TO: David Doyle, ARWM/AWCM

FROM: Art Groner, MDNR

DATE: 9/8/82

TIME: 8:20

SUBJECT: Returning Sanderson's phone call to Bedon of 9/7/82

SUMMARY OF COMMUNICATION

I told Art that we were concerned about MDNR's handling of the Litton ACD case. I mentioned that we wanted to have Litton put in groundwater monitoring wells prior to closing their surface impoundment to monitor for TCE but it is too late to do that now since the lagoon is about to be closed. Art said that MDNR had Litton monitoring the lagoon and the influent into the lagoon for TCE. The last results from this monitoring ~~should~~ showed no TCE in lagoon or being sent there. MDNR does not feel that groundwater monitoring is now warranted.

I asked him what the status is on their suit against Litton. He said that they are going "full speed ahead" with it. Are including penalties for all part violations including lack of groundwater monitoring. He said that they took samples of sludge at the bottom of the lagoon and did not fail EP Toxicity for any metals but did have "high" levels of ~~[illegible]~~ nickel. Could not remember exact concentration.
