analysis is not within the quality control limits
+	Indicates the correlation coefficient for the Method of Standard Addition is less than 0.995

NON-CONFORMANCE SUMMARY

Job#: A02-B570

STL Project#: NY2A8892
Site Name: Red Penn Landfill

General Comments

The enclosed data have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual and Dissolved Oxygen analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A02-B570
Sample Cooler(s) were received at the following temperature(s); 2@6 °C
All samples were received in good condition.

GC/MS Volatile Data

No deviations from protocol were encountered during the analytical procedures.

GC Extractable Data

For method 8082, the recovery of surrogate Decachlorobiphenyl in samples MW-6 and Spring #3 is outside of established quality control limits. The recovery of surrogate Tetrachloro-m-xylene is within quality control limits.

For method 8082, samples FLDBLK1102 and Spring #3 were originally analyzed for PCBs within the required holding time, however, the result was not consistent with historical trends and strongly pointed to Preparatory Lab contamination. Re-analysis was performed outside holding time and the non-detect values obtained are more representative of past data. Both sets of data are provided in this data package.

Metals Data

No deviations from protocol were encountered during the analytical procedures.

Wet Chemistry Data

The value obtained for Cyanide on samples Spring #2 and Spring #3 are inconsistent with historical trends. Reanalysis was performed and the values were confirmed. Only the result from the original analysis is provided in this data package.

****

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

Client Sample ID	Lab Sample ID	Parameter (Inorganic)/Method (Organic)	Dilution	Code
Spring #3	A2B57008	8260	10.00	003

Dilution Code Definition:

002 - sample matrix effects
003 - excessive foaming
004 - high levels of non-target compounds
005 - sample matrix resulted in method non-compliance for an Internal Standard
006 - sample matrix resulted in method non-compliance for Surrogate
007 - nature of the TCLP matrix
008 - high concentration of target analyte(s)
009 - sample turbidity
010 - sample color
011 - insufficient volume for lower dilution
012 - sample viscosity
013 - other

DATA COMMENT PAGE

ORGANIC DATA QUALIFIERS

ND or U	Indicates compound was analyzed for, but not detected.
J	Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed, or when the data indicates the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit but greater than zero.
C	This flag applies to pesticide results where the identification has been confirmed by GC/MS.
B	This flag is used when the analyte is found in the associated blank, as well as in the sample.
E	This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at the secondary dilution factor.
N	Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds, where the identification is based on the Mass Spectral library search. It is applied to all TIC results.
P	This flag is used for a pesticide/Aroclor target analyte when there is greater than 25% difference for detected concentrations between the two GC columns. The lower of the two values is reported on the data page and flagged with a "P".
A	This flag indicates that a TIC is a suspected aldol-condensation product.
1	Indicates coelution.
*	Indicates analysis is not within the quality control limits.

INORGANIC DATA QUALIFIERS

ND or U	Indicates element was analyzed for, but not detected. Report with the detection limit value.
J or B	Indicates a value greater than or equal to the instrument detection limit, but less than the quantitation limit.
N	Indicates spike sample recovery is not within the quality control limits.
K	Indicates the post digestion spike recovery is not within the quality control limits.
S	Indicates value determined by the Method of Standard Addition.
M	Indicates duplicate injection results exceeded quality control limits.
W	Post digestion spike for Furnace AA analysis is out of quality control limits (85-115%) while sample absorbance is less than 50% of spike absorbance.
E	Indicates a value estimated or not reported due to the presence of interferences.
H	Indicates analytical holding time exceedance. The value obtained should be considered an estimate.
*	Indicates analysis is not within the quality control limits.
+	Indicates the correlation coefficient for the Method of Standard Addition is less than 0.995.

NON-CONFORMANCE SUMMARY

Job#: A02-B570

STL Project#: NY2A8892
Site Name: Red Penn Landfill

General Comments

The enclosed data have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual and Dissolved Oxygen analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A02-B570
Sample Cooler(s) were received at the following temperature(s); 2@6 °C
All samples were received in good condition.

GC/MS Volatile Data

No deviations from protocol were encountered during the analytical procedures.

GC Extractable Data

For method 8082, the recovery of surrogate Decachlorobiphenyl in samples MW-6 and Spring #3 is outside of established quality control limits. The recovery of surrogate Tetrachloro-m-xylene is within quality control limits.

For method 8082, samples FLDBLK1102 and Spring #3 were originally analyzed for PCBs within the required holding time, however, the result was not consistent with historical trends and strongly pointed to Preparatory Lab contamination. Re-analysis was performed outside holding time and the non-detect values obtained are more representative of past data. Both sets of data are provided in this data package.

Metals Data

No deviations from protocol were encountered during the analytical procedures.

Wet Chemistry Data

The value obtained for Cyanide on samples Spring #2 and Spring #3 are inconsistent with historical trends. Reanalysis was performed and the values were confirmed. Only the result from the original analysis is provided in this data package.

****

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

Client Sample ID	Lab Sample ID	Parameter (Inorganic)/Method (Organic)	Dilution	Code
Spring #3	A2B57008	8260	10.00	003

Dilution Code Definition:

002 - sample matrix effects
003 - excessive foaming
004 - high levels of non-target compounds
005 - sample matrix resulted in method non-compliance for an Internal Standard
006 - sample matrix resulted in method non-compliance for Surrogate
007 - nature of the TCLP matrix
008 - high concentration of target analyte(s)
009 - sample turbidity
010 - sample color
011 - insufficient volume for lower dilution
012 - sample viscosity
013 - other

DATA COMMENT PAGE

ORGANIC DATA QUALIFIERS

ND or U	Indicates compound was analyzed for, but not detected.
J	Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed, or when the data indicates the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit but greater than zero.
C	This flag applies to pesticide results where the identification has been confirmed by GC/MS.
B	This flag is used when the analyte is found in the associated blank, as well as in the sample.
E	This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at the secondary dilution factor.
N	Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds, where the identification is based on the Mass Spectral library search. It is applied to all TIC results.
P	This flag is used for a pesticide/Aroclor target analyte when there is greater than 25% difference for detected concentrations between the two GC columns. The lower of the two values is reported on the data page and flagged with a "P".
A	This flag indicates that a TIC is a suspected aldol-condensation product.
1	Indicates coelution.
*	Indicates analysis is not within the quality control limits.

INORGANIC DATA QUALIFIERS

ND or U	Indicates element was analyzed for, but not detected. Report with the detection limit value.
J or B	Indicates a value greater than or equal to the instrument detection limit, but less than the quantitation limit.
N	Indicates spike sample recovery is not within the quality control limits.
K	Indicates the post digestion spike recovery is not within the quality control limits.
S	Indicates value determined by the Method of Standard Addition.
M	Indicates duplicate injection results exceeded quality control limits.
W	Post digestion spike for Furnace AA analysis is out of quality control limits (85-115%) while sample absorbance is less than 50% of spike absorbance.
E	Indicates a value estimated or not reported due to the presence of interferences.
H	Indicates analytical holding time exceedance. The value obtained should be considered an estimate.
*	Indicates analysis is not within the quality control limits.
+	Indicates the correlation coefficient for the Method of Standard Addition is less than 0.995.

NON-CONFORMANCE SUMMARY

Job#: A02-C737

STL Project#: NY2A8892
Site Name: Red Penn Landfill

General Comments

The enclosed data have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual and Dissolved Oxygen analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A02-C737
Sample Cooler(s) were received at the following temperature(s); 2 °C
All samples were received in good condition.

GC Extractable Data

No deviations from protocol were encountered during the analytical procedures.

****

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

DATA COMMENT PAGE

ORGANIC DATA QUALIFIERS

ND or U	Indicates compound was analyzed for, but not detected.
J	Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed, or when the data indicates the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit but greater than zero.
C	This flag applies to pesticide results where the identification has been confirmed by GC/MS.
B	This flag is used when the analyte is found in the associated blank, as well as in the sample.
E	This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at the secondary dilution factor.
N	Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds, where the identification is based on the Mass Spectral library search. It is applied to all TIC results.
P	This flag is used for a pesticide/Aroclor target analyte when there is greater than 25% difference for detected concentrations between the two GC columns. The lower of the two values is reported on the data page and flagged with a "P".
A	This flag indicates that a TIC is a suspected aldol-condensation product.
1	Indicates coelution.
*	Indicates analysis is not within the quality control limits.

INORGANIC DATA QUALIFIERS

ND or U	Indicates element was analyzed for, but not detected. Report with the detection limit value.
J or B	Indicates a value greater than or equal to the instrument detection limit, but less than the quantitation limit.
N	Indicates spike sample recovery is not within the quality control limits.
K	Indicates the post digestion spike recovery is not within the quality control limits.
S	Indicates value determined by the Method of Standard Addition.
M	Indicates duplicate injection results exceeded quality control limits.
W	Post digestion spike for Furnace AA analysis is out of quality control limits (85-115%) while sample absorbance is less than 50% of spike absorbance.
E	Indicates a value estimated or not reported due to the presence of interferences.
H	Indicates analytical holding time exceedance. The value obtained should be considered an estimate.
*	Indicates analysis is not within the quality control limits.
+	Indicates the correlation coefficient for the Method of Standard Addition is less than 0.995.

Attachment B

2002 Site Inspection Reports

Red-Penn Landfill

Inspection Report

Date: February 18, 2002

Temperature: 30's – 40's °F

Inspector: Lew Ditto

Weather: Clear skies

Ground Conditions: Firm, moist

ITEM	Adequate	Requires Maintenance	COMMENTS/OBSERVATIONS
Final Cover(1)			
Vegetation		X	Some areas need reseeding. This will be scheduled for spring 2002 when ground and conditions are appropriate.
Erosion		X	Erosion was noted in the following areas: along the northwestern sideslopes of the cap, specifically in the area between Springs #4 and #5, the area west of Spring #4, the area north of Spring #3, and the areas north of both diversion berms. Some eroded areas are approximately 12 inches deep. Large rocks (1.5 feet x 0.5 ft) were noted on the surface. Erosion will be repaired in the spring of 2002 when field conditions allow for construction traffic without causing rutting.
Burrowing animals	X		
Settlement	X		Some settlement has occurred around LH-2.
Other			
Surface Water Controls(2)			
Diversion berms		X	Erosion was noted on northern side of both diversion berms north of Springs #2 and #3.
Final cover spillway	X		
Other			
Groundwater and Leachate Head Wells(3)			
Locks	X		
Structural integrity	X		Settlement near leachate well LH-2 has made the protective cover difficult to close. The PVC riser should be cut in the future, when it becomes more difficult to close the protective cover. There is standing water in the protective casing for LH-2.
Entrance Gate and lock(4)	X		Some debris (two large tires, leaves, trash) was noted outside of the locked gate.

Red-Penn Landfill

Inspection Report

Date: May 29, 2002

Temperature: 60's

Inspector: Ethan A. House

Weather: Sunny/Cloudy

Ground Conditions: Moist to dry

ITEM	Adequate	Requires Maintenance	COMMENTS/OBSERVATIONS
Final Cover			
Vegetation		X	Bare areas were noted.
Erosion		X	4- to 18-inch deep erosion ruts on the northwestern portion of the cover. 20 to 30-inch deep erosion ruts (off the cover) near Spring #4.
Burrowing animals	X		
Settlement		X	Settlement is apparent in the area around LH-2. See comment below in connection with the locks on the groundwater and leachate wells.
Other			
Surface Water Controls			
Diversion berms		X	Erosion was noted along the diversion berms.
Final cover spillway	X		
Groundwater and Leachate Headwells			
Locks		X	The interior casing in LH-2 is too tall to be capped due to settlement in the area. The protective well casing was locked with the addition of a new Master Lock #0536 to the Waste Management lock on LH-2. The well casing needs to be cut.
Structural integrity	X		
Entrance Gate and Lock	X		

Additional Comments:

Red-Penn Landfill

Inspection Report

Date: August 9, 2002

Temperature: Mid 90s

Inspector: Ethan A. House

Weather: Sunny

Ground Conditions: Firm, dry

ITEM	Adequate	Requires Maintenance	COMMENTS/OBSERVATIONS
Final Cover			
Vegetation	X		Major areas around the perimeter of the cap have recently been seeded and covered with straw.
Erosion		X	Erosion was noted beyond the limits of the landfill, most notably along the eastern side of the landfill near Spring #4.
Burrowing animals	X		
Settlement	X		Settlement was noted at LH-2. The PVC riser was cut to permit locking of the protective casing.
Other			
Surface Water Controls			
Diversion berms	X		
Final cover spillway	X		
Groundwater and Leachate Head Wells			
Locks	X		Replaced all old locks on LH-1, LH-2, and LH-3. LH-1 and LH-2 now have a Waste Management Master Lock #2126. LH-3 has Master Lock #0536, which will be replaced with a Master Lock #2126 during the next site visit.
Structural integrity	X		4 inches of PVC riser were cut off of LH-2 to allow the protective casing to be locked.
Entrance Gate and Lock	X		

Additional Comments: LH-1, 2, and 3 should be marked with a post and flag to ease locating these wells.

Red-Penn Landfill

Inspection Report

Date: November 19, 2002

Temperature: Low 50's

Inspector: Ethan A. House

Weather: Cloudy/Overcast

Ground Conditions: Wet

ITEM	Adequate	Requires Maintenance	COMMENTS/OBSERVATIONS
Final Cover(1)			
Vegetation		X	Bare areas were noted. The seeding that took place in August 2002 has taken root and is doing well.
Erosion		X	Areas of erosion were noted on the eastern and southern side of the landfill. Erosion ruts noticed near Spring #4 are approximately 20-30 inches deep.
Burrowing animals	X		
Settlement	X		
Other		X	Tire ruts are present.
Surface Water Controls(2)			
Diversion berms		X	Erosion wash was noted along the diversion beams; the wash is minimal.
Final cover spillway	X		
Groundwater and Leachate Head Wells(4)	X		Installed 10-foot ¾ inch PVC pipe with a PVC cap next to wells LH-1, 2, and 3 to facilitate locating wells.
Locks	X		New Waste Management Master Lock #2126 was installed on all three leachate head wells (LH-1, 2, and 3).
Structural integrity	X		
Entrance Gate and lock(5)	X

Subject: Red Penn Landfill, Pewee Valley, Kentucky
Year 2003 Annual OM&M Report

Dear Susan:

This letter report presents the results of the third year (2003) of post-construction operation, maintenance, and monitoring (OM&M) activities at the Red Penn Landfill. The semiannual OM&M activities, which included groundwater sampling, leachate head monitoring, and site inspection, were performed in accordance with the Post-Construction Performance Standards Verification Plan (Section 3 of the Final Remedial Design [RMT, October 1999]), the Operation, Monitoring, and Maintenance Plan (Appendix G of the Final Remedial Design), and revisions to these plans approved by the Kentucky Department for Environmental Protection (KDEP) dated April 2, 2003 (refer to Attachment A).

Monitoring was conducted in March and October 2003, and consisted of the following activities:

- Sampling groundwater monitoring wells
- Sampling surface water springs
- Measuring the liquid levels in the leachate head wells

As discussed below, not all of the groundwater monitoring wells and surface water springs could be sampled during each monitoring event, because they were dry when the OM&M activities were conducted. The locations of the monitoring points are shown on Figure 1. Site inspections were conducted in March and November 2003 (refer to Attachment B).

Groundwater and Spring Monitoring Results

The groundwater and spring samples were analyzed for VOCs, PCBs, metals, and total cyanide, as specified in the OM&M Plan. The laboratory reports and a database summary report, with data validation flags, are contained in Attachment C. The following groundwater monitoring wells and springs could not be sampled during the respective monitoring event, either because they were dry, or because the water did not recharge within a reasonable amount of time after being bailed dry.

March 2003	October 2003
▪ MW-8002-8975	▪ Spring #2
▪ MW-8002-8979	▪ Spring #4
▪ Spring #4	

No VOCs, PCBs, or total cyanide was detected in the water samples during 2003, with the exception of cyanide (0.011 mg/L) at Spring #3 in October. The cyanide concentration of 0.011 mg/L was just above the Estimated Quantitation Limits (EQL) of 0.010 mg/L. This is the second time cyanide was detected in Spring #3 (November 2002 at 0.011 mg/L). The result from the next monitoring event will be reviewed to assess if an increasing trend for cyanide is occurring at Spring #3.

The following metals were analyzed during each sampling event: antimony, arsenic, barium, cadmium, chromium, lead, and nickel. The metals that were detected during the 2003 monitoring activities were as follows:

Metal	Minimum Concentration (µg/L)	Maximum Concentration (µg/L)	Frequency of Detection Above the EQL
Arsenic	<10	11.7	1/9
Barium	39.2	364	9/9
Chromium	< 3.0	5.3	1/9
Nickel	< 5.0	41.0	5/9

Figures 2 through 8 show the time trends for the following parameters: arsenic, barium, cadmium, chromium, lead, nickel, and total cyanide. On Figures 2 through 8, the parameters that were detected in the groundwater samples in 2003 show a stable to downward trend when compared with the results from 2001 and 2002, with the exception of barium at Spring #3. The results from the next monitoring event will be reviewed to assess the potential trend of barium at Spring #3.

Leachate Head Levels

The pre- and post-construction leachate head data are presented in Table 1 and graphed on Figure 9. Completion of the final cover occurred in the fall of 2000. The leachate head data indicate that the final cover continues to reduce surface water infiltration into the waste and has significantly reduced the leachate head levels. Leachate head level trends will be evaluated following the 5-year post-construction monitoring period, as required in the Final Remedial Design.

Site Inspections

Site inspection activities included inspecting the final cover and performing maintenance or repairs as necessary for the following items:

- Surface water controls (*e.g.,* diversion berms and the spillway)
- Final cover (*e.g.,* vegetation, erosion, settlement, and burrowing animals)
- Groundwater and leachate monitoring wells
- Site access control

A summary of the maintenance and repair activities performed during 2003 is included in Table 2. The semiannual site inspection report is included in Appendix B. Many of the maintenance items that were identified during the 2003 inspections were addressed either during the same site visit, or during the following site visit. The remaining maintenance items are scheduled for spring or summer 2004, when the final cover can support truck traffic without it causing rutting or other damage to the cover soil.

Please call me, at (608) 662-5271, if you have any questions regarding this report.

Sincerely,

RMT, Inc.

Michael J. Amstadt P.E.
Project Manager

29-Oct-03	709.35	26.47	682.88	675.30	7.58

Notes:
(1) Bottom of PVC screen is approximately 1 foot above the base of the landfill.
(2) Leachate head well LH-3 was initially dry when the well was completed. The depth of leachate in LH-3 on May 6, 1999, was measured 24 hours after the completion of LH-3, in accordance with the Leachate Head Well Installation Workplan; however, the leachate level was still rising at the time of the measurement. Therefore, it is not believed that this was a representative leachate head level.

Correspondence

March 13, 2003

Ms. Susan Mallette
Geologist
Frankfort Office Park
Department of Environmental Protection, Superfund Branch
Division of Waste Management
18 Reilly Road
Frankfort, KY 40601-1190

Subject: Changes to Environmental Monitoring Activities
Red Penn Landfill, Pewee Valley, Kentucky

Dear Ms. Mallette:

On behalf of the PRPs for the Red Penn Landfill in Pewee Valley, Kentucky, RMT is requesting that monitoring wells MW8002-8975 and MW8002-8979 be eliminated from the monitoring program because period of these wells do not recover after being bailed dry to allow for samples to be collected in a reasonable time (24 hours). With the exception of the first time these wells were sampled (in February 2000), MW8002-8975 has not recovered enough to collect any samples in the last 2 years, and MW8002-8979 has recovered enough to only allow a 40 mL sample for VOCs to be collected in about half of the sampling events. Furthermore, the results for the samples from MW8002-8975 and -8979 that have been collected over the last 2 years do not indicate that the groundwater at these locations has been affected by the landfill. We would appreciate if the Kentucky Division of Waste Management (KDWM) could respond to this letter by March 30, so that we can make the necessary arrangements prior to the next sampling event in April.

We are also notifying the KDWM that the PRPs intend to reduce the frequency of environmental monitoring from quarterly to semiannually beginning in April 2003. This reduction in monitoring frequency for groundwater and the springs is consistent with the Final Remedial Design (RMT, Inc., October 1999).

Please call me, at (608) 662-5271, if you have any questions regarding this letter.

Sincerely,

RMT, Inc.

Re: Red Penn Sanitation Company Landfill
Oldham County
Not/Com #20363, Mars # 9326

Dear Mr. Forney:

The Kentucky Division of Waste Management has reviewed the monitoring records and observed the most recent sampling of wells MW-8002-8975 and MW-8002-8979 at the Red Penn Landfill.

According to the records, a sample attempt was made quarterly as required, but only one actual sample was collected from these monitoring wells in the two-year sampling period. This was due to insufficient water volume, apparently because of very slow recharge to the wells.

Therefore, please change the well sampling frequency of MW-8002-8975 and MW-8002-8979 to annual. The next sampling of these two wells will therefore be in March 2004.

Thank you for your continuing cooperation with the maintenance and monitoring of this site. Please continue to notify this office of site activities at least five days prior to the activity. If you have any questions, or to notify me of planned site activities, I may be reached by telephone at (502) 564-6716, extension 263, or by email at susan.mallette@mail.state.ky.us.

Sincerely,

Susan L. Mallette

2003 Site Inspection Reports

Red-Penn Landfill

Inspection Report

Date: March 25, 2003

Temperature: Upper 60's °F

Inspector: Lew Ditto

Weather: Clear skies and then cloudy

Ground Conditions: Moist

ITEM	Adequate	Requires Maintenance	COMMENTS/OBSERVATIONS
Final Cover			
Vegetation		X	Bare areas were noted. Areas that were seeded in the fall of 2002 were doing well.
Erosion		X	Areas of erosion were noted on the attached map, but consist of the following areas: along the northwestern sideslopes of the cap, specifically in the area between Springs #4 and #5, the area west of Spring #4, the area north of Spring #3, and the areas north of both diversion berms. Some eroded areas are approximately 6 to 18 inches deep. Large rocks (1.5 feet x 0.5 ft) were noted on the surface. Erosion will be repaired in the spring or summer of 2003 when field conditions allow for construction traffic without causing rutting.
Burrowing animals	X		
Settlement	X		
Surface Water Controls			
Diversion berms	X		
Final cover spillway	X		
Other			
Groundwater and Leachate Head Wells			
Locks		X	Locks will likely need to be replaced at leachate head wells LH-2 and LH-3 during the next sampling event
Structural integrity		X	Hinged cover is rather corroded.
Entrance Gate and Lock	X		Some debris was noted outside of the locked gate.

Red-Penn Landfill

Inspection Report

Date: November 18, 2003

Temperature: 50 degrees °F

Inspector: Lew Ditto

Weather: Partly Cloudy

Ground Conditions: Dry

ITEM	Adequate	Requires Maintenance	COMMENTS/OBSERVATIONS
Final Cover			
Vegetation		X	An area east of the upper diversion berm is lacking adequate vegetation.
Erosion	X		
Burrowing animals	X		
Settlement	X		
Other	X		
Surface Water Controls			
Diversion berms	X		
Final cover spillway	X		
Groundwater and Leachate Head Wells			
Locks		X	New lock required at LH-3.
Structural integrity	X		
Entrance Gate and lock			
Structural integrity	X		

Additional Comments:

Evidence of vehicle traffic noted in the southwest corner of the site, off the landfill cover area.

NON-CONFORMANCE SUMMARY

Job#: A03-2842

STL Project#: NY2A8892
Site Name: Red Penn Landfill

General Comments

The enclosed data have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual and Dissolved Oxygen analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A03-2842
Sample Cooler(s) were received at the following temperature(s); 2 @ 2.0 °C
All samples were received in good condition.

GC/MS Volatile Data

No deviations from protocol were encountered during the analytical procedures.

GC Extractable Data

For method 8082, the recovery of surrogate Decachlorobiphenyl in samples FLDBLK303 and MW-6 is outside of established quality control limits. The recovery of surrogate Tetrachloro-m-xylene is within quality control limits; no corrective action is required.

For method 8082, the recovery of Aroclor 1260 in the matrix spike and matrix spike duplicate of sample MW-6 exceeds the quality control limits. The recovery of Aroclor 1260 in the matrix spike blank is compliant with quality control limits; no corrective action is indicated.

Metals Data

No deviations from protocol were encountered during the analytical procedures.

Wet Chemistry Data

No deviations from protocol were encountered during the analytical procedures.

11

****

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

Date: 04/11/2003

Dilution Log W/Code Information
For Job A03-2842

Client Sample ID	Lab Sample ID	Parameter (Inorganic)/Method (Organic)	Dilution	Code
Spring #3	A3284206	8260	10.00	003

Dilution Code Definition:

002 - sample matrix effects
003 - excessive foaming
004 - high levels of non-target compounds
005 - sample matrix resulted in method non-compliance for an Internal Standard
006 - sample matrix resulted in method non-compliance for Surrogate
007 - nature of the TCLP matrix
008 - high concentration of target analyte(s)
009 - sample turbidity
010 - sample color
011 - insufficient volume for lower dilution
012 - sample viscosity
013 - other

DATA COMMENT PAGE

ORGANIC DATA QUALIFIERS

ND or U Indicates compound was analyzed for, but not detected at or above the reporting limit.

J Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed, or when the data indicates the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit but greater than zero.

C This flag applies to pesticide results where the identification has been confirmed by GC/MS.

B This flag is used when the analyte is found in the associated blank, as well as in the sample.

E This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.

D This flag identifies all compounds identified in an analysis at the secondary dilution factor.

N Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds, where the identification is based on the Mass Spectral library search. It is applied to all TIC results.

P This flag is used for a pesticide/Aroclor target analyte when there is greater than 25% difference for detected concentrations between the two GC columns. The lower of the two values is reported on the data page and flagged with a "P".

A This flag indicates that a TIC is a suspected aldol-condensation product.

1 Indicates coelution.

* Indicates analysis is not within the quality control limits.

INORGANIC DATA QUALIFIERS

ND or U Indicates element was analyzed for, but not detected at or above the reporting limit.

J or B Indicates a value greater than or equal to the instrument detection limit, but less than the quantitation limit.

N Indicates spike sample recovery is not within the quality control limits.

K Indicates the post digestion spike recovery is not within the quality control limits.

S Indicates value determined by the Method of Standard Addition.

M Indicates duplicate injection results exceeded quality control limits.

W Post digestion spike for Furnace AA analysis is out of quality control limits (85-115%) while sample absorbance is less than 50% of spike absorbance.

E Indicates a value estimated or not reported due to the presence of interferences.

H Indicates analytical holding time exceedance. The value obtained should be considered an estimate.

* Indicates analysis is not within the quality control limits.

+ Indicates the correlation coefficient for the Method of Standard Addition is less than 0.995.

NON-CONFORMANCE SUMMARY

Job#: A03-A518

STL Project#: NY2A8892
Site Name: Red Penn Landfill

General Comments

The enclosed data have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual and Dissolved Oxygen analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A03-A518
Sample Cooler(s) were received at the following temperature(s); 2@2.2 °C
All samples were received in good condition.

GC/MS Volatile Data

No deviations from protocol were encountered during the analytical procedures.

GC Extractable Data

No deviations from protocol were encountered during the analytical procedures.

Metals Data

The analyte Antimony was detected in the Method Blank (A3B1246602) at a level above the project established reporting limit. All samples were non-detect for this analyte, therefore, no corrective action was necessary.

Wet Chemistry Data

No deviations from protocol were encountered during the analytical procedures.

****

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

Dilution Log w/Code Information
For Job A03-A518

Client Sample ID	Lab Sample ID	Parameter (Inorganic)/Method (Organic)	Dilution	Code
Spring #3	A3A51805	8260	10.00	003

Dilution Code Definition:

002 - sample matrix effects
003 - excessive foaming
004 - high levels of non-target compounds
005 - sample matrix resulted in method non-compliance for an Internal Standard
006 - sample matrix resulted in method non-compliance for Surrogate
007 - nature of the TCLP matrix
008 - high concentration of target analyte(s)
009 - sample turbidity
010 - sample color
011 - insufficient volume for lower dilution
012 - sample viscosity
013 - other

DATA COMMENT PAGE

ORGANIC DATA QUALIFIERS

ND or U	Indicates compound was analyzed for, but not detected at or above the reporting limit.
J	Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed, or when the data indicates the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit but greater than zero.
C	This flag applies to pesticide results where the identification has been confirmed by GC/MS.
B	This flag is used when the analyte is found in the associated blank, as well as in the sample.
E	This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at the secondary dilution factor.
N	Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds, where the identification is based on the Mass Spectral library search. It is applied to all TIC results.
P	This flag is used for a pesticide/Aroclor target analyte when there is greater than 25% difference for detected concentrations between the two GC columns. The lower of the two values is reported on the data page and flagged with a "P".
A	This flag indicates that a TIC is a suspected aldol-condensation product.
1	Indicates coelution.
*	Indicates analysis is not within the quality control limits.

INORGANIC DATA QUALIFIERS

ND or U	Indicates element was analyzed for, but not detected at or above the reporting limit.
J or B	Indicates a value greater than or equal to the instrument detection limit, but less than the quantitation limit.
N	Indicates spike sample recovery is not within the quality control limits.
K	Indicates the post digestion spike recovery is not within the quality control limits.
S	Indicates value determined by the Method of Standard Addition.
M	Indicates duplicate injection results exceeded quality control limits.
W	Post digestion spike for Furnace AA analysis is out of quality control limits (85-115%) while sample absorbance is less than 50% of spike absorbance.
E	Indicates a value estimated or not reported due to the presence of interferences.
H	Indicates analytical holding time exceedance. The value obtained should be considered an estimate.
*	Indicates analysis is not within the quality control limits.
+	Indicates the correlation coefficient for the Method of Standard Addition is less than 0.995.

STL-8219 (1002)

January 17, 2005

Ms. Susan Mallette
Geologist
Kentucky Division of Waste Management
18 Reilly Road
Frankfort, KY 40601

Subject: Red Penn Landfill, Pewee Valley, Kentucky
Year 2004 Annual OM&M Report

Dear Susan:

This letter report presents the results for the fourth year (2004) of post-construction operation, maintenance, and monitoring (OM&M) activities at the Red Penn Landfill. The semiannual OM&M activities, which included groundwater sampling, leachate head monitoring, and site inspection, were performed in accordance with the Post-Construction Performance Standards Verification Plan (Section 3 of the Final Remedial Design [RMT, October 1999]); the Operation, Monitoring, and Maintenance Plan (Appendix G of the Final Remedial Design); and revisions to these plans approved by the Kentucky Department for Environmental Protection (KDEP) dated April 2, 2003 (refer to Attachment A). The KDEP was notified of the proposed OM&M activities 5 days prior to the activity, and they were present for a portion of each monitoring event.

Monitoring was conducted in April and October 2004, and consisted of the following activities:

- Sampling groundwater monitoring wells
- Sampling surface water springs
- Measuring the liquid levels in the leachate head wells

As discussed below, not all of the groundwater monitoring wells and surface water springs could be sampled during each monitoring event, because they were dry when the OM&M activities were conducted. The locations of the monitoring points are shown on Figure 1. Site inspections were also conducted in April and October 2004 (refer to Attachment B).

Groundwater and Spring Monitoring Results

The groundwater and spring samples were analyzed for VOCs, PCBs, metals, and total cyanide, as specified in the OM&M Plan. The laboratory reports and a database summary report, with data validation flags, are contained in Attachment C. The following groundwater monitoring wells and springs could not be sampled during the respective monitoring event, either because they were dry, or because the water did not recharge within a reasonable amount of time after being bailed dry (as the OM&M Plan requires the well to be purged).

Wells and Springs Not Sampled in 2004

April 2004	October 2004
■ MW-8002-8979	■ MW-8002-8975 ■ MW-8002-8979 ■ Spring #4 ■ Spring #5

No VOCs, PCBs, or total cyanide was detected in any of the water samples during 2004, with the exception of benzene in groundwater monitoring well MW-8002-8975 in April (0.67 µg/L) and cyanide at Spring #3 in October (0.012 mg/L). The benzene result of 0.67 µg/L was below the Estimated Quantitation Limit (EQL) of 1.0 µg/L, and was "J" flagged by the laboratory. The cyanide result of 0.012 mg/L was just above the EQL of 0.010 mg/L. This is the third time cyanide was detected in Spring #3 (November 2002 at 0.011 mg/L, and October 2003 at 0.11 mg/L). The results from the next monitoring event will be reviewed to assess if the benzene detection at groundwater monitoring well MW-8002-8975 is repeatable (this well is sampled annually) and to look for a potential trend for cyanide concentrations at Spring #3. The laboratory data summary reports, with data validation flags (as applicable), are contained in Attachment C.

The following metals were analyzed for during each sampling event: antimony, arsenic, barium, cadmium, chromium, lead, and nickel. The metals that were detected during the 2004 monitoring activities were as follows:

Metal	Minimum Concentration (µg/L)	Maximum Concentration (µg/L)	Frequency of Detection Above the EQL
Barium	38.9	443	10/10
Cadmium	<1.0	6.3	2/10
Chromium	< 3.0	4.4	1/10
Nickel	< 5.0	39.1	6/10

Figures 2 through 8 show the time trends for the following parameters: arsenic, barium, cadmium, chromium, lead, nickel, and total cyanide. On Figures 2 through 8, the parameters that were detected in the groundwater samples in 2004 show a stable to downward trend when compared with the results from 2001 through 2003, with the possible exception of barium at Spring #3. The results from the next monitoring event will be reviewed to assess the potential trend of barium concentrations at Spring #3. It should be noted that the concentration of barium has fluctuated over time since monitoring commenced in February 2001.

Leachate Head Levels

The pre- and post-construction leachate head data are presented in Table 1 and graphed on Figure 9. The final landfill cover was completed in the fall of 2000. The leachate head data indicate that the final cover continues to reduce surface water infiltration into the waste and has significantly reduced the leachate levels. Leachate head trends will be evaluated following the 5-year post-construction monitoring period, as required in the Final Remedial Design.

Site Inspections

Site inspection activities included inspecting the final landfill cover, and performing maintenance or repairs as necessary, for the following items:

- Surface water controls (*e.g.*, diversion berms and the spillway)
- Final cover (*e.g.*, vegetation, erosion, settlement, and burrowing animals)
- Groundwater and leachate monitoring wells
- Site access control

Site Improvements

In addition to the work required by the Operation, Monitoring, and Maintenance Plan, Waste Management, Inc., and the Ford Motor Company retained the services of Simply Natural, of Louisville Kentucky, to assist in the planting of native plant species in areas outside of the limits of the landfill cover. The purpose of these plantings was to prevent future erosion of areas off of the cover that had previously eroded and were subsequently repaired, and to provide additional wildlife habitat. The plantings consisted of native grasses and 14 different kinds of bushes and trees. Over 200 bushes and trees were planted in the two areas indicated on Figure 1. Attachment D contains Photographic documentation of the plantings.

A summary of the maintenance and repair activities performed during 2004 is included in Table 2. The semiannual site inspection reports are included in Attachment B. The maintenance items that were identified during the 2004 inspections have been addressed.

Please call me, at (608) 662-5271, if you have any questions regarding this report.

Sincerely,

RMT, Inc.

Michael J. Amstadt P.E.
Project Manager

Notes:

(1) Bottom of PVC screen is approximately 1 foot above the base of the landfill.

(2) Leachate head well LH-3 was initially dry when the well was completed. The depth of leachate in LH-3 on May 6, 1999, was measured 24 hours after the completion of LH-3, in accordance with the Leachate Head Well Installation Workplan; however, the leachate level was still rising at the time of the measurement. Therefore, it is not believed that this was a representative leachate head level.

(3) The actual depth of leachate below the top of the PVC casing was recorded as 27.00 ft. The leachate head well depth is 26.91 ft; thus, it is assumed that water was present at the bottom of the well in the end cap and the measurement contained a small amount of error.

Frankfort, KY 40601-1190

Subject: Changes to Environmental Monitoring Activities
Red Penn Landfill, Pewee Valley, Kentucky

Dear Ms. Mallette:

On behalf of the PRPs for the Red Penn Landfill in Pewee Valley, Kentucky, RMT is requesting that monitoring wells MW8002-8975 and MW8002-8979 be eliminated from the monitoring program because period of these wells do not recover after being bailed dry to allow for samples to be collected in a reasonable time (24 hours). With the exception of the first time these wells were sampled (in February 2000), MW8002-8975 has not recovered enough to collect any samples in the last 2 years, and MW8002-8979 has recovered enough to only allow a 40 mL sample for VOCs to be collected in about half of the sampling events. Furthermore, the results for the samples from MW8002-8975 and -8979 that have been collected over the last 2 years do not indicate that the groundwater at these locations has been affected by the landfill. We would appreciate if the Kentucky Division of Waste Management (KDWM) could respond to this letter by March 30, so that we can make the necessary arrangements prior to the next sampling event in April.

We are also notifying the KDWM that the PRPs intend to reduce the frequency of environmental monitoring from quarterly to semiannually beginning in April 2003. This reduction in monitoring frequency for groundwater and the springs is consistent with the Final Remedial Design (RMT, Inc., October 1999).

Please call me, at (608) 662-5271, if you have any questions regarding this letter.

Sincerely,

RMT, Inc.

Michael J. Amstadt, P.E.
Project Manager

2004 Site Inspection Reports

Red-Penn Landfill

Inspection Report

Date: April 21, 2004

Temperature: 60 °F

Inspector: John Leffew

Weather: Rain showers

Ground Conditions: Wet

ITEM	Adequate	Requires Maintenance	COMMENTS/OBSERVATIONS
Final Cover			
Vegetation		X	Vegetation adequate except in noted areas of erosion on the northeastern and northwestern slopes. Reseeded on May 19, 2004.
Erosion		X	Erosion observed on the northeastern and northwestern slopes. Erosion repaired May 19, 2004.
Burrowing animals	X		None observed.
Settlement	X		None observed.
Ground Surface Conditions	X		Conditions wet, but firm.
Surface Water Controls			
Diversion berms	X		All appeared to be in good condition. No build-up of sediment observed.
Final cover spillway	X		Appeared to be in good condition.
Groundwater and Leachate Head Wells			
Locks		X	Locks on LH-2 and LH-3 replaced on April 21, 2004.
Structural integrity	X		Some corrosion on casings.
Entrance Gate and Lock	X		Lock in good condition.
Additional Comments:			Heavy erosion observed off of the final cover near Spring #4. This erosion does not require maintenance as it is outside the limits of the final cover. RMT will continue to monitor.

Red-Penn Landfill

Inspection Report

Date: October 13, 2004

Temperature: 60 °F

Inspector: John Leffew

Weather: Light rain, overcast

Ground Conditions: Wet

ITEM	Adequate	Requires Maintenance	COMMENTS/OBSERVATIONS
Final Cover			
Vegetation	X		Vegetation good. Bare spot on east side.
Erosion	X		No erosion on landfill cover. Erosion noted off of the cover near Spring #4, as previously identified in April 2004.
Burrowing animals	X		None observed.
Settlement	X		None observed.
Ground Surface Conditions	X		Good condition.
Surface Water Controls			
Diversion berms	X		
Final cover spillway	X		No erosion or sediment build-up observed.
Groundwater and Leachate Head Wells			
Locks	X		All wells locked, but the locks were corroded. All three locks were replaced.
Structural integrity	X		Good condition.
Entrance Gate and lock	X		Gate was locked upon arrival.
Additional Comments:

NON-CONFORMANCE SUMMARY

Job#: A04-3685

STL Project#: NY2A8892
Site Name: Red Penn Landfill

General Comments

The enclosed data have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual and Dissolved Oxygen analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A04-3685
Sample Cooler(s) were received at the following temperature(s); 2 @ 2.0 °C
All samples were received in good condition.

GC/MS Volatile Data

No deviations from protocol were encountered during the analytical procedures.

GC Extractable Data

For method 8082, the recovery of surrogate Tetrachloro-m-xylene in sample MW-8002-8975 is outside of established quality control limits due to the sample matrix. The recovery of surrogate Decachlorobiphenyl is within quality control criteria; no corrective action is required.

Metals Data

No deviations from protocol were encountered during the analytical procedures.

Wet Chemistry Data

It has been determined through discussion with the client that the Total Cyanide samples that were originally received had been inadvertantly field filtered. Per instructions from the client, additional unpreserved volume that was obtained for the PCB analysis has been poured off and preserved at the bench to proceed with the Total Cyanide analysis.

****

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

Dilution Log W/Code Information
For Job A04-3685

Client Sample ID	Lab Sample ID	Parameter (Inorganic)/Method (Organic)	Dilution	Code
Spring #3	A4368508	8260	5.00	003
Spring #4	A4368509	8260	5.00	003

Dilution Code Definition:

002 - sample matrix effects
003 - excessive foaming
004 - high levels of non-target compounds
005 - sample matrix resulted in method non-compliance for an Internal Standard
006 - sample matrix resulted in method non-compliance for Surrogate
007 - nature of the TCLP matrix
008 - high concentration of target analyte(s)
009 - sample turbidity
010 - sample color
011 - insufficient volume for lower dilution
012 - sample viscosity
013 - other

DATA COMMENT PAGE

ORGANIC DATA QUALIFIERS

ND or U Indicates compound was analyzed for, but not detected at or above the reporting limit.

J Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed, or when the data indicates the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit but greater than zero.

C This flag applies to pesticide results where the identification has been confirmed by GC/MS.

B This flag is used when the analyte is found in the associated blank, as well as in the sample.

E This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.

D This flag identifies all compounds identified in an analysis at the secondary dilution factor.

N Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds, where the identification is based on the Mass Spectral library search. It is applied to all TIC results.

P This flag is used for a pesticide/Aroclor target analyte when there is greater than 25% difference for detected concentrations between the two GC columns. The lower of the two values is reported on the data page and flagged with a "P".

A This flag indicates that a TIC is a suspected aldol-condensation product.

1 Indicates coelution.

* Indicates analysis is not within the quality control limits.

INORGANIC DATA QUALIFIERS

ND or U Indicates element was analyzed for, but not detected at or above the reporting limit.

J or B Indicates a value greater than or equal to the instrument detection limit, but less than the quantitation limit.

N Indicates spike sample recovery is not within the quality control limits.

K Indicates the post digestion spike recovery is not within the quality control limits.

S Indicates value determined by the Method of Standard Addition.

M Indicates duplicate injection results exceeded quality control limits.

W Post digestion spike for Furnace AA analysis is out of quality control limits (85-115%) while sample absorbance is less than 50% of spike absorbance.

E Indicates a value estimated or not reported due to the presence of interferences.

H Indicates analytical holding time exceedance. The value obtained should be considered an estimate.

* Indicates analysis is not within the quality control limits.

+ Indicates the correlation coefficient for the Method of Standard Addition is less than 0.995.

Site Name: Red Penn Landfill

General Comments

The enclosed data have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A04-A119
Sample Cooler(s) were received at the following temperature(s); 3 @ 2.0 °C
All samples were received in good condition.

GC/MS Volatile Data

No deviations from protocol were encountered during the analytical procedures.

GC Extractable Data

No deviations from protocol were encountered during the analytical procedures.

Metals Data

No deviations from protocol were encountered during the analytical procedures.

Wet Chemistry Data

The value obtained for Total Cyanide on sample Spring #3 is inconsistent with historical trends. Reanalysis was performed and the value was confirmed. Only the result from the original analysis is provided in this data package.

****

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

Dilution Log w/Code Information
For Job A04-A119

Client Sample ID	Lab Sample ID	Parameter (Inorganic)/Method (Organic)	Dilution	Code
Spring #3	A4A11907	8260	5.00	003

ilution Code Definition:

002 - sample matrix effects
003 - excessive foaming
004 - high levels of non-target compounds
005 - sample matrix resulted in method non-compliance for an Internal Standard
006 - sample matrix resulted in method non-compliance for Surrogate
007 - nature of the TCLP matrix
008 - high concentration of target analyte(s)
009 - sample turbidity
010 - sample color
011 - insufficient volume for lower dilution
012 - sample viscosity
013 - other

DATA COMMENT PAGE

ORGANIC DATA QUALIFIERS

ND or U Indicates compound was analyzed for, but not detected at or above the reporting limit.

J Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed, or when the data indicates the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit but greater than zero.

C This flag applies to pesticide results where the identification has been confirmed by GC/MS.

B This flag is used when the analyte is found in the associated blank, as well as in the sample.

E This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.

D This flag identifies all compounds identified in an analysis at the secondary dilution factor.

N Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds; where the identification is based on the Mass Spectral library search. It is applied to all TIC results.

P This flag is used for a pesticide/Aroclor target analyte when there is greater than 25% difference for detected concentrations between the two GC columns. The lower of the two values is reported on the data page and flagged with a "P".

A This flag indicates that a TIC is a suspected aldol-condensation product.

1 Indicates coelution.

* Indicates analysis is not within the quality control limits.

INORGANIC DATA QUALIFIERS

ND or U Indicates element was analyzed for, but not detected at or above the reporting limit.

J or B Indicates a value greater than or equal to the instrument detection limit, but less than the quantitation limit.

N Indicates spike sample recovery is not within the quality control limits.

K Indicates the post digestion spike recovery is not within the quality control limits.

S Indicates value determined by the Method of Standard Addition.

M Indicates duplicate injection results exceeded quality control limits.

W Post digestion spike for Furnace AA analysis is out of quality control limits (85-115%) while sample absorbance is less than 50% of spike absorbance.

E Indicates a value estimated or not reported due to the presence of interferences.

H Indicates analytical holding time exceedance. The value obtained should be considered an estimate.

* Indicates analysis is not within the quality control limits.

+ Indicates the correlation coefficient for the Method of Standard Addition is less than 0.995.

Ms. Susan Mallette
Geologist
Kentucky Division of Waste Management
18 Reilly Road
Frankfort, KY 40601

Subject: Red Penn Landfill, Pewee Valley, Kentucky
Year 2005 Annual OM&M Report

Dear Susan:

This letter report presents the results for the fifth year (2005) of post-construction operation, maintenance, and monitoring (OM&M) activities at the Red Penn Landfill. The semiannual OM&M activities, which included groundwater and surface water monitoring, leachate head monitoring, and site inspections, were performed in accordance with the Post-Construction Performance Standards Verification Plan (Section 3 of the Final Remedial Design [RMT, October 1999]); the Operation, Monitoring, and Maintenance Plan (Appendix G of the Final Remedial Design); and revisions to these plans approved by the Kentucky Department for Environmental Protection (KDEP) dated April 2, 2003 (refer to Attachment A). The KDEP was notified of the proposed OM&M activities 5 days prior to the activity, and was present for a portion of only the first semiannual monitoring event.

Monitoring was conducted in April and October 2005, and consisted of the following activities:

- Sampling groundwater monitoring wells
- Sampling surface water springs
- Measuring the liquid levels in the leachate head wells

As discussed below, not all of the groundwater monitoring wells and surface water springs could be sampled during each monitoring event, because they were dry when the OM&M activities were conducted. The locations of the monitoring points are shown on Figure 1.

Site inspections were also conducted in April and October 2005 (refer to Attachment B).

Groundwater and Spring Monitoring Results

The groundwater and spring samples were analyzed for VOCs, PCBs, metals, and total cyanide, as specified in the OM&M Plan. The laboratory reports and a database summary report, with data validation flags, are contained in Attachment C. The following groundwater monitoring wells and springs could not be sampled during the respective monitoring event, either because they were dry,

or because the water did not recharge within a reasonable amount of time after being bailed dry (as the OM&M Plan requires that the well be purged prior to sampling).

Wells and Springs Not Sampled in 2005

APRIL 2005	OCTOBER 2005
■ MW-8002-8975 ■ MW-8002-8979 ■ Spring #4	■ MW-8002-8975 ■ MW-8002-8979 ■ Spring #1 ■ Spring #2 ■ Spring #3 ■ Spring #4 ■ Spring #5

No VOCs, PCBs, or total cyanide was detected in any of the water samples collected during the 2005 monitoring events. The laboratory data summary reports, with data validation flags (as applicable), are contained in Attachment C.

The following metals were analyzed for during each sampling event: antimony, arsenic, barium, cadmium, chromium, lead, and nickel. The metals that were detected during the 2005 monitoring activities were as follows:

METAL	MINIMUM CONCENTRATION (µg/L)	MAXIMUM CONCENTRATION (µg/L)	FREQUENCY OF DETECTION ABOVE THE EQL
Barium	49.1	215	7/8
Nickel	9.2	24.7	3/8

Figures 2 through 8 show the time trends for the following parameters: arsenic, barium, cadmium, chromium, lead, nickel, and total cyanide. On Figures 2 through 8, the parameters that were detected in the groundwater samples in 2005 show a stable to downward trend when compared with the results from 2001 through 2004.

Leachate Head Levels

The pre- and post-construction leachate head data are presented in Table 1 and graphed on Figure 9. The final landfill cover was completed in the fall of 2000. The leachate head data indicate that the final cover continues to reduce surface water infiltration into the waste and has significantly reduced the leachate levels. Leachate head trends will be evaluated now that the 5-year post-construction

monitoring period has been completed, as required by the Final Remedial Design and Scope of Work. This evaluation will be included in the Agreed Order 5-Year Review.

Site Inspections

Site inspection activities included inspecting the final landfill cover, and performing maintenance or repairs as necessary, for the following items:

- Surface water controls (*e.g.*, diversion berms and the spillway)
- Final cover (*e.g.*, vegetation, erosion, settlement, and burrowing animals)
- Groundwater and leachate monitoring wells
- Site access control

A summary of the maintenance and repair activities performed during 2005 is included in Table 2. The semiannual site inspection reports are included in Attachment B. The maintenance items that were identified during the 2005 inspections have been addressed.

Please call me, at (608) 662-5271, if you have any questions regarding this report.

Sincerely,

RMT, Inc.

Michael J. Amstadt P.E.
Project Manager

11-Oct-05	704.49	27.10[3]	677.39	677.58	-0.19[3]

Notes:

(1) Bottom of PVC screen is approximately 1 foot above the base of the landfill.

(2) Leachate head well LH-3 was initially dry when the well was completed. The depth of leachate in LH-3 on May 6, 1999, was measured 24 hours after the completion of LH-3, in accordance with the Leachate Head Well Installation Workplan; however, the leachate level was still rising at the time of the measurement. Therefore, it is not believed that this was a representative leachate head level.

(3) The depth of leachate below the top of the PVC casing was recorded at a depth below the base of LH-3. Thus, it is assumed that water was present at the bottom of the well in the end cap and the measurement was in error.

Subject: Changes to Environmental Monitoring Activities
Red Penn Landfill, Pewee Valley, Kentucky

Dear Ms. Mallette:

On behalf of the PRPs for the Red Penn Landfill in Pewee Valley, Kentucky, RMT is requesting that monitoring wells MW8002-8975 and MW8002-8979 be eliminated from the monitoring program because period of these wells do not recover after being bailed dry to allow for samples to be collected in a reasonable time (24 hours). With the exception of the first time these wells were sampled (in February 2000), MW8002-8975 has not recovered enough to collect any samples in the last 2 years, and MW8002-8979 has recovered enough to only allow a 40 mL sample for VOCs to be collected in about half of the sampling events. Furthermore, the results for the samples from MW8002-8975 and -8979 that have been collected over the last 2 years do not indicate that the groundwater at these locations has been affected by the landfill. We would appreciate if the Kentucky Division of Waste Management (KDWM) could respond to this letter by March 30, so that we can make the necessary arrangements prior to the next sampling event in April.

We are also notifying the KDWM that the PRPs intend to reduce the frequency of environmental monitoring from quarterly to semiannually beginning in April 2003. This reduction in monitoring frequency for groundwater and the springs is consistent with the Final Remedial Design (RMT, Inc., October 1999).

Please call me, at (608) 662-5271, if you have any questions regarding this letter.

Sincerely,

RMT, Inc.

Re: Red Penn Sanitation Company Landfill
Oldham County
Not/Com #20363, Mars # 9326

Dear Mr. Forney:

The Kentucky Division of Waste Management has reviewed the monitoring records and observed the most recent sampling of wells MW-8002-8975 and MW-8002-8979 at the Red Penn Landfill.

According to the records, a sample attempt was made quarterly as required, but only one actual sample was collected from these monitoring wells in the two-year sampling period. This was due to insufficient water volume, apparently because of very slow recharge to the wells.

Therefore, please change the well sampling frequency of MW-8002-8975 and MW-8002-8979 to annual. The next sampling of these two wells will therefore be in March 2004.

Thank you for your continuing cooperation with the maintenance and monitoring of this site. Please continue to notify this office of site activities at least five days prior to the activity. If you have any questions, or to notify me of planned site activities, I may be reached by telephone at (502) 564-6716, extension 263, or by email at susan.mallette@mail.state.ky.us.

Sincerely,

Susan L. Mallette

Susan L. Mallette, PG

2005 Site Inspection Reports

Red-Penn Landfill

Inspection Report

Date: April 14, 2005

Temperature: 75°F

Inspector: John Leffew

Weather: Clear

Ground Conditions: Moist

ITEM	Adequate	Requires Maintenance	COMMENTS/OBSERVATIONS
Final Cover			
Vegetation	X		Vegetation was adequate except in noted areas on the south side.
Erosion		X	Erosion was observed near Spring #4.
Burrowing animals	X		None observed.
Settlement		X	The riser pipe is higher than the casing lid for LH-2, which may be a result of settlement. The PVC riser pipe was cut to permit locking of the protective casing.
Ground Surface Conditions	X		Conditions were moist to wet.
Vegetation/Cap Conditions	X		Conditions were good.
Other	X		NA
Surface Water Controls			
Diversion berms	X		Berms appeared to be in good condition.
Final cover spillway	X		Spillway appeared to be in good condition.
Groundwater and Leachate Head Wells			
Locks	X		All wells were locked upon arrival.
Structural integrity		X	LH-2 would not close. 5 inches of PVC were cut off of LH-2 on May 18, 2005, to allow the protective casing to be locked.
Entrance Gate and lock	X		Lock was in good condition.
Additional Comments:			

Red-Penn Landfill

Inspection Report

Date: October 11, 2005

Temperature: 70 °F

Inspector: John Leffew

Weather: Partly Cloudy

Ground Conditions: Dry

ITEM	Adequate	Requires Maintenance	COMMENTS/OBSERVATIONS
Final Cover			
Vegetation	X		Vegetation was thick and dry. Erosion mat was reseeded.
Erosion	X		Erosion appears to be under control.
Burrowing animals	X		No evidence of burrowing animals was observed.
Settlement	X		Settlement was observed near LH-1. The PVC riser was cut (0.03 ft) to permit locking of the protective casing.
Ground Surface Conditions	X		Vegetation was thick.
Surface Water Controls			
Diversion berms	X		No problems were observed.
Final cover spillway	X		No problems were observed.
Groundwater and Leachate Head Wells			
Locks		X	Waste Management locks are needed for LH-1, LH-2, and LH-3.
Structural integrity	X		Structure appears to be in good condition.
Entrance Gate and lock		X	Lock was damaged. A new chain and RMT locks were installed. A new WM lock is needed.
Additional Comments:	WM locks are needed for front gate, LH-1, LH-2, and LH-3. RMT (#536) locks were temporarily installed.

General Comments

The enclosed data have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A05-3658
Sample Cooler(s) were received at the following temperature(s); 3@2.0 °C
All samples were received in good condition.

GC/MS Volatile Data

No deviations from protocol were encountered during the analytical procedures.

GC Extractable Data

No deviations from protocol were encountered during the analytical procedures.

Metals Data

No deviations from protocol were encountered during the analytical procedures.

Wet Chemistry Data

No deviations from protocol were encountered during the analytical procedures.

****

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

DATA COMMENT PAGE

ORGANIC DATA QUALIFIERS

ND or U Indicates compound was analyzed for, but not detected at or above the reporting limit.

J Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed, or when the data indicates the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit but greater than zero.

C This flag applies to pesticide results where the identification has been confirmed by GC/MS.

B This flag is used when the analyte is found in the associated blank, as well as in the sample.

E This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.

D This flag identifies all compounds identified in an analysis at the secondary dilution factor.

N Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds, where the identification is based on the Mass Spectral library search. It is applied to all TIC results.

P This flag is used for a pesticide/Aroclor target analyte when there is greater than 25% difference for detected concentrations between the two GC columns. The lower of the two values is reported on the data page and flagged with a "P".

A This flag indicates that a TIC is a suspected aldol-condensation product.

1 Indicates coelution.

* Indicates analysis is not within the quality control limits.

INORGANIC DATA QUALIFIERS

ND or U Indicates element was analyzed for, but not detected at or above the reporting limit.

J or B Indicates a value greater than or equal to the instrument detection limit, but less than the quantitation limit.

N Indicates spike sample recovery is not within the quality control limits.

K Indicates the post digestion spike recovery is not within the quality control limits.

S Indicates value determined by the Method of Standard Addition.

M Indicates duplicate injection results exceeded quality control limits.

W Post digestion spike for Furnace AA analysis is out of quality control limits (85-115%) while sample absorbance is less than 50% of spike absorbance.

E Indicates a value estimated or not reported due to the presence of interferences.

H Indicates analytical holding time exceedance. The value obtained should be considered an estimate.

* Indicates analysis is not within the quality control limits.

+ Indicates the correlation coefficient for the Method of Standard Addition is less than 0.995.

NON-CONFORMANCE SUMMARY

Job#: A05-B448

STL Project#: NY2A8892
Site Name: Red Penn Landfill

General Comments

The enclosed data may or may not have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A05-B448
Sample Cooler(s) were received at the following temperature(s); 2.0 °C
All samples were received in good condition.

GC/MS Volatile Data

No deviations from protocol were encountered during the analytical procedures.

GC Extractable Data

No deviations from protocol were encountered during the analytical procedures.

Metals Data

The analyte Chromium and Nickel was detected in the Initial Calibration Blank at a level above quality control limits. All samples associated with this ICB were non-detect for these analytes, therefore, no corrective action was necessary.

Wet Chemistry Data

The recovery of sample MW-8 Matrix Spike exhibited results above the quality control limits for Total Cyanide. However, the LCS was acceptable.

****

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

SEVERN TRENT STL

DATA QUALIFIER PAGE

These definitions are provided in the event the data in this report requires the use of one or more of the qualifiers. Not all qualifiers defined below are necessarily used in the accompanying data package.

ORGANIC DATA QUALIFIERS

ND or U Indicates compound was analyzed for, but not detected.

J Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed, or when the data indicates the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit but greater than zero.

C This flag applies to pesticide results where the identification has been confirmed by GC/MS.

B This flag is used when the analyte is found in the associated blank, as well as in the sample.

E This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.

D This flag identifies all compounds identified in an analysis at the secondary dilution factor.

N Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds, where the identification is based on the Mass Spectral library search. It is applied to all TIC results.

P This flag is used for CLP methodology only. For Pesticide/Aroclor target analytes, when a difference for detected concentrations between the two GC columns is greater than 25%, the lower of the two values is reported on the data page and flagged with a "P".

A This flag indicates that a TIC is a suspected aldol-condensation product.

1 Indicates coelution.

* Indicates analysis is not within the quality control limits.

INORGANIC DATA QUALIFIERS

ND or U Indicates element was analyzed for, but not detected. Report with the detection limit value.

J or B Indicates a value greater than or equal to the instrument detection limit, but less than the quantitation limit.

N Indicates spike sample recovery is not within the quality control limits.

S Indicates value determined by the Method of Standard Addition.

E Indicates a value estimated or not reported due to the presence of interferences.

H Indicates analytical holding time exceedance. The value obtained should be considered an estimate.

* Indicates the spike or duplicate analysis is not within the quality control limits.

+ Indicates the correlation coefficient for the Method of Standard Addition is less than 0.995.

Subject: Leachate Head Well Abandonment - Red Penn Landfill
Pewee Valley, Kentucky

Dear Jim:

On August 31, 2009, American Drilling Services (ADS) from Indianapolis, Indiana, abandoned the three leachate head wells (LH-1, LH-2, and LH-3) at the Red Penn Landfill in Pewee Valley, Kentucky. The abandonments were performed in accordance with the Leachate Head Well Abandonment Workplan dated April 2009, which was approved by the Kentucky Department for Environmental Protection (KDEP) in an e-mail dated April 22, 2009.

Specifically, the leachate head well pipes were filled with medium bentonite chips prior to removing the protective casing or any portion of the pipe. ADS used a Kobelco 27SR mini-excavator to excavate the areas around the leachate head wells to expose the geosynthetic clay liner (GCL). The pipes were then cut off below the GCL layer, and the void left by the protective casing and leachate head well was filled with medium bentonite chips. A piece of GCL (approximately 3 feet by 4 feet) was placed in the excavation as a patch. Additional granular bentonite was then placed along all four edges of the patch. The excavated soil was then replaced and compacted. The existing metal posts, with polyvinyl chloride (PVC) pipe attached to the top, were left in place at each of the leachate head wells so that the location of the head wells can be determined once the vegetation is re-established. Monitoring well decommissioning logs and a photographic log documenting the work are attached.

If you have any questions, please contact me, at (608) 662-5271

Sincerely,

RMT, Inc.

Michael Amstadt

July 15, 2009
E-mail from the KDWM to Waste Management, Inc., approving the Workplan for the abandonment of the leachate head wells

Amstadt, Mike

From: EEC [Susan.Mallette@ky.gov]
Sent: Wednesday, July 15, 2009 10:07 AM
To: Forney, Jim
Cc: Turner, Wesley (EEC); Amstadt, Michael J.
Subject: Plan for plugging leachate monitoring, Red Penn

Jim,
The Kentucky Division of Waste Management, Superfund Branch, has reviewed the Leachate Well Abandonment Workplan for Red Penn dated April 22, 2009.

It is noted that the plan does not include the removal of the well casing, which is the usual procedure for plugging monitoring wells. However, since these wells are located entirely in the waste material and since they will be filled with granular bentonite, this requirement will be waived for these wells.

The plan is approved as written. Please notify this office when work is scheduled to commence at the site.

We appreciate your continued involvement with the Red Penn Landfill.

Thanks,
Susan

Susan,

Per your request the OM &M Plan has been revised to address your two comments. I have attached a complete new document and just the four page changes. Please confirm that these are acceptable and also confirm your availability for a meeting on the afternoon of 1 Apr or morning of 2 Apr. Thanks, Jim

Subject: RE: Red Penn-Revised OM&M Plan

Jim,
We have reviewed the revised Operation, Maintenance and Monitoring Plan for Red Penn dated February 2009. This email is the response to that submittal.

The O, M & M Plan looks good, and will be complete with the following two additions:

1) Please add the Kentucky Environmental Emergency 24 hour number to the list of emergency contacts in Section 5, under emergency response guidelines. That number is (502) 564-2380 or (800) 928-2380. You could also include this number on page two of the Risk Analysis, under local emergency resources.

2) You mentioned that "personnel from the KDEP Superfund Branch" will be included in the walkover inspection, on page 3-1, which is good. Please also include the notification of KDEP at least five days before sampling, perhaps in the introduction to the Sampling Plan. That number is 502 564-6716.

In addition, we have reviewed the cover letter dated February 26, 2009, wherein you would like to schedule a meeting in early April. We are available most anytime the first two weeks in April, and can meet with you then in person, or by voice via a conference call. Do you have specific questions or areas you want to discuss at that time? Let us know when is good for you.

Thanks,

18

Susan

RE: Red Penn Sanitation Landfill
Submittal of Revised Operation, Maintenance & Monitoring Plan

Dear Ms. Mallette:

This letter is submitted as a follow up to my letter of February 4, 2009. Enclosed for the Kentucky Division of Waste Management review and approval is a Revised Operation, Maintenance and Monitoring Plan for the Red Penn Landfill. This plan has been revised to reflect the changes outlined in your letter of November 6, 2008.

Once you have reviewed this plan, I would like to schedule a meeting in early April. Please contact me at your earliest convenience to schedule the meeting.

Respectfully,

James C. Forney

RE: Red Penn Sanitation Landfill

Dear Ms. Mallette:

This letter is submitted in response to your November 6, 2008 letter regarding Red Penn Sanitation Landfill. In your letter, the Kentucky Division of Waste Management concludes that the settling parties have completed all of the requirements of the Agreed Order through the completion of the First Five-Year Review. Your letter then states that due to the continued presence of waste at the site additional five-year reviews will be necessary. Based on the agency determinations set forth in that letter, only the following items will be required for compliance:

- Site access must continue to be controlled by means of a locked gate.
- The property owner must provide annual certification in the form of a letter that the condition of the site has not changed. This letter will describe all changes made at the site, if any and the letter will be due on January 30th of each year.
- Conduct a round of groundwater sampling (three wells and five springs) in the six-month time frame prior to January 30, 2011;
- Arrange for a site walkover with personnel from the KDWM Superfund Branch to take place in the six-month time frame prior to January 30, 2011;
- Prepare a second five-year review report to be submitted by January 30, 2011; and document the condition of the cap and site access controls in the second five-year review report.

Pursuant to your letter, the property owner for Red Penn Sanitation remains responsible for controlling site access through the locked gate, and certifying annually by January 30th of each year, that site conditions have not changed.

Based on the above determinations, the O&M Plan will be revised to document these modifications to the O&M Plan, specifically discontinuance of yearly monitoring and mowing and the requirement

to perform additional five-year review activities. The revised O&M Plan will be submitted to the agency by February 28, 2009 and we will request a meeting with the agency at that time.

If you have any questions, please contact me.

Respectfully,

James C. Forney

Re: Red Penn Sanitation Company Landfill
Oldham County
AI # 6302, Mars # 9326
CERCLIS # KYD981469794

Dear Mr. Forney:

The Kentucky Division of Waste Management (KDWM), Superfund Branch, has reviewed the Agreed Order and the Five Year Review Report, as well as the site operation and maintenance plans from the Final Remedial Design and the Remedial Action Workplan, for the Red Penn Landfill, Pewee Valley, Kentucky, an NPL site.

As originally required by the Workplan, the following protective measures have been completed or are now in place at the site:

- The land use restriction (Environmental Covenant) was recorded in the office of the clerk of the Oldham County Court on June 30, 2008.
- The entrance features a locked gate to control access to the site.
- The landfill cover has been established over the waste area to minimize the potential of direct contact with the land fill contents and to reduce the infiltration of precipitation.
- Erosion matting and/or riprap has been placed in selected steep areas.
- Permanent vegetative cover has been established on the cap and adjacent areas to minimize erosion and sediment transport.
- The groundwater monitoring, consisting of samples collected from wells MW-6, MW8002-8975 and MW 8002-8979 and Springs #1 through #5, was conducted through the five year period as described in Table 1 of the Workplan
- The leachate head levels were measured and recorded for the five years as described in Table 1.

This concludes the first five years of the Operation and Maintenance phase of the site remedy. This information is documented in the Five Year Review report written by RMT, Inc. and dated January 2006. At this time, the site was evaluated to determine what additional maintenance is required, if any, and whether further monitoring is necessary.

In accordance with Kentucky Revised Statute (KRS) 224.01-400 (18) (b), this landfill is designated a site with waste managed in place. Therefore the maintenance of the engineering and institutional controls that allow the waste to be contained in such a way as to protect human health, safety, and the environment must be assured.

After reviewing the site data from the previous five year period and in conjunction with the site documents, the US EPA's guidelines for a five year review report, and the statutes and regulations of the Commonwealth of Kentucky, it is determined that:

- Yearly monitoring and site mowing may be discontinued.
- The site access must continue to be controlled by means of a locked gate.
- The property owner must provide annual certification in the form of a letter that the condition of the site has not changed. This letter will describe all changes made at the site, if any. The letter will be due on January 30th of each year.
- The next five year review will be due by January 30, 2011. This will be the responsibility of the original PRPs listed in the Agreed Order. It will include a round of groundwater sampling (the three wells and five springs as described above), description of the condition of the cap and site access controls, and a brief site walkover with personnel from the KDWM Superfund Branch.
- The O & M plan should be updated to reflect these changes.

If conditions change or additional data indicates their necessity, then additional sampling and maintenance may be required.

Pursuant to the Agreed Order (paragraph 26), the settling parties were required to perform the O & M work as outlined in the Remedial Design (RD). In accordance with the plan outlined in the RD (page 12), after five years the data collected will be used to determine whether further monitoring and management is necessary. The initial five year review has been completed, and it has been determined that due to the continued presence of waste at the site additional five year reviews will be necessary. Therefore, the Agreed Order may not be terminated.

Thank you for your continued work at this site. If you have any questions, you may contact me by telephone at (502) 564-6716 and by email at susan.mallette@ky.gov. We look forward to the continuing successful remediation of the Red Penn Landfill site.

Sincerely,

Susan L. Mallette

Re: Red Penn Sanitation Company Landfill
Oldham County
AI # 6302, Mars # 9326

Dear Mr. Forney:

The Kentucky Division of Waste Management (KDWM), Superfund Branch, has received the Five Year Review Report for the Red Penn Landfill, Pewee Valley, Kentucky, dated January 2006.

Pursuant to Kentucky Revised Statute (KRS) 224.01-400 (18) (b), this landfill is to be reviewed as a waste site that is managed in place. The general purpose of a five year review is to determine that the waste left in place is managed in a manner that minimizes the harmful effects of the release and protects human health, safety and the environment. In this case, the purpose of the five year review is also to determine if the conditions of Agreed Order DWM-4870 have been met.

The following additional items are required before the Five Year Review Report can be approved:

- The Biological Study must be addressed as in the original documents
- The Deep Aquifer must be sampled off-site as in the original documents
- An Environmental Covenant (EC) signed by the owner(s) of the property must be registered at the Oldham County Courthouse as per our Office of Legal Services. This EC will include a one day public notice
- The Five Year Inspection and walk-over of the site by the interested parties must occur after the EC has been registered, and must include a representative of KDWM

Based on information supplied during the previous five year period and the information requested in the above bullets, a plan will be required to address the long term maintenance requirements for the site. These may include additional review periods and sampling programs in addition to routine cap maintenance.

Please note: In order to ensure timely processing and review of submittals, please include the above referenced AI number (#6302) on any correspondence regarding the site. When submitting reports, electronic documents in PDF format are preferred and must be attached to a paper cover letter with an original signature. If submitting hardcopies of reports, they must be unstapled and unbound for ease of scanning. Duplicate copies are not necessary, but paper versions of large and detailed maps are appreciated.

Thank you for your continued interest in this site. If you have any questions, my telephone is (502) 564-6716, extension 263, and my email is susan.mallette@ky.gov .

Sincerely,

Susan L. Mallette

Re: Red Penn Sanitation Company Landfill
Oldham County
Not/Com #20363, Mars # 9326

Dear Mr. Forney:

The Kentucky Division of Waste Management has received and reviewed the Year 2003 Annual OM&M Report for the Red Penn Landfill.

As you will note in my previous letter, dated April 2, 2003, and included in Appendix B of the report, this office requires five-day notification of any on-site activity. Site activities that require notification include cap repairs, such as those done in June, and the monitoring conducted on November 18th. (Note the discrepancy: the report says November but the cover letter says October.) However, we did not receive notification of either event.

You are required to notify this office of all site activities at least five days prior to the activity. If you have any questions, or to notify me of planned site activities, I may be reached by telephone at (502) 564-6716, extension 263, or by email at susan.mallette@ky.gov . Thank you for your continuing maintenance and monitoring of this site.

Sincerely,

Susan L. Mallette

Re: Red Penn Sanitation Company Landfill
Oldham County
Not/Com #20363, Mars # 9326

Dear Mr. Forney:

The Kentucky Division of Waste Management has reviewed the monitoring records and observed the most recent sampling of wells MW-8002-8975 and MW-8002-8979 at the Red Penn Landfill.

According to the records, a sample attempt was made quarterly as required, but only one actual sample was collected from these monitoring wells in the two-year sampling period. This was due to insufficient water volume, apparently because of very slow recharge to the wells.

Therefore, please change the well sampling frequency of MW-8002-8975 and MW-8002-8979 to annual. The next sampling of these two wells will therefore be in March 2004.

Thank you for your continuing cooperation with the maintenance and monitoring of this site. Please continue to notify this office of site activities at least five days prior to the activity. If you have any questions, or to notify me of planned site activities, I may be reached by telephone at (502) 564-6716, extension 263, or by email at susan.mallette@mail.state.ky.us.

Subject: Changes to Environmental Monitoring Activities
Red Penn Landfill, Pewee Valley, Kentucky

Dear Ms. Mallette:

On behalf of the PRPs for the Red Penn Landfill in Pewee Valley, Kentucky, RMT is requesting that monitoring wells MW8002-8975 and MW8002-8979 be eliminated from the monitoring program because period of these wells do not recover after being bailed dry to allow for samples to be collected in a reasonable time (24 hours). With the exception of the first time these wells were sampled (in February 2000), MW8002-8975 has not recovered enough to collect any samples in the last 2 years, and MW8002-8979 has recovered enough to only allow a 40 mL sample for VOCs to be collected in about half of the sampling events. Furthermore, the results for the samples from MW8002-8975 and -8979 that have been collected over the last 2 years do not indicate that the groundwater at these locations has been affected by the landfill. We would appreciate if the Kentucky Division of Waste Management (KDWM) could respond to this letter by March 30, so that we can make the necessary arrangements prior to the next sampling event in April.

We are also notifying the KDWM that the PRPs intend to reduce the frequency of environmental monitoring from quarterly to semiannually beginning in April 2003. This reduction in monitoring frequency for groundwater and the springs is consistent with the Final Remedial Design (RMT, Inc., October 1999).

Please call me, at (608) 662-5271, if you have any questions regarding this letter.

Sincerely,

RMT, Inc.

Re: Red Penn Sanitation Company Landfill
Oldham County
Not/Com #20363, Mars # 9326

Dear Mr. Forney:

The Kentucky Division of Waste Management has reviewed the 2001 Annual OM&M Report for the Red Penn Landfill.

We noted that only one quarterly sample was collected from the down gradient monitoring wells, MW-8002-8975 and MW-8002-8979. This was explained, "the water did not recharge within a reasonable amount of time after being bailed dry."

Please note that these quarterly samples are required. You may have to adjust your sampling plan to accommodate the slow recharge of these wells at certain times of the year.

If you have any questions, I may be contacted by telephone at (502) 564-6716, extension 263, or by email susan.mallette@mail.state.ky.us.

RE: Construction Documentation Report
Red Penn Landfill
Oldham County, Kentucky

Dear Mike:

The Kentucky Division of Waste Management has reviewed the December, 2000 Construction Documentation Report for the Red Penn Landfill site. We have concluded that the report accurately documents construction activities and that the construction was completed in conformance with the Scope of Work and the project construction plans and specifications.

Please keep me informed as to the timing of planned activities for this season and send a copy of the environmental sampling results when you have received them. If you have any questions or concerns, please call me at 502 564-2225 ext. 229.

Sincerely,

DECLARATION OF RESTRICTIONS

THIS DECLARATION is made as of the 24 day of February, 2003, by Waste Management of Kentucky L.L.C. (Declarant).

WHEREAS, Declarant and Ford Motor Company, on the one hand, and Red-Penn Sanitation Co., Inc. (Red-Penn) and its Shareholders John R. Redmon, Guy Redmon and John G. Guelda (collectively, Red-Penn and its shareholders are referred to as Owner), on the other hand, entered into an Agreed Order with the Kentucky Natural Resources and Environmental Protection Cabinet (the Cabinet) for the development and implementation of a Remedial Design for the Red Penn Landfill.

WHEREAS, Owner is the owner of approximately 151 acres of real property located on State Route 362 in Oldham and Shelby Counties, Kentucky (the Property), more particularly described in Deed Book 94, Page 439; Deed Book 99, Page 56; Deed Book 99, Page 381 and Deed Book 118, Page 422 of the Oldham County Clerk's Office, and with legal description as set forth on Attachment A.

WHEREAS, from approximately 1954 to 1986 Red-Penn owned and operated a licensed landfill on the Property. The Cabinet has alleged that hazardous substances and/or pollutants and contaminants were disposed of at the landfill in violation of certain permit provisions.

WHEREAS, Declarant and Ford Motor Company are the Settling Parties (as that term is used in the Agreed Order) that undertook the actions necessary to correct the effects of the release on the environment pursuant to KRS 224.01-400, the Agreed Order and the Final Remedial Design approved by the Cabinet.

WHEREAS, Declarant has proposed and implemented the Final Remedial Design (the Plan) to correct the effects of the release which includes controlling exposure to the hazardous substances, pollutants or contaminants by restricting use of the Property.

WHEREAS, the Cabinet has approved the Plan and the Declarant has taken the actions required by the approved Plan. Declarant shall continue performing operation and maintenance (O&M) activities as required by and in accordance with the Plan or Cabinet-approved modification thereto. Implementation of the Plan, in addition to the restrictions contained within this restrictive covenant, is designed to reduce the risk of exposure to hazardous substances, pollutants or contaminants.

WHEREAS, further information concerning the release and the activities performed to correct the effects of the release may be obtained by contacting the Custodian of Records of the Division of Waste Management at 14 Reilly Road, Frankfort, Kentucky 40601. Records concerning this property may be found under File No. DWM-4870.

NOW THEREFORE, pursuant to KRS 224.01-400 and the Plan, the following restrictions are imposed:

Leo H Johnson
225 W Main; 2000
Lou 40202

2

1.) Definitions

A. "Residential use" means any use of the Property related to a (i) residence or dwelling, including but not limited to a house, apartment, or condominium, or (ii) school, hospital, day care center, playground, or outdoor recreational area.

B. "Owner" means Owner (as described above) or any successor owner or owners.

2.) Restrictions Applicable to the Property

Owner shall assure that the use, occupancy, and activity of and at the property are restricted as follows:

A. Use. No residential use of the Property shall be permitted. Uses of the Property are restricted to those uses that are consistent with the exposure assumptions modeled in the baseline risk assessment (CDM Federal Programs Corp. and ARCS Region IV, June 18, 1993). A copy of the baseline risk assessment can be obtained from the Division of Waste Management. Activities at the Property are restricted to those activities that will not or could not interfere with the remedial action, operation and maintenance, monitoring, and other measures necessary to ensure the effectiveness and integrity of the remedial action, including without limitation the cap installed on the landfill.

B. Groundwater. Groundwater at the Property shall not be used for drinking or other domestic purposes. Goundwater well installation and groundwater use within the property boundary for all domestic, commercial, and industrial uses is prohibited, except groundwater monitoring wells necessary to implement and monitor the remedial action. Construction of groundwater-fed impoundments is prohibited within the property boundary.

C. Except as necessary to protect human health, safety or the environment, no action shall be taken, allowed, suffered, or omitted on the Property if such action or omission is reasonably likely to:

i. Create a risk of migration of hazardous substances, pollutants or contaminants or a potential hazard to human health or the environment; or

ii. Result in a disturbance of the structural integrity of any engineering controls designed or utilized at the Property to contain hazardous substances, pollutants or contaminants or limit human exposure to hazardous substances, pollutants or contaminants;

iii. Prior to any construction activity or disturbance of any approved cap placed on the Property, the Owner shall submit to the Cabinet a written rationale for the disturbance and detailed plans of the proposed construction for their review and written approval. No such construction activity or disturbance is permitted without this prior written approval.

D. Disturbances. Excavation of soil at the property is prohibited without approval of the Cabinet. This prohibition does not preclude cap maintenance/repair conducted by the Settling Parties pursuant to the approved O&M plan.

E. Construction. No building shall be constructed on the Property without prior approval of the Cabinet.

3.) Restrictions Run With Land

A. Unless cancelled, altered or amended under the provision of Paragraph 4 of this Declaration, these restrictions are to run with the land and shall be binding on Owner, its successors, heirs and assigns unless an instrument signed by the Owner and the Cabinet has been recorded, agreeing to change these restrictions in whole or in part.

B. The Owner shall provide written notice to the Cabinet at least thirty (30) days prior to the sale, assignment, or lease of this property or any portion thereof, and provide the name, address, and telephone number of the new owner or occupant of the property. The written notice shall be sent to: Manager, Superfund Branch, 14 Reilly Road, Frankfort, Kentucky 40601.

C. Except as provided in paragraph 4 of this Declaration, the Property shall hereafter be held, transferred, sold, leased, conveyed and occupied subject to the restrictions set forth herein, each and all of which is and are for, and shall inure to the benefit of and pass with each and every part of the Property and shall apply to and bind the heirs, assignees and successors in interest of the Owner.

4.) Release of Restriction

These restrictions may not be cancelled, altered or amended without the affirmative action of the Owner and the Cabinet, in an instrument executed by both parties agreeing to change these restrictions in whole or in part. The Cabinet shall not approve any change in use or restrictions on the Property that would fail to protect human health, safety, and the environment in accordance with KRS 224.01-400.

4

5.) No Waiver

Failure of any Owner or the Cabinet to demand or insist upon observance of any of these restrictions, or to proceed for restraint of violations, shall not be deemed a waiver of the violation, or the right to seek enforcement of these restrictions.

6.) Enforcement

Enforcement of these restrictions shall be by proceeding of law or in equity, brought by any Owner of the Property or by the Cabinet, against any party, including owner, violating or attempting to violate any covenant or restriction, either to restrain violation, to direct restoration or to recover damages.

7.) Effect of Invalidation

Invalidation of any one of these restrictions, conditions or covenants by judgment or court order shall in no way affect any of the other provisions, which shall remain in full force and effect.

IN WITNESS WHEREOF, Declarant has executed this Declaration of Restrictions as of the date set forth above.

ATTACHMENT A

1. Deed Book 94, Page 439

BEGINNING at an iron pipe at a corner post in the east right-of-way line of Kentucky Highway No. 362, formerly Pewee Valley & Flat Rock Road, said iron pipe being the Northwest corner of the Ed Hall farm and being the Southwest corner of the W. M. Gill Tract as recorded in Deed Book 70, Page 52 in the Oldham County Court Clerk's office; thence with the right-of-way line North 29 degrees 05 minutes West 146.5 feet to a point in the entrance road; thence passing a gate post at 36.0 feet, North 85 degrees 15 minutes East 215.0 feet to an iron pipe at a fence post; thence continuing with the remaining lands of Gill North 59 degrees 45 minutes East 110.0 feet to an iron pipe at a fence post at the East side of a gate; thence North 47 degrees 30 minutes East 153.5 feet to an iron pipe at a fence post; thence North 55 degrees 10 minutes East 93.0 feet to an iron pipe at a fence post; thence North 76 degrees 20 minutes East 132.0 feet to an iron pipe at a fence post; thence North 69 degrees 30 minutes East 100.0 feet to an iron pipe at a fence post; thence North 28 degrees 30 minutes East 573.5 feet to an iron pipe at the West post of a gap in the fence; thence North 07 degrees 15 minutes East 266.5 feet to an iron pipe at a fence post; thence North 20 degrees 25 minutes East 199.0 feet to an iron pipe at a fence post in a branch; thence with said branch North 56 degrees 35 minutes West 309.0 feet to a railroad spike in a 12 inch hackberry; then with an existing fence North 28 degrees 38 minutes East 733.0 feet to an iron pipe at a corner post in the line with W. M. Gill, said fence being a portion of the Northwest line of the Price Tract as recorded in Deed Book 60, Page 295; thence along an existing fence South 64 degrees 45 minutes East 178.0 feet to a 30 inch sugar tree at the brow of the bluff, being a corner with Jack Ott; thence continuing over the bluff South 64 degrees 45 minutes East 102.0 feet to a 10 inch walnut; thence North 89 degrees 15 minutes East 153.0 feet to a point in the center of Floyds Fork, having passed an iron pipe at 30.0 feet; thence continuing downstream with Floyds Fork South 01 degrees 52 minutes West 105.0 feet to a point in the center of the stream; thence with the center of the stream South 13 degrees 05 minutes East 300.0 feet to a point; thence South 19 degrees 35 minutes East 307.0 feet to a point; thence South 17 degrees 09 minutes East 360.0 feet to a point; thence South 23 degrees and 15 minutes East 485 feet to a point in the center of Floyds Fork, being the Northeast corner of the Ed Hall farm; thence along a fence with Hall, passing an iron pipe at 60.0 feet, South 71 degrees 30 minutes West 787.0 feet to a fence post; thence South 72 degrees 30 minutes West 1270.0 feet to the beginning; containing 35.90 acres more or less, and being South end of the Allender Place formerly owned by Gill as recorded in Deed Book 70, Page 52, and being the Southeast end of the Price Tract formerly owned by Gill as recorded in Deed Book 89, Page 229, in the Oldham County Court Clerk's office.

BEING the same property conveyed to Guy L. Redmon, Jr. and Chris P. Pennington, doing business as the Red-Penn Sanitation Company by deed from W. M. Gill and Frances L. Gill, his wife, dated March 1, 1962, and recorded in Deed Book 92, Page 571 in the office of the Clerk of the County Court of Oldham County, Kentucky.

2. Deed Book 99, Page 56

Tract 1. Beginning at a point under the bridge in the middle of Floyds Fork Creek and running thence with the East right-of-way line of Kentucky Highway 362 North 24 degrees 30 minutes West 359 feet to an iron pipe for corner with the land of Redmon and Pennington; thence with the land of Redmon and Pennington North 72 degrees 30 minutes East 1270 feet to a point and North 71 degrees 30 minutes East 787 feet to a 20-inch sycamore corner to Kentucky Women's Prison property; thence South 22 degrees East 440 feet to a 22-inch sycamore; thence South 11 degrees 30 minutes East 210 feet to an 18-inch elm; thence South 19 degrees 15 minutes West 170 feet to a 4-inch elm; thence South 83 degrees 30 minutes West 207 feet to a 6-inch maple; thence North 66 degrees West 143 feet to a 15-inch ash; thence North 86 degrees 45 minutes West 195 feet to corner with said prison property; thence continuing with said prison property South 3 degrees 30 minutes East 222 feet to a 10-inch walnut; thence South 11 degrees West 116 feet to a corner post in the north right-of-way line of Kentucky Highway 362; thence with said right-of-way line as follows: South 85 degrees 30 minutes West 395 feet to a spike, South 54 degrees West 181.5 feet to a spike, South 75 degrees 15 minutes West 181.5 feet to a spike, North 83 degrees 45 minutes West 247 feet to a spike, South 63 degrees 30 minutes West 90 feet to a spike, South 86 degrees West 160 feet to a point, North 53 degrees 30 minutes West 155 feet to a point, North 20 degrees West 235 feet to the center of Floyds Fork Creek at the point of beginning containing 36 acres, more or less.

And being the same property conveyed to Ed Hall and Bettie Hall, his wife, (also known as Bettie Elizabeth Hall) in joint survivorship by H. Elliott Netherton and wife, by deed dated July 3, 1945, and recorded in Deed Book 65, page 351, in the office of the County Court Clerk of Oldham County, Kentucky, and the same of which Bettie Elizabeth Hall became the sole owner upon the death of Ed Hall on November 27, 1952, and the same which Charles Hall was directed to sell under the will of Bettie Elizabeth Hall, dated March 12, 1958, and recorded in Will Book 12, page 317, in the office of the clerk aforesaid.

Tract 2. Beginning in the southwest right-of-way of Kentucky Highway 362 at a point opposite the northwest corner of the tract conveyed to Ed Hall and Bettie Hall, his wife, (Tract 1 above) and near a 15-inch elm; thence South 3 degrees West 215 feet to a point in the branch; thence South 44 degrees 30 minutes East 150 feet to a point in the center of Floyds Fork Creek; thence with the center of said creek North 63 degrees East 60 feet to the southwest line of Kentucky

Highway 362; thence with the southwest line of said highway North 24 degrees 30 minutes West 340 feet to the point of beginning.

And being a tract of land claimed and held in open, notorious, adverse possession by Ed Hall and Bettie Hall, (also known as Bettie Elizabeth Hall) for more than 40 years.

3. Deed Book 99, Page 381

Beginning at a spike in the east right-of-way line of Highway No. 362 common to the property now owned by the Red-Penn Sanitation Co.; thence running with the property lines of the Red-Penn Sanitation Co. North 85 degrees 15 minutes East 215 feet; North 59 degrees 45 minutes East 110 feet; North 47 degrees 30 minutes East 153.5 feet; North 55 degrees 10 minutes East 93 feet; North 76 degrees 20 minutes East 132 feet; North 69 degrees 30 minutes East 100 feet; North 28 degrees 30 minutes East 573.5 feet; North 7 degrees 15 minutes East 266.5 feet; North 20 degrees 25 minutes East 199 feet; North 56 degrees 35 minutes West 309 feet to the remaining land of W.M. Gill; thence with the remaining land of W.M. Gill South 28 degrees 38 minutes West 1275.5 feet to a spike in a 22 inch hickory tree; thence South 65 degrees 30 minutes West approximately 325 feet to the east right-of-way line of State Highway No. 362; thence with the east right-of-way line of Kentucky Highway No. 362 in a southwardly direction to the point of beginning a distance of 175 feet, and being a tract of land containing approximately 12 ½ acres, more or less.

And being a part of the same land conveyed W.M. Gill by deed recorded in Deed Book 60, page 295, and known as the Price Tract, and a part of the land conveyed W.M. Gill by deed recorded in Deed Book 70, page 52, known as the Allender Tract, all in the Oldham County Court Clerk's office.

4. Deed Book 118, Page 422

Beginning at an iron pipe in the easterly line of Hawley-Gibson Road being corner with William Lee Gill; thence with the line of William Lee Gill south 68 degrees and 05 minutes east 1,374.0 feet to an iron pipe at a corner post with Red-Penn Sanitation Co.; thence with the line of the Red-Penn Sanitation Co. south 28 degrees and 38 minutes west 2,257 feet to a stake; thence south 48 degrees and 30 minutes west 124.0 feet to an iron pipe at a corner post on the easterly side of Kentucky Highway No. 362; thence with the easterly right-of-way line of Kentucky Highway No. 362 north 40 degrees and 20 minutes west 300.0 feet to an iron pipe; thence north 40 degrees and 45 minutes west 150.0 feet to an iron pipe; thence north 20 degrees and 45 minutes west 100.0 feet to an iron pipe; thence north 04 degrees and 45 minutes west 435.0 feet to an iron pipe; thence north 17 degrees and 15 minutes west 415.0 feet to an iron pipe; thence north 19 degrees and 40 minutes west 345.0 feet to an iron pipe at a corner post at the intersection with the easterly line of the Hawley-Gibson Road; thence with the

eastern line of the road north 48 degrees and 00 minutes east 196.0 feet to a railroad spike in a 12 inch cedar; thence north 33 degrees and 40 minutes east 184.0 feet to a point; thence north 37 degrees and 10 minutes east 200.0 feet to a point; thence north 47 degrees and 45 minutes east 93.0 feet to a 30 inch cherry; thence north 48 degrees and 30 minutes east 412.0 feet in all, having passed an 8 inch walnut at 5.5 feet, to the beginning, containing 66.35 acres more or less.

Being the last remaining part of the same property conveyed to W.M. Gill by Deed dated the _____ day of _____, 19__, and recorded in Deed Book 70, Page 52, in the office of the Clerk of the County Court of Oldham County, Kentucky; the said W.M. Gill died on May 14, 1967, and Frances L. Gill, the party of the first part acquired her interest under the Will of said W.M. Gill, which is recorded in Will Book 13, Page 177, in the aforesaid Clerk's office.

THIS PROPERTY IS SUBJECT TO AN ENVIRONMENTAL COVENANT PURSUANT TO KRS 224 Subchapter 80
ENVIRONMENTAL COVENANT

Red Penn Sanitation Co., Inc. (hereinafter "Grantor") grants an Environmental Covenant (hereinafter "Covenant") this 14 day of DECEMBER, 2007 to the following Holder(s) pursuant to KRS Chapter 224 Subchapter 80: Red Penn Sanitiation Co., Inc., Waste Management of Kentucky L.L.C. ("Waste Management"), John G. Guelda, and Ford Motor Company ("Ford").

WHEREAS, Grantor is the owner of approximately 137.295 acres of real property located on State Route 362 in Oldham County, Kentucky (hereinafter "the Property"), more particularly described in Deed Book 94, Page 439; Deed Book 99, Page 56; Deed Book 99, Page 381 and Deed Book 118, Page 422 of the Oldham County Clerk's Office, and with legal description as set forth on Attachment A;

WHEREAS, this instrument is an Environmental Covenant developed and executed pursuant to KRS 224.80-100 to KRS 224.80-210;

WHEREAS, from approximately 1954 to 1986 Grantor owned and operated a permitted landfill on the Property. During the operation of the landfill, a release of hazardous substances, pollutants and/or contaminants occurred to the soil and groundwater on the Property. The specific contaminants released are documented in the files of the Division of Waste Management under Agency Interest No. 6302 and include, but are not limited to, the following: EPA Fact Sheet, dated August 1991, Kentucky's Preliminary Assessment Site Investigation Report dated July 3, 1986, and EPA's Hazardous Ranking System Evaluation for Groundwater. The area where the releases of hazardous constituents, pollutants and contaminants remains on the Property is known as the Impacted Area more particularly described in Attachment B;

WHEREAS, pursuant to Agreed Order File No. DWM-4870, the Property is the subject of a remedial action pursuant to KRS 224.01-400;

WHEREAS, John G. Guelda, Waste Management and Ford proposed a Final Remedial Design (the Plan) to correct the effects of the release on the Property pursuant to KRS 224.01-400 which included controlling exposure to the hazardous substances, pollutants or contaminants by restricting the use of the Property and the activities on the Property. The Cabinet approved the Plan and Waste Management and Ford conducted all remedial actions required by the approved Plan. Atlantic Richfield Company and John G. Guelda contributed financially to the peformance of the Plan. Monitoring, maintenance of engineering controls, and sampling activities occur in accordance with the Plan;

WHEREAS, the purpose of this Covenant is to ensure protection of human health and the environment by placing restrictions on the use of the Property to reduce the risk to human health to below the target risk levels for those hazardous constitutents, substances, pollutants, or contaminants that remain on the Property;

15

WHEREAS, further information concerning the release and the activities performed to correct the effects of the release may be obtained by contacting the Custodian of Records of the Kentucky Division of Waste Management at 14 Reilly Road, Frankfort, Kentucky 40601. Records concerning this property may be found under Agency Interest Number 6302 and DWM File No. 4870.

NOW, THEREFORE, Grantor hereby grants this Covenant to the Holders and declares that the Property shall hereinafter be bound by, held, sold, used, improved, occupied, leased, hypothecated, encumbered and/or conveyed subject to the following requirements set forth in paragraphs 1 through 3 below:

1. DEFINITIONS

A. Owner. "Owner" means Grantor, its successors and assigns in interest.

B. Residential Use. "Residential Use" includes single family or multi family residences; child or adult care facilities; nursing home or assisted living facilities; use as a church; and any type of educational purpose for children/young adults in grades kindergarten through twelfth grade.

2. RESTRICTIONS APPLICABLE TO THE PROPERY

A. Restrictions Applicable to Entire Property:

i. Groundwater well installation and groundwater use on the Property for all domestic, commercial, and industrial uses is prohibited, except for groundwater monitoring wells which are necessary to implement and monitor the remedial action. Construction of groundwater-fed impoundments is prohibited on the Property.

ii. Except as necessary to protect human health, safety or the environment, no action shall be taken, allowed, suffered, or omitted on the Property if such action or omission is reasonably likely to:

a. Create a risk of migration of hazardous substances, pollutants or contaminants or a potential hazard to human health or the environment; or
b. Result in a disturbance of the structural integrity of any engineering controls, including but not limited to landfill caps and monitoring wells, designed or utilized at the Property to contain hazardous substances, pollutants or contaminants or limit human exposure to hazardous substances, pollutants or contaminants;

B. Restrictions Applicable to the Impacted Area:

i. No Residential Use shall be permitted on the Impacted Area.

16

ii. Other than for cap maintenance activities, prior to any construction activity or disturbance of the approved cap placed on the Impacted Area, the Owner(s) shall submit to the Director, Kentucky Division of Waste Management, a written rationale for the disturbance and detailed plans of the proposed construction for the Cabinet's review and written approval.

iii. No building shall be constructed on the Impacted Area without the Owner(s) obtaining prior approval of the Director, Kentucky Division of Waste Management.

iv. No recreational use at the Impacted Area shall interfere with the cap or cap maintenance activities.

3. GENERAL PROVISIONS

A. Restrictions to Run with the Land. This Covenant runs with the land pursuant to KRS 224.80-140; is perpetual unless modified or terminated pursuant to the terms of this Covenant as set forth in paragraph 31 of this Covenant; is imposed upon the entire Property unless expressly stated as applicable only to a specific portion thereof; and inures to the benefit of and passes with each and every portion of the Property; and binds the Owner(s), the Holders, all persons using the land, their heirs, successors and assigns having any right, title or interest in the Property, or any part thereof who have subordinated those interests to this Covenant, and all persons, their heirs, successors and assigns who obtain any right, title or interest in the Property, or any part thereof after the recordation of this Covenant.

B. Conveyances of the Property. Owner(s) shall notify the Director of the Kentucky Division of Waste Management at least thirty (30) days in advance of any proposed sale, assignment, lease, grant, transfer, or conveyance of any interest in any or all of the Property. Notice shall include the name, address, and telephone number of the prospective owner or occupier, a copy of the proposed deed or other documentation evidencing the conveyance, and a survey map that shows the boundaries of the Property being transferred. The Owner shall also provide the prospective owner or occupier written notice of (i) the KDWM approved Scope of Work (May 1, 1998), (ii) any instrument by which an interest in the Property has been conveyed that confers a right to access to the site, and (iii) any instrument by which an interest in the Property has been conveyed that confers a right to enforce restrictions on the use of the Property, including but not limited to, this Covenant.

C. Incorporation into Deeds and Leases. Each instrument hereafter conveying any interest in the Property or any portion of the Property shall contain a notice of the activity and use limitations set forth in this Covenant and provide the recorded location of this Covenant. The notice shall be substantially in the following form:

17

THE INTEREST CONVEYED HEREBY IS SUBJECT TO AN ENVIRONMENTAL COVENANT, DATED DECEMBER 14, 2007, RECORDED IN THE OFFICIAL RECORDS OF THE OLDHAM COUNTY CLERK'S OFFICE IN DEED BOOK R 10, PAGE 211.

D. Zoning Changes. Owner(s) shall notify the Director of the Kentucky Division of Waste Management simultaneously when any application is submitted to a local government for a building permit for the Property. Owner(s) shall notify the Kentucky Division of Waste Management of any proposed change in the land use for the Property.

E. Compliance Certification. Owner(s) shall submit an annual report to the Director of the Kentucky Division of Waste Management, on the anniversary of the date this Covenant was signed by the Grantor(s), detailing the Owner(s) compliance, and any lack of compliance with the terms of the Covenant.

F. Right of Access. Owner(s) hereby grants the Cabinet, its agents, contractors and employees and all Holders, their agents, contractors and employees, the right of access to the Property for implementation or enforcement of this Covenant.

G. Representations and Warranties. Grantor hereby represents and warrants to the other signatories hereto:

i. that the Grantor has the power and authority to enter into this Environmental Covenant, to grant the rights and interests herein provided and to carry out all obligations hereunder;

ii. that the Grantor is the sole owner of the Property and holds fee simple title which is free, clear and unencumbered;

iii. that the Grantor has identified all other parties that hold any interest (e.g., encumbrance) in the Property and notified such parties of the Grantor's intention to enter into this Environmental Covenant;

iv. that the Grantor has complied with all public notice requirements in KRS 224.80-110.

v. that this Environmental Covenant will not materially violate or contravene or constitute a material default under any other agreement, document or instrument to which Grantor is a party, by which Grantor may be bound or affected.

vi. that this Environmental Covenant will not materially violate or contravene any zoning law or other law regulating use of the Property.

vii. that this Environmental Covenant does not authorize a use of the Property that is otherwise prohibited by a recorded instrument that has priority over the Environmental Covenant.

H. Compliance Enforcement. The terms of the Environmental Covenant may be enforced by the Kentucky Environmental and Public Protection Cabinet or any person identified in KRS 224.80-200 in accordance with applicable law. Failure to timely enforce compliance with this Environmental Covenant or the use limitations contained herein by any person shall not bar subsequent enforcement by such person and shall not be deemed a waiver of the person's right to take action to enforce any non-compliance. Nothing in this Environmental Covenant shall restrict the Kentucky Environmental and Public Protection Cabinet from exercising any authority under applicable law.

I. Modification/Termination. This Environmental Covenant runs with the land and is perpetual unless modified or terminated in accordance with KRS 224.80-180 or KRS 224.80-190. The term "Amendment" as used in this Environmental Covenant, shall mean any changes to the Environmental Covenant, including the activity and use limitations set forth herein, or the elimination of one or more activity and use limitations when there is at least one limitation remaining. The term "Termination" as used in this Environmental Covenant, shall mean the elimination of all activity and use limitations set forth herein and all other obligations under this Environmental Covenant

J. Notices. Any document or communication required to be sent to the Cabinet under this Covenant shall be sent to:

Director, Division of Waste Management
Department for Environmental Protection
14 Reilly Road
Frankfort, Kentucky 40601

K. Severability. If any provision of this Covenant is found to be unenforceable in any respect, the validity, legality, and enforceability of the remaining provisions shall not in any way be affected or impaired.

L. Recordation. Within ten (10) business days after the date of the final required signature upon this Covenant, Grantor(s) shall file this Covenant in the county clerk's office in each county that contains any portion of the real property subject to this Covenant.

M. Effective Date. The effective date of this Covenant shall be the date upon which the fully executed Covenant has been recorded as a deed record for the Property with the Oldham County Clerk's Office.

N. Distribution of Environmental Covenant. The Grantor shall within thirty (30) days of filing this Covenant in the Oldham County Clerk's Office, distribute a file and date stamped copy of the recorded Covenant to the following persons: Director, Kentucky Division of Waste Management; Judge Executive of Oldham County; every Holder of this Covenant; each person who is in possession of the Property; each person who holds a recorded interest in the Property; and each person who signed this Covenant.

O. Cabinet and Division References. All references to the Kentucky Environmental and Public Protection Cabinet and the Kentucky Division of Waste Management shall include successor agencies/departments/divisions or other successor entities.

Grantor has caused this Environmental Covenant to be executed pursuant to KRS 224.80-100 to KRS 224.80-210 on this 14 day of DECEMBER, 2007.

IN TESTIMONY WHEREOF, the parties have hereunto set their hands this the day and year first above written.

ATTACHMENT A

LEGAL DESCRIPTION

1. Deed Book 94, Page 439

BEGINNING at an iron pipe at a corner post in the east right-of-way line of Kentucky Highway No. 362, formerly Pewee Valley & Flat Rock Road, said iron pipe being the Northwest corner of the Ed Hall farm and being the Southwest corner of the W. M. Gill Tract as recorded in Deed Book 70, Page 52 in the Oldham County Court Clerk's office; thence with the right-of-way line North 29 degrees 05 minutes West 146.5 feet to a point in the entrance road; thence passing a gate post at 36.0 feet, North 85 degrees 15 minutes East 215.0 feet to an iron pipe at a fence post; thence continuing with the remaining lands of Gill North 59 degrees 45 minutes East 110.0 feet to an iron pipe at a fence post at the East side of a gate; thence North 47 degrees 30 minutes East 153.5 feet to an iron pipe at a fence post; thence North 55 degrees 10 minutes East 93.0 feet to an iron pipe at a fence post; thence North 76 degrees 20 minutes East 132.0 feet to an iron pipe at a fence post; thence North 69 degrees 30 minutes East 100.0 feet to an iron pipe at a fence post; thence North 28 degrees 30 minutes East 573.5 feet to an iron pipe at the West post of a gap in the fence; thence North 07 degrees 15 minutes East 266.5 feet to an iron pipe at a fence post; thence North 20 degrees 25 minutes East 199.0 feet to an iron pipe at a fence post in a branch; thence with said branch North 56 degrees 35 minutes West 309.0 feet to a railroad spike in a 12 inch hackberry; then with an existing fence North 28 degrees 38 minutes East 733.0 feet to an iron pipe at a corner post in the line with W. M. Gill, said fence being a portion of the Northwest line of the Price Tract as recorded in Deed Book 60, Page 295; thence along an existing fence South 64 degrees 45 minutes East 178.0 feet to a 30 inch sugar tree at the brow of the bluff, being a corner with Jack Ott; thence continuing over the bluff South 64 degrees 45 minutes East 102.0 feet to a 10 inch walnut; thence North 89 degrees 15 minutes East 153.0 feet to a point in the center of Floyds Fork, having passed an iron pipe at 30.0 feet; thence continuing downstream with Floyds Fork South 01 degrees 52 minutes West 105.0 feet to a point in the center of the stream; thence with the center of the stream South 13 degrees 05 minutes East 300.0 feet to a point; thence South 19 degrees 35 minutes East 307.0 feet to a point; thence South 17 degrees 09 minutes East 360.0 feet to a point; thence South 23 degrees and 15 minutes East 485 feet to a point in the center of Floyds Fork, being the Northeast corner of the Ed Hall farm; thence along a fence with Hall, passing an iron pipe at 60.0 feet, South 71 degrees 30 minutes West 787.0 feet to a fence post; thence South 72 degrees 30 minutes West 1270.0 feet to the beginning; containing 35.90 acres more or less, and being South end of the Allender Place formerly owned by Gill as recorded in Deed Book 70, Page 52, and being the Southeast end of the Price Tract formerly owned by Gill as recorded in Deed Book 89, Page 229, in the Oldham County Court Clerk's office.

BEING the same property conveyed to Guy L. Redmon, Jr. and Chris P. Pennington, doing business as the Red-Penn Sanitation Company by deed from W. M. Gill and Frances L. Gill,

his wife, dated March 1, 1962, and recorded in Deed Book 92, Page 571 in the office of the Clerk of the County Court of Oldham County, Kentucky.

2. Deed Book 99, Page 56

Tract 1. Beginning at a point under the bridge in the middle of Floyds Fork Creek and running thence with the East right-of-way line of Kentucky Highway 362 North 24 degrees 30 minutes West 359 feet to an iron pipe for corner with the land of Redmon and Pennington; thence with the land of Redmon and Pennington North 72 degrees 30 minutes East 1270 feet to a point and North 71 degrees 30 minutes East 787 feet to a 20-inch sycamore corner to Kentucky Women's Prison property; thence South 22 degrees East 440 feet to a 22-inch sycamore; thence South 11 degrees 30 minutes East 210 feet to an 18-inch elm; thence South 19 degrees 15 minutes West 170 feet to a 4-inch elm; thence South 83 degrees 30 minutes West 207 feet to a 6-inch maple; thence North 66 degrees West 143 feet to a 15-inch ash; thence North 86 degrees 45 minutes West 195 feet to corner with said prison property; thence continuing with said prison property South 3 degrees 30 minutes East 222 feet to a 10-inch walnut; thence South 11 degrees West 116 feet to a corner post in the north right-of-way line of Kentucky Highway 362; thence with said right-of-way line as follows: South 85 degrees 30 minutes West 395 feet to a spike, South 54 degrees West 181.5 feet to a spike, South 75 degrees 15 minutes West 181.5 feet to a spike, North 83 degrees 45 minutes West 247 feet to a spike, South 63 degrees 30 minutes West 90 feet to a spike, South 86 degrees West 160 feet to a point, North 53 degrees 30 minutes West 155 feet to a point, North 20 degrees West 235 feet to the center of Floyds Fork Creek at the point of beginning containing 36 acres, more or less.

And being the same property conveyed to Ed Hall and Bettie Hall, his wife, (also known as Bettie Elizabeth Hall) in joint survivorship by H. Elliott Netherton and wife, by deed dated July 3, 1945, and recorded in Deed Book 65, page 351, in the office of the County Court Clerk of Oldham County, Kentucky, and the same of which Bettie Elizabeth Hall became the sole owner upon the death of Ed Hall on November 27, 1952; and the same which Charles Hall was directed to sell under the will of Bettie Elizabeth Hall, dated March 12, 1958, and recorded in Will Book 12, page 317, in the office of the clerk aforesaid.

Tract 2. Beginning in the southwest right-of-way of Kentucky Highway 362 at a point opposite the northwest corner of the tract conveyed to Ed Hall and Bettie Hall, his wife, (Tract 1 above) and near a 15-inch elm; thence South 3 degrees West 215 feet to a point in the branch; thence South 44 degrees 30 minutes East 150 feet to a point in the center of Floyds Fork Creek; thence with the center of said creek North 63 degrees East 60 feet to the southwest line of Kentucky Highway 362; thence with the southwest line of said highway North 24 degrees 30 minutes West 340 feet to the point of beginning.

And being a tract of land claimed and held in open, notorious, adverse possession by Ed Hall and Bettie Hall, (also known as Bettie Elizabeth Hall) for more than 40 years.

3. Deed Book 99, Page 381

Beginning at a spike in the east right-of-way line of Highway No. 362 common to the property now owned by the Red-Penn Sanitation Co.; thence running with the property lines of the Red-Penn Sanitation Co. North 85 degrees 15 minutes East 215 feet; North 59 degrees 45 minutes East 110 feet; North 47 degrees 30 minutes East 153.5 feet; North 55 degrees 10 minutes East 93 feet; North 76 degrees 20 minutes East 132 feet; North 69 degrees 30 minutes East 100 feet; North 28 degrees 30 minutes East 573.5 feet; North 7 degrees 15 minutes East 266.5 feet; North 20 degrees 25 minutes East 199 feet; North 56 degrees 35 minutes West 309 feet to the remaining land of W.M. Gill; thence with the remaining land of W.M. Gill South 28 degrees 38 minutes West 1275.5 feet to a spike in a 22 inch hickory tree; thence South 65 degrees 30 minutes West approximately 325 feet to the east right-of-way line of State Highway No. 362; thence with the east right-of-way line of Kentucky Highway No. 362 in a southwardly direction to the point of beginning a distance of 175 feet, and being a tract of land containing approximately 12 ½ acres, more or less.

And being a part of the same land conveyed W.M. Gill by deed recorded in Deed Book 60, page 295, and known as the Price Tract, and a part of the land conveyed W.M. Gill by deed recorded in Deed Book 70, page 52, known as the Allender Tract, all in the Oldham County Court Clerk's office.

4. Deed Book 118, Page 422

Beginning at an iron pipe in the easterly line of Hawley-Gibson Road being corner with William Lee Gill; thence with the line of William Lee Gill south 68 degrees and 05 minutes east 1,374.0 feet to an iron pipe at a corner post with Red-Penn Sanitation Co.; thence with the line of the Red-Penn Sanitation Co. south 28 degrees and 38 minutes west 2,257 feet to a stake; thence south 48 degrees and 30 minutes west 124.0 feet to an iron pipe at a corner post on the easterly side of Kentucky Highway No. 362; thence with the easterly right-of-way line of Kentucky Highway No. 362 north 40 degrees and 20 minutes west 300.0 feet to an iron pipe; thence north 40 degrees and 45 minutes west 150.0 feet to an iron pipe; thence north 20 degrees and 45 minutes west 100.0 feet to an iron pipe; thence north 04 degrees and 45 minutes west 435.0 feet to an iron pipe; thence north 17 degrees and 15 minutes west 415.0 feet to an iron pipe; thence north 19 degrees and 40 minutes west 345.0 feet to an iron pipe at a corner post at the intersection with the easterly line of the Hawley-Gibson Road; thence with the eastern line of the road north 48 degrees and 00 minutes east 196.0 feet to a railroad spike in a 12 inch cedar; thence north 33 degrees and 40 minutes east 184.0 feet to a point; thence north 37 degrees and 10 minutes east 200.0 feet to a point; thence north 47 degrees and 45 minutes east 93.0 feet to a 30 inch cherry; thence north 48 degrees and 30 minutes east 412.0 feet in all, having passed an 8 inch walnut at 5.5 feet, to the beginning, containing 66.35 acres more or less.

Being the last remaining part of the same property conveyed to W.M. Gill by Deed dated the _____ day of _____, 19__, and recorded in Deed Book 70, Page 52, in the office of the Clerk of the County Court of Oldham County, Kentucky; the said W.M. Gill died on May 14,

1967, and Frances L. Gill, the party of the first part acquired her interest under the Will of said W.M. Gill, which is recorded in Will Book 13, Page 177, in the aforesaid Clerk's office.

LEGAL DESCRIPTION
FOR
JOHN G. GUELDA

OLDHAM COUNTY
R10 PG 227

This description is not for recording, there is no road frontage and only describes landfill area:

A certain tract of land in Oldham County, Kentucky, and being more particularly described as follows:

Unless otherwise stated, any monument referred to herein as an "iron pin" is a set 18" No. 4 rebar capped W.H.B., LPLS 221. All bearings stated herein are referred to the magnetic meridian as observed 05-24-2002 along the west side of Tract A in Deed Book 158, Page 309, in Shelby County, Kentucky.

BEGINNING at an iron pin, completely within the boundaries of property recorded in Deed Book 158, Page 309, said iron pin is **N 25° 29' 02" 203.85 feet** from the intersection of the east right-of-way of Kentucky Highway 362 and Floyds Fork Creek, said point is corner to Red-Penn Sanitation property and Angela K. & Terry Gagel Jr., Deed Book 349, Page 374; **Thence N 30° 36' 33" W 342.87 feet** to an iron pin; **Thence N 10° 57' 08" E 291.24 feet** to an iron pin; **Thence N 31° 37' 50" W 250.45 feet** to an iron pin; **N 39° 36' 57" E 267.61 feet** to an iron pin; **Thence N 25° 24' 06" E 293.30 feet** to an iron pin; **Thence N 28° 37' 06" E 1,031.99 feet** to an iron pin; **Thence S 59° 27' 58" E 252.44 feet** to an iron pin; **Thence S 36° 03' 57" E 120.71 feet** to an iron pin; **Thence S 19° 02' 11" E 314.76 feet** to an iron pin; **Thence S 10° 17' 08" E 112.57 feet** to an iron pin; **Thence S 21° 21' 23" E 334.45 feet** to an iron pin; **Thence S 47° 54' 27" E 182.79 feet** to an iron pin; **Thence S 02° 28' 15" E 93.80 feet** to an iron pin; **Thence S 24° 31' 17" E 537.76 feet** to an iron pin; **Thence S 11° 09' 05" E 175.87 feet** to an iron pin; **Thence S 36° 48' 06" W 244.18 feet** to an iron pin; **Thence N 86° 44' 45" W 103.58 feet** to an iron pin; **Thence N 35° 56' 41" W 69.01 feet** to an iron pin; **Thence S 76° 35' 11" W 475.01 feet** to an iron pin; **Thence S 81° 47' 08" W 725.28 feet** to the point-of-beginning, containing **50.844 Acres** as surveyed by W.H.Brown of W.H.Brown & Associates on 07-17-2006 and being part of the same property conveyed to Red-Penn Sanitation Co. Inc. by Bettie Elizabeth Hall Estate by deed dated 07-24-1964 and recorded in Deed Book 158, Page 309, in the records of Shelby County, Kentucky.

I HEREBY CERTIFY THAT THIS DESCRIPTION WAS MADE UNDER MY PERSONAL DIRECTION AND THAT THE ANGULAR AND LINEAR MEASUREMENTS, AS WITNESSED BY THE MONUMENTS DESCRIBED ABOVE, ARE TRUE AND CORRECT TO THE BEST OF MY KNOWLEDGE AND BELIEF. THIS DESCRIPTION IS SUBJECT TO EASEMENTS APPARENT AND OF RECORD AND IS VALID ONLY TO THE ORIGINAL CLIENT WITH LIABILITY LIMITED TO THE COST OF THE ORIGINAL SURVEY PLUS SURVEYING, LEGAL AND RECORDING COSTS FOR ANY DEEDS OF CORRECTION, IF NEEDED.
