Subject: Former Westinghouse Facility Compton, CA - Draft PCB Cleanup Approach

Hello Russ and Dave,

I very much appreciate your patience with my limited availability to be able to circle back with you on the draft PCB remediation approach for the former Westinghouse facility in Compton, California.

Thank you for submitting the very well written draft PCB cleanup approach. We have a call scheduled for May 2, 2018 from 10:30 am to 12 pm San Francisco time to explore the approach together. As soon as I get an EPA conference call line, I will send the call-in number and code.

Below, I list those points in the draft PCB cleanup approach of interest to me for our call on May 2, 2018. A few figures would had been helpful to better visualize certain aspects of the proposed cleanup approach.

1. Entire draft PCB cleanup approach - Big picture summary of each component in your proposal

2. Table summarizing decision units and whether remediation will be performed – Go over this table as part of Item 1 above

3. PCB concentration to be used in ProUCL calculations for area(s) when a portion of the slab is removed - What PCB concentration are you considering to propose?

4. Replacement of specific concrete slab portions - Cap concept; soil sampling directly beneath the slab removal area before "capping"

5. HVAC system – Go over concepts here and have further dialogue

6. Institutional controls – Further dialogue

7. Best management practices (BMPs) and air sampling - Not included in draft cleanup approach, go over BMPs

8. EPA's determination of no unreasonable risk of injury to health or the environment

Regarding the proposed schedule:

- Yes, biweekly calls are a good idea, we can try the proposed call-in schedule and see how that works
- Dates for submission of draft and final PCB cleanup application – Explore during the call to ensure those dates are still doable I

Thank you for your courtesies. I look forward to our May 2, 2018 call.

Best,
Carmen D. Santos
