Dave:
And here is my presentation (draft), which serves as the lead-in to Chris'. Mine is as dry as a dry period in the 'whiplash' regime of our future climate condition. But, it may serve the purpose to set up a lively discussion. I agree with Chris on benefit of a quick call. I have good availability early next week.
Thanks,
dr

Hi Dave,

Attached are my slides for the second half of Panel #2. I had a chance to catch up with Dominic yesterday and got some good feedback that I tried to incorporate into the presentation. I like, but don't love, how it came together. I think it would benefit the session if we could have a quick call (perhaps next week) to run through the approach to the panel. I have availability any day next week except Thursday and Friday. Please let me know what you think.

Thanks,

Chris

Sounds right on target. Am cc'ng Matt, Dominic and Chris from the next panel to provide an idea on how you are working together on this. Pls call or write if you want more feedback from me on how to prepare for this. Remember if you do PPTs we will need them in advance. We can also discuss maybe Tuesday at the meeting if we need last minute coordination. Part of me just wants to unleash you guys to do your thing (;^))
Tx
Dave

Scott and Dave – your direction is consistent with the discussion Drew and I are having. He is going to highlight his five favorite recommendations from the report or variations thereof from the California municipality perspective, and I will do the same from the California permitting authority perspective, with some overlap of our favorites.

Tom and Drew:
I spoke with David Smith this am to get some more clarity on how he would like to see the CASQA Panel No. 1 go. Overall, you each have a lot of license to use as you see fit. Specifically, here is some guidance for your 10 min primers:

1. Drew: Focus on the local program perspective. Considering the findings from the Workshop, what can and should the local programs change to get a higher return on investment for the stormwater program. David said, 'if you are king, what would you change'
2. Tom: Focus on the permitting authority perspective – what can the permitting authority do to refine/change the permit to improve program performance.

David will start with the workshop goals and the big picture description of the Workshop, followed by Drew then Tom. Should be at about 35 mins at this point all preceded by a 5 min intro from me.

The bulk of the session is (55 mins of a total 90 mins) should be a dialogue with the audience. I will help prime that process with the following broad questions:

1. What did we miss?
2. What do you want out of this process?
3. What is not working or just broken?
4. What is working and should be pushed along?

The idea here is to vet the content we came up with in the Workshop with the people in the room, and see if there are any additional worthy ideas.

I will arrive Tuesday AM at the Confernece if you guys want to get together sometime during the day to coordinate further, or let me know if you would like a call prior to and I can set that up.

Thanks
