RECORD OF COMMUNICATION	☒ PHONE CALL ☐ DISCUSSION ☐ FIELD TRIP ☐ CONFERENCE ☐ OTHER (SPECIFY) (Record of item checked above)	
TO: Paul Merbanger MDNR	FROM: David Doyle ARWM/AWCM	DATE 3/8/82 TIME 9:05

SUBJECT: Lutton Advanced Circuitry - Springfield, Missouri

SUMMARY OF COMMUNICATION

I asked Paul whether Lutton had connected unit the Springfield sanitary sewer yet. He said they were hooked-up but were not sending all of the electroplating wastewater to the system yet. Didn't want to hull all the bugs in the STP. Will send all wastewater to STP by 2/4/82.

I asked Paul what the results were of the trichloroethylene sampling requested by MDNR. Paul said that the concentrations of trichloroethylene in the monitoring wells, clarifier and lagoons had decreased but was still evident. 2/5/82 - Clarifier 24.3 ppb, West Well - 30 ppb, sewage lagoon - 12 ppb, Pond A - 0.78 ppb, East Well - 3 ppb.

Paul believes that the organics found earlier are from Lutton. Gradient to N.W. - have higher concentrations in West Well.
