Project Clarification of "K061" category

Discussed Mike explained that a "foundry" casts steel into useable parts such as nuts and bolts and railcar parts, as opposed to sheet metal or ingots.
This definition helps to clarify the memo from Alan Corson of EPA (dated July 11 1983) and titled "Scope of the Listing K061, Emission Control Dust/Sludge from the Primary Production of Steel in Electric Furnaces".
Mike believes that EPA headquarters may reinstate K062 (i.e. foundry baghouse dust) when they get a chance to (time-wise).
K061 does not apply to foundries.
