Juan Fajardo asked me to assist you in your file review.

If you would like to come to our Records Center (290 Broadway, 18th floor, NY, NY) to review hard copy files, you may make an appointment by e-mailing Julie Wong of Ensoftek Inc. (contractor who runs the Records Center for EPA) at wong.julie@epa.gov and cc:'ing me. However, since the Diamond Alkali Superfund site files are voluminous, you will need to narrow your request down by using the attached Site File Inventory. If you identify documents during your review that you would like copies of, you will need to file of Freedom of Information Act (FOIA) request for them. It might expedite things if you filed a FOIA request before coming in to the Records Center -- you may say that you are requesting PRP information or technical information for the Diamond Alkali Superfund Site to be identified during a file review at the Records Center.

In addition, almost all of the files in Section 8.0 General Enforcement have been scanned into a database. The attached spreadsheet lists the documents in the database. If you are interested in receiving copies of those documents, please file a FOIA request.

Please let me know if you have any questions at 212-637-4427 (or e-mail works).

Alice Yeh

Subject: Fw: Diamond Alkali Superfund Site: Okonite as a Potentially Responsible Party

Mr. Fajardo:

Thank you for taking the time to discuss the ongoing work on the Diamond Alkali Superfund Site by the EPA. As we discussed, my firm, McCullough Ginsberg Montano & Partners LLP will be representing the Okonite Company in this matter and one of the ways that I will be able to better understand the issues will be to examine the files/records that EPA has developed for the site and for Okonite as a Potentially Responsible Party. I would appreciate the opportunity to review these records and If you are able, could you provide me with a contact person who I can reach in order to arrange a time to review these files. I realize that the entire file for the site may be large, so I would like to initially inquire about reviewing the Okonite file first, if possible.

Thank you for your assistance,

David Brook
