~~Tom~~ / File (Norplex) 3-18-91

John Vetter, IDNR, called about ~~not~~ the Norplex Facility. Apparently, there is a lot of contamination at this facility.

John wanted to know if RCRA required cleanup of hazardous substance (product) tanks. I told him that unless the facility was a TSD (explaining >90 day storage, etc), RCRA would not require cleanup, that it should be conducted under the UST or CERCLA programs. I did tell him that the waste generated by UST or CERCLA cleanups could be RCRA regulated and would have to be managed as such, in tanks or containers and not in piles
