SUMMARY OF COMMUNICATION

The only field documented evidence of floating product on the West side of the Burlington property is in the Harding-Lawson report regarding tank removal there. A well placed upgradient of the tank (a product tank) had several inches of floating product, believed to be diesel.

In addition, in a personal communication Mr. Hotchkiss had with a Burlington employee was that there was floating product in the trenched foundation of the City Ice building when they were building it. This product in the trenches would have been there despite City Ice geotechnical reports which claim that the foundation would exist several feet above the ~~over~~ ~~in~~ depth at which they had some air detections of organics. The City Ice geotech. studies did not find any floating product.
