As long as the material is compatible with the shipping container, it works for us.

The packaging spec says we can accept up to 400 pounds of material per drum, then wet with oil

Thanks for checking.

Hello Loraine

Are you able to accept the following profile 92796-1 in 55 gal metal drums?

Thanks

Eric Feist

Subject:	WTI released emails showing repack was known
Attachments:	EmailsRepacking5.jpg; EmailsRepacking.jpg; EmailsRepacking1.jpg; EmailsRepacking2.jpg; EmailsRepacking3.jpg; EmailsRepacking4.jpg

I asked WTI this am whether they would release any email or documentation that shows Veolia (the broker) and WahChange were aware that WTI would be repacking the material if it was shipped in greater than the 400 lb charges specified.

WTI provided the emails which I have then attached to my email. There are six pages (EmailsRepacking, Repacking1, 2, 3, 4, 5).

I numbered the pages 1 through 6 in the upper right corners, and added the highlighting and comments.

Pages 1 and 2 are in regards to shipping the material that was involved in the 12/17/2011 incident.

Pages 3 and 4 indicate the broker Veolia (Eric Feist) knew repacking at WTI was involved.

Page 5 involves Frank Hamilton of ATI, the paragraph regarding the "40 drums in old 55 gallon barrels" that need overpacked or repacked.

Page 6 shows the comment for 400 lb max.
